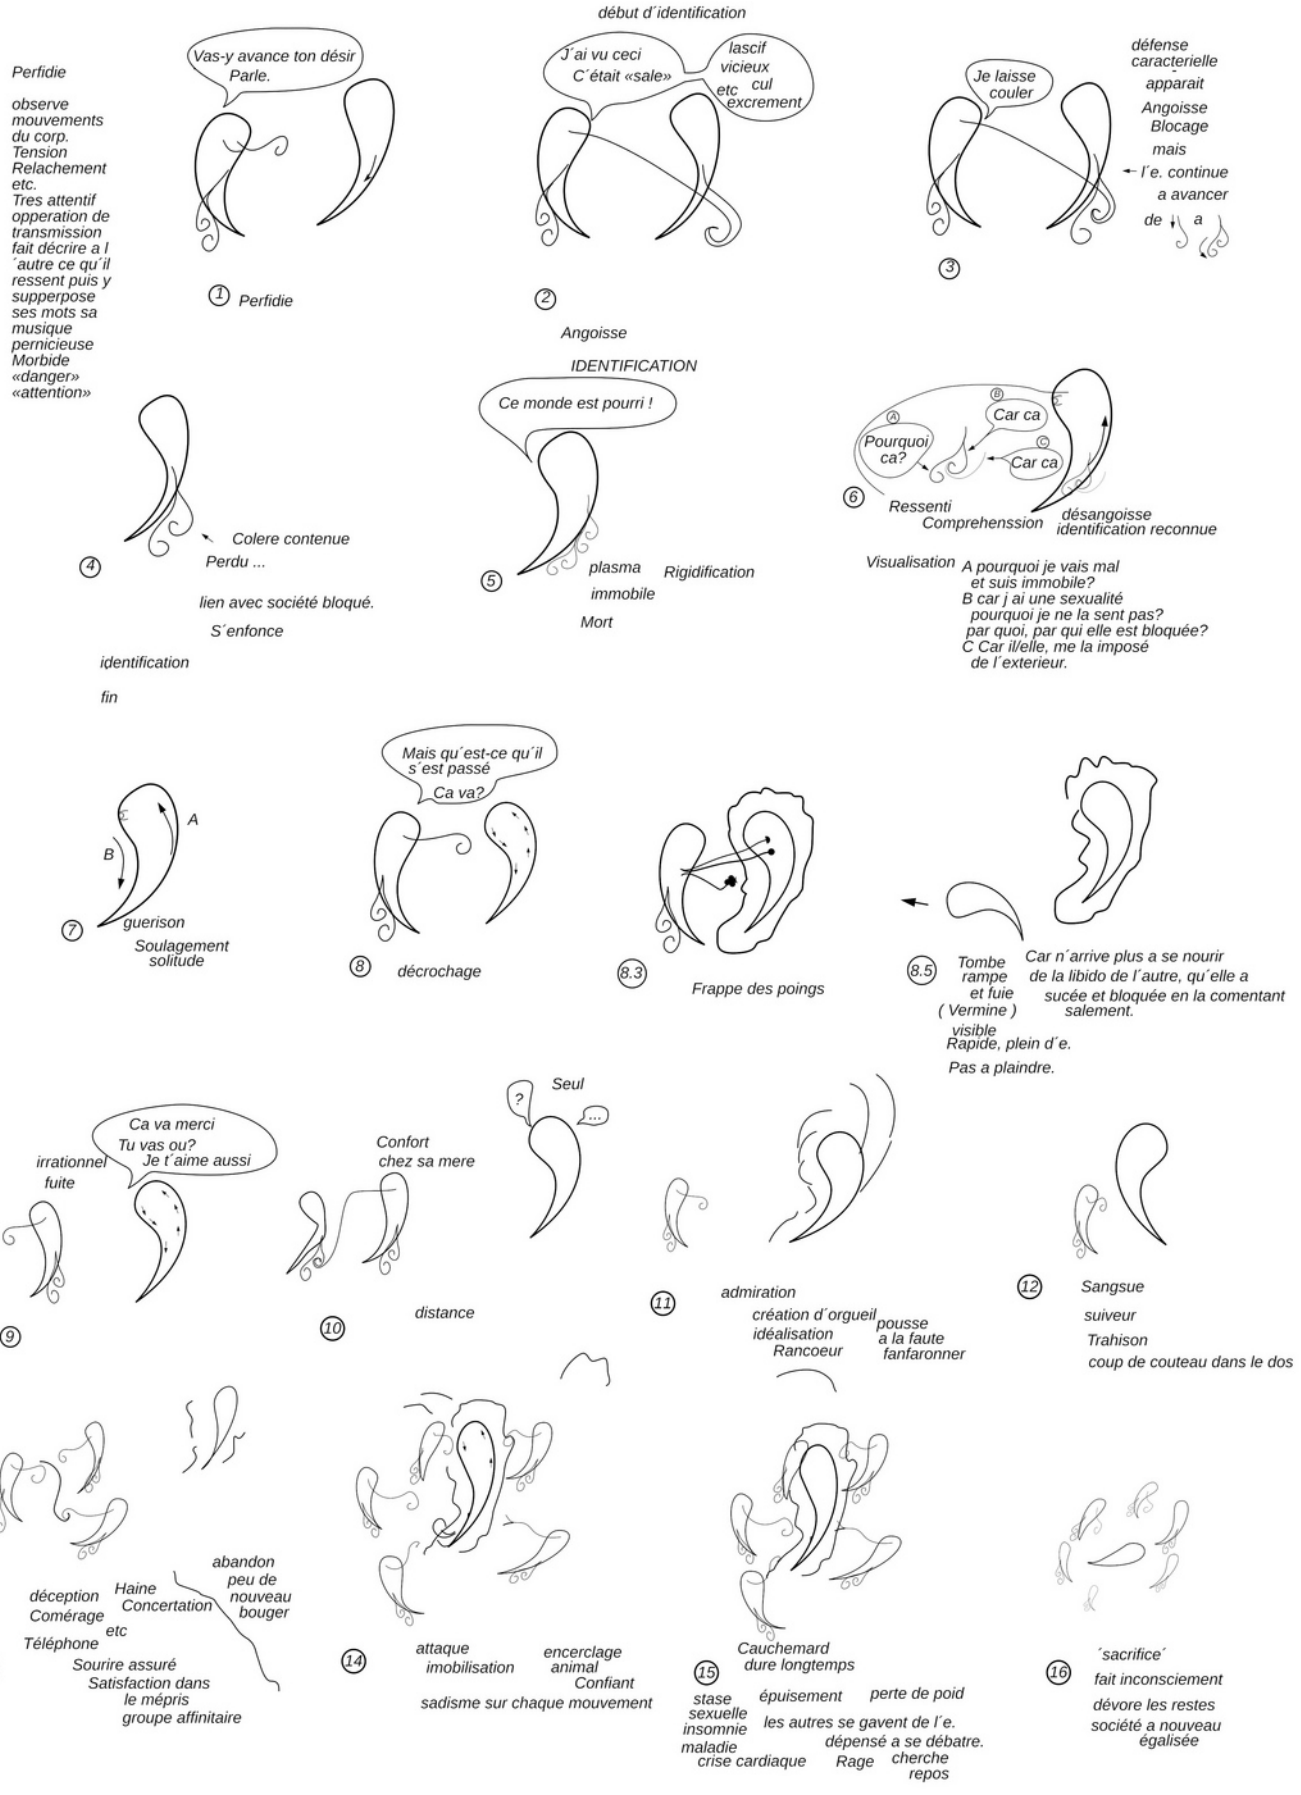
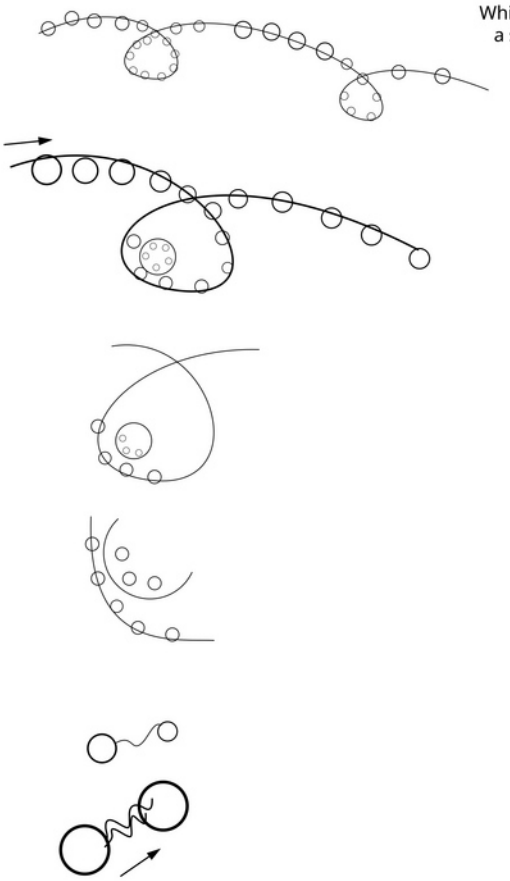
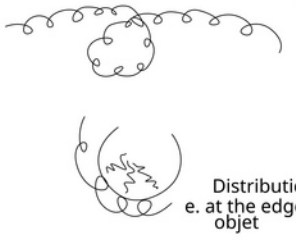
BD Culpabilité



Saucer Studies
simple



In each current there are
particles, we can hear it
with a radio, E balls,
Which move in the KRW
a saucer has ports
that come into contact
with these balls
and the wheel turns
manually. each port
recharges or discharges
at each contact
as it where attracted.
To run the wheel,
a current in the internal
discharge or recharge each
port and automatically
each port calls a ball
of E. from a current, to
stick to it.
Good settings and wheel
turns. Each port
connected has an battery for
for general quantity of E. of
the object, elevation, ratio
gravitation ?
Or the displacement
in the KRW is perhaps
Peut étre puisqu´ellesufficient since it
is already a certain
elevation. Then
Then just be able
to change of KRW
attracted, reject guiding
a mat.
To see them, MAP
all the time, currents
horizontal to the star
and more or less verticals,
general currents more
distant.



These balls are KRW smaller
Concentration points
R. discovered the distances of them, measurements
(with pendulum)
kept them I believe in any case
loved them very much.
Plate or ball,
,of orientation, distribution
and supplied by E.
Lacks plasma ball
Matter in the inside no
containing . Meca
Distribution
e. at the edge of

= Translation

Because she has the impression of fighting against the mother (in truth against the father, the desire for incest, efficiency, etc.)
Because he has the impression of fighting against the dad (authority) (in truth, against the desire for incest with the mother, softness, etc.)

make him fight against the mother, he won't want to.
he fashioned a world of hypocritical sweetness,
feminine value

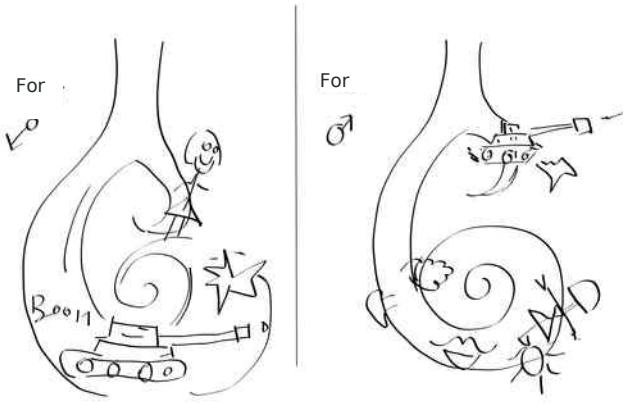
(gentle being)
♂
(identification)

because he has the impression of fighting against softness with war.
when in fact he is fighting war with softness
show him that he is fighting war with softness
That, he won't want, and will take the war
which will lead to softness (after aggressiveness) (passivity after aggressiveness)

(hard Being)
♀
(war = aggressivity)

because she has the impression of fighting the war with softness.r.
when in fact she fights sweetness with war
show her that she is fighting softness with war
That, she won't want, and will take the sweetness
which will lead to war (after passivity) (aggressiveness after passivity)

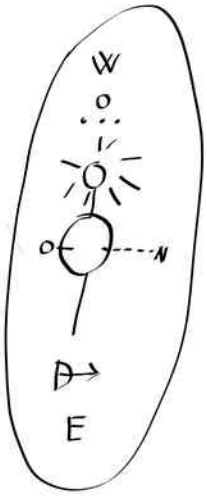
essay



AE

It is about of finding at which moment the two currents, the galactic and that of the Earth, oppose each other, or else go in the same direction

In other words, if, depending on the phenomena observed, winds, rain, sun, clouds etc., we can find at what time the quantity of e. is the greatest or the weakest, the most moving or inert, in order to ultimately determine in which direction the Galactic flow goes
between Sagittarius and Orion

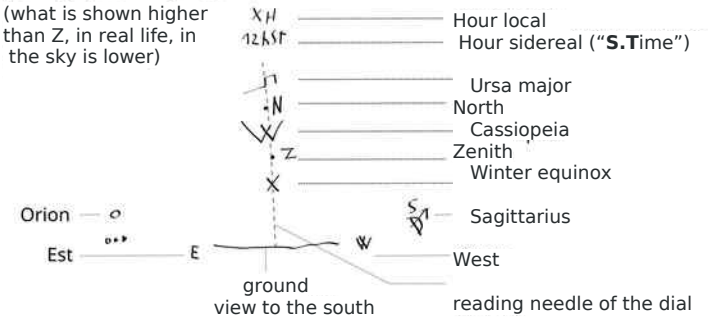


The sidereal day is ~4 minutes shorter than solar time.
(The two hours again correspond to the winter equinox.)
The sun, like the celestial bodies in its system, moves more slowly than the diurnal movement of the stars.
Every year the same apparent position.
In January the Sun is visible in the constellation Sagittarius. In July the Sun is visible in Orion.

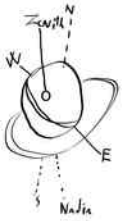
Field of view

Representation of "Field"

(what is shown higher than Z, in real life, in the sky is lower)

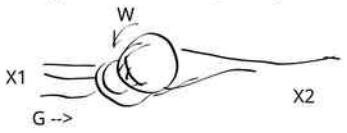


Representation planetary



O = observer

Representation galactic flow



G = galactic current
W = earth current coming from west
X = constellation/sidereal time

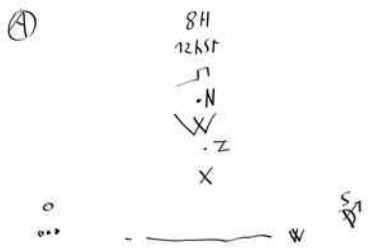
Local meridian;
Longitude;~1.44°E
Latitude;+~40°

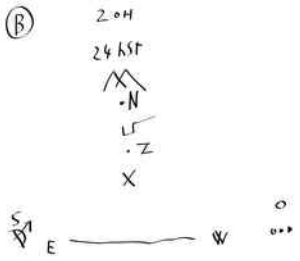
Hypothesis

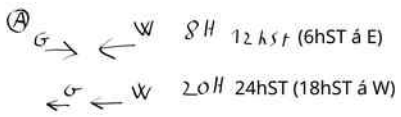
The 23 May 2023

at 8 p.m. there will be a bulge that begins, attracts to the E + rain dense cloud

at 8 a.m. there will be a depression that begins, attracts to the W + clearing







at 12hST facing south, at tht west, removing 6h (a quarter of 24h, it is 6hST.
One can observe in the west the constellation of Sagittarius.
in the East there is Orion rising.
exactly opposite with respect to the celestial meridian of the winter equinox.

Observation (logs.).

23 May 2023

~19h30 small gusts E-→W and W-→E , birds twirl, twist N-E-→S-W Raptor against dove following each other. Clear weather, gray cloud in the distance, slow gradient. Heavy weather a bit, light spirit, little pressure. Full gaze, calm, people outside.
20h-5 Current of the Earth returns after depression, empty, we see it
20h15 timid small gusts spaced of 2 minutes apart, medium clouds, large, cool well formed Humid without humidity, smells the sea, light happy mood rises.
gusts. less spaced, of W
20h35 bulges clouds visible E, about ten
stopped wind ~22h

Conclusion

Conclusion: it was the opposite i.e.

at 8 p.m. there will be a depression that begins, attracts to the W + clearing

at 8 a.m. there will be a bulge that begins, attracts to the E + rain dense cloud

Conclusion: the current goes from Orion to X

Conclusion with facts;

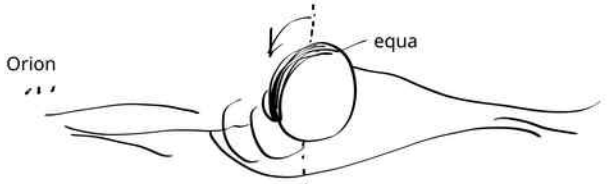
Orion passed overhead at 14h
meridian face to current, it got very charged.
Later, the same in the West.
"Orion continues his run"
Then, from it we received the clouds and the rain, concentration in the distance in West brought by current of W-→E of he earth that took over again.
galactic concentration, bulge build-up with the e. of the earth

Observations (logs.) Following

24 May 2023 8h30 cloudy white, fresh, pigeon coo. pleasant awakening early
~14h Always white clouds, full cover, nebula, spark ++
16h(8hST, Orion a little to the right of the meridian) Always cloudy flat white cover.
17h ⊙ Look at ...Orion to see if there is still cloud or that something comes from it. A comes from it, steps slow, calm glance, says hello to ⊙ from head from afar D next to
~17h40 small wind cloud well made from W coming, 2,3
~19h43 Thunders hears, a little clouds at distance *3 at W
~19h50 wind from W,SW 12h05ST ...O Galactic
~20h15 Orion falls asleep, Virgin runs, birth etc. rain almost rain without clouds because it is not very visible, big drops, spaced, torrent (Edge tube) "Have you seen the Virgin?" ⊙ "yes"
~21h a little less, rain stopped. Then lightning far at W, 1,2, Thunder
~23h lightnings soundless

25 May 2023 00h ~01h ~02h silence visual, auditory.

Meridian of the earth arrives here
here white cover, calm starts, no wind, charge starting.
at 00h sidereal time, 06hST at the East,
Cassiopeia in front

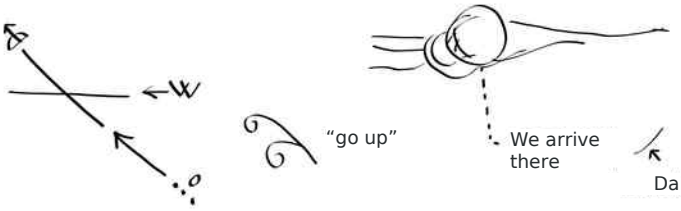


Meridian
arrive there, relaxation
The clouds formed in the bulge
in front of the galactic current, the current of the Earth W-->E are relaxed and follow again
Sudden relaxation, discharge, heavy rain thunderbolt brightly lightning.

28 May 2023 ~18h45,11hST Wind e-→W, Orion at 2h to the right, (H in 12h)
20h05 (12h20ST) (Constant local time – 7h36ST) thunder W far away 5-7 seconds
No lightning, thunder, rain the precedent days since the 24 May 23, Orion sets since 25 min *2-3-4 Thunder
20h30 air current from SW when looking at the meridian at 12h south and equator

03-8 June 2023 ~18h20 thunder afar *1
~19h10 many more other thunder afar W

17 June 2023 ~18h20 thunder
20h20 it will be 12hST ...Orion with W aligned
8h20 it will be 24hST



(I see that they are les there the 62°, we dive below)

---

errata

Sidereal time constant deduction

+2 -6h50ST ..+2, correction because UTC+2 =-8h50 (it is 5h05 = 20h15ST)
thunders were triggered 2h early the exact alignment of Orion and current of Earth
Place of observation almost on the meridian. Universal Time, 1.44° longitude but UTC+2 because summer time... hour of +30° E ...
Exit from the bulge 2h later
It was not at 19h,20h, it was at 21,22h.
So gets heard before it happens.

4 different hours
headache ...

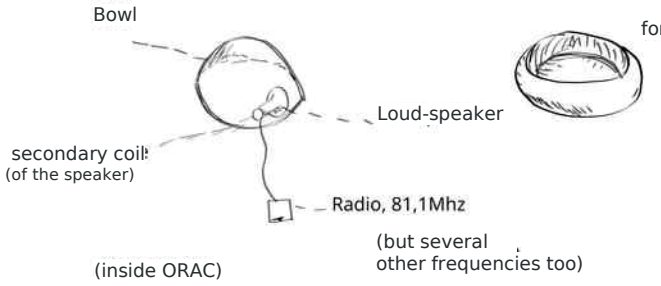
Exp. in resonance

A bowl of steel on a loud-speaker connected to a radio
"in resonance" has entered



remove the bowl, the effect ceases after three to four particles
(abruptly (after this fairly long period of time)

(note; the power supply of the LoudSpeaker makes
everything to stop. Connected directly on radio it
works.)
(edit, same effect a day of great sun without ORAC)

Synthesis

A metal bell put on the Loud-Speaker and a radio.The antenna is next to it. If I keep it away, the effect stops.
The Medium Radio is turning in the bell, "imprisoned" and repeated by the coil of the Loud-Speaker. (edit: one/several impulse/s of medium radio; "particle".)

1; It captures the particles well.

2; A buckle was created inside, took a while to draw, generate ∞ with coil. Heard with the membrane Loud-Speaker. The metal resonated. No motion.

3; Correspondence between the sound and the frequency in Hertz. What I listen to is the Hertz, what I give is sound. Putting in abyss, what runs under bell is the Hertz, and I listen it with sound.
ex equo
(the radio had no micro. so we can put in rotation the Hertz – a frequency.

LG

A plant, when it stops growing vertically, no longer being able to,
evolves in growing horizontally,
It makes the animal world

The stems, petiolary merithals, the canals, the branches, the roots, etc. , become gigantic, their membrane becomes less than solid, so flexible, to be able to develop, that their skin is less visible, hard, refractory in light, than that of a green plant surface, than a bark. But it remains a bark, of energy as intense as possible, given the size, which covers the planet, perhaps. What we call animals, which move more or less, do it in it, in its cambium, or the various Medules, or with it. Fauna is a variety of flora, this rhizome, dragoenaen, contains it.

Hypothesis: It is happy, it seems, when an animal within it, with its eyes, its intellect, with difficulty, becomes aware of it.

The missing link was ants, hives, network mushrooms; At the same time an global individual and particular individual. The global functioning unitament, as well as the individual, extending, contracting.

So great that the flora itself that we will perceive is made by this fauna which is the real flora.

AE Tibesti - Tahiti

Saharasia
Tibesti, Air

Tahiti
Trobriand Islands

´´ Why are the 62 °, the Galactic current effects would always be done at the same places on Earth? ´´ Is it always inclined in the same way, still at the same places? AE djeleas says that no, that Earth moves in relation to him, but drawings from R. and research on frequencies and locations of cyclones, show that there is something that is fixed/permanent. Something that I did not understand. Now there is Tibesti - Tahiti, who show that they are opposed,
Clearly

Hypothesis - Maybe the earth does not turn, in the end, in relation to this flow, that it rests on it, on Tahiti, that the flow G wears it, crosses it, like an anamole, a branch, crosses an organ , a corp, an orgonom.

Ameriques, a little right of the center of the anamole current which comes to Tahiti at 62°

AE Tibesti - Tahiti
letter essay

´´

Dear,

I think that Demeo James is right in Saharasia, but also that Saharasia is the inverse of the flow that crosses the earth that R. described. In the form of an anamole, he comes to 62° with respect to the equator, he arrives towards the îles of New Guinea, his plan passes/arrives by India, approaches itself to the earth, wraps it, passing through all these islands, passes under Latin America, Ushaia ..., then goes back up, bay closing itself, by winding/wraping (cyclones, form of continents) passing by Saharasia (which is the back of the buckles.) And ride up/back up at the end of racing/run, above Russia China Mongolia. The flow does not meet the Poles, there are some 28° below/above, the buckles are divided into two around its axis, like the rest of nature, leaves, rivers, feathers, orgonoms, goes in an direction at a side, and the opposite direction at the other. A cyclone in northern hemisphere, in America, is between 90° and 120°W longitude (that is to say the most distant laterally from the Arrivale Axle (of the planet/globe/ ball)). It has its opposite counterpart in the southern hemisphere, in the other direction.
Not opposed with the equator as axis, like R. drawed it, but in respect to the Galactics axis, that he discovered. (From this Anamole, this moving branch that holds the Earth. (Look at the bottom of the Latin America to show this meaning, and the Peruvian coast that runs along, inclined, from afar, the axis of the flow/stream, roll up/whirlwind/wraps with it, below, for example.)
I owe this discovery to Demeo; In his book Saharasia, he described Tibesti(Tchad, Africa) as one of the most arid points and most at the center of the Sahara and Saharasia. I then looked for its opposite on the terrestrial globe with the longitude/latitude coordinates and came across Tahiti, almost exactly, as well as around Tahiti, in the same regions of the globe, the islands that he described (in continuation of R., Malinofky and others between), as the most "matrists in their culture, the most devoid of violence, with an abundant nature; Exact inverse in the Saharasia regions, described as patrist as much as possible in their culture and with an ``nature´´ devoid to the maximum, without vegetation, without water. I then saw that the croissant/crescent of Saharasia (´´Golden Crescent´´ in the court of history in Fr.) was exactly the same as that forms the islands towards Tahiti, but inverted.
We know since R. that the e. of Life, in large quantities, product water, vegetation, animals, wealth, happiness etc. And that without, it is the desert. I was looking for how the Earth met this flow/stream, as a result of the descriptions of R. It seems to me that its point of arrival (in large quantitity on the Earth's surface) is between the Indian and Tahiti - Ushaia and that it crosses/go through the Earth, at the same time by the interior of it, (the volcanoes which form themselves there are its expressions, interrelations, like plant shoots which spring up and absorb) and at the same time by the sides, the edges of the ´´ball´´ (ball; analogy of R.) making visible meteorological phenomenon.

If there is real inside this;
- I do not understand how/why the Earth turns anyway on the equator.
- Why this plan is more or less fixed compared to the Earth.
- And there would be a front of the earth, as well as a rear (which is almost near the Meridian of Greenwich)
- Perhaps it would be necessary to shift the equator and simply put it to 62°.
- And Himalaya would be like an arrival ramp, and the Indian continent would be as a arrow indicating the direction (of the galactic flow on the earth.) (like a traffic panel)

Cordially

´ ´

AE Tibesti - Tahiti On a planisphere, the G. flow/stream can be shown as a sinusoide passing through Tibesti and Tahiti, crossing the equator at 62° and whose the summit, which does not go higher nor lower than 62° latitude North and Sud, is between 0° and 30°E longitude in the northern hemisphere, and 150° 180°W for the southern hemisphere. The main cyclones will be made between 90° and 120° longitude East and West.

GB Vocabulaire suite

Vegete
Epicure
Reich

Vegete, sa philosophie, encore plus ruinée que celle d´Epicure, ses conceptes, son nom, ses mots, sa provenance son savoir, son peuple, tout reste les syllabes vegete ...

Retourné exactement comme Epicure et l´hedonisme. l´epicurisme, les atomes (enlevé la partie vide, en levé les passions, son lien á Venus, la volupté, l´amour, enlevé le ´´ c´est necessaire pour la penseée qu´il y ait des atomes (insécables) ´´

Idem pour Reich; Orgone, bien que, en 2023, c´est encore tout jeune, le travail a été fait des les découvertes, des l ´inscription sur papier et publication.

Vegete ... seulement les végétaux sont animés, et encore, le sens d´animé a été enlevé. de vivifiant, de vivant. Reste les Vegetaux, comme ća, c´est tout. Mot completement vide. Végétaux animés, animés comme les animaux, meme façons décrites, car c´était un vétérinaire animé comme les humains, car illes sont animaux. Méme le mot animé est vide de sens aujourd´hui, qui se souvient que c´est mouvement? soufle de vie, ame etc. et que les végétaux, les animaux, les humains, fonctionnent par la sexualité, les mouvement plasmatiques, les superposition, factions, défactions, expansions, contractions. Amour a été rayé jusqu´a dans les plantes ...
Veterinaire Latin, Rome je crois, an ~0, enfin, pas si vieux

GB Histoire Biographie djeleas
Découverte du sens opposé du flux, hommes, femmes, male femelle

Je pensais au sens de circulation dans la colone, aprés avoir imaginé et vu qu´y avait 23 ou 24 croisement chez Homo Sapiens. pres de la fenetre, apart ´´rouge´´ Je pensais á Aurore et cherchais les directions, en observant. Quelques jours plus tót, en rentrant un soir de biblio science, j ´imaginais, comme ća, étre derriere une écorce, tout comme ce que je venais de lire des systemes descendants des radicules des arbres, l´image me plaisait, du cambium gelatineux un peu mobile mais pas trop, avec l´écorce, ća allait bien avec mes rencontres de jadis, mon évolution, niveau temporalité, type de rencontres, semblables á diférents niveaux, peut étre.
Je repensais, tres vite fait á cette phrase de R. ~p127 sur. cosm qu´illes ne savaient pas pourquoi on est 2 sexes diférents, pensais aux seins d ´# , tous les sens, essayais, voulais les avoir, les attirer. Penssais a # aprés, puis # juste aprés avoir decouvers
Ce fut ma confirmation, ća semblait bien comme ća
Puis je mettais ća en relation avec
Ah, quelques jours plus tot, á la biblio Bep, ai vu que plasm était exactement comme Nebuleuses, et sexualité contenait les astres, astre chez fille, une á coté, á la volée je compris que c´était dans son dos que ca se passait, et il y eut un mouvement general tout autour, elle me regardait serieusement. Ća, c´est ce qui m´a poussé á écrire, partager. C´était bien trop grand comme savoir. Savoir gaché par la peste á mon égard (alors je fis les premiers dessins, par dépit) C´était mon travail de mise en redac de tout ce que je savais plus de l´observation, á grands coup de combats perpetuels pour pas étre distrait. Je dormis longtemps dans le couloir, par terre, absolument seul, sous le grognement de haine d´un voisin du dessus Ultrapresent qui cassait chaque inspiration, Une vraie plaie de chaque instant, impossible á définir mieux.
Il y eut une conférence d´été, en ligne de WRMuseum, quelques jours avant je visionnais une archive de conf et observais Mouvements des mains des intervenantes sur la sexualité. Une intervenante fit un mouvement vers l´avant, trés marqué, á la fin, elle était en état de choc apres la decouerte de l´e. Renata Moise Reich l´a rassurée alors, puis montré du bout des doigts les rencontres. Auparavant j´observais ses mains qui suivaient ses pensées, elle avait une faćon délicate, répété Pour la deuxieme fois, de les dérouler vers l´avant et me demandais quel était leur sens, direction, si ća aurait un sens. .
Le lendemain ou 2 jours plus tard, á la biblio, je regardais, tres vite fait, en passant, l´image d´un dessin d´uterus, pleine confirmation ce fut. Ce fut, completement inatendu, les 2 trompes, le sens.
de la, je révisais encore le sens des hommes (le soir ou lendemain et suivants jours) c´était bien ća.
C´est quand, n´en étant plus á mes premiéres surprises générale, je décidais de tester cette théorie de l´ecorce, en cherchant á réactiver mon flux, mon désir, ma sexualité, avec un fantasme de cette invnsion et de pas lacher cette théorie que je vis que ca bougeait, Puis, completement, l ´anamole qui vint, c´était confirmation.
ette anamole, je l´ai noté, dessinée, consciencieux puis retestais les jours suivants.
Ah, je me demandais aussi, ce que le plasma attendais de moi et comment ne plus avoir, un peu mal, etre bloqué en bas devant. Systeme desendant/montant, la théorie marchait. l´imagination était réelle Mais pleine de lois que je ne connaissais pas. Je la travaillais.
Je cherchais aussi á découvrir comment j´avais pu attirer # de faćon attendue/inattendue (ce fut le début de pas mal de choses) par ou, comment, (pourquoi?) bien longtemps avant, deux ou trois ans plus tot bien qu´elle m´eu traité de ´´tricheur´´ et toute cette triste, dure histoire.
Puis á la conf WRM, payé plus de 100 euro, je l´ai regardé, cette année par dépit... aprés les nébuleuses, c´était mon état d´esprit, il y eut un intervenant qui fit un mouvement de la main, lui aussi, je regardais le sens direction, c´était le bon, celui que j´avais noté. Pour homme.Tom Diferninando, je lui envoyais les dessins en demandant si j´avais raison sur ća . Il répondit que deux fois, une fois pour savoir ce que je voulais, si on se connaissais, une autre enjouée et vague continuait les questions, avec des promesses de réponses, puis plus rien. Sachant notre probleme, je lui envoyais la suite des dessins, dans le silence eternel.
Il y eut aussi une photo de deux squelettes, dans Saharasia de Demeo, un homme et une femme, qui m´emeut fort pour leur position et la beauté de la chose, des asiatiques, proches l´un de láutre, elle, de profil, légérement courbée vers lui, belle, et ses cotes que je regardais. Lui de face, la tete vers elle, un peu penchée. Assassinés mais illes s´aimaient, c´est sur.
Mais c´est surtout cette hypothese et dessins de soucoupe volante, ce décalage, pour naviguer, qui m´inspira et me fit rechercher dans cette voie lá, en quete du vrai dans le fou et la science fiction et l´art et l´envie de naviguer et le besoin de bouger et l´observation, 1er dessin de cette série apres le résumé MDC
y a eut aussi les pigeons, que plus je regardais, plus je respectais, les seuls étres vivant assez gros que je puisse voir en ce temps lá. ce décalage entre la téte et le reste du corp fut inspirant - et débloquant.
Il y´avais aussi, que globalement, ća allait pas avec les femmes. Trés peu semblaient l´avoir lu (quel soulagement de voir qu´il y en avait!)
Il y avait Colline, quand on en a discuté, une fois á propos de ća, elle insistait pour dire que c´est dans l´autre sens, que ca remontait vers sa tete (puis il y eut la peste qui entra soudainement en gueulant p...dant (chantant, se pavanant) par peur etc, coupant net les 3 mots échangés, sans surprise); y avait un truc qui allait peu étre pas finalement dans ce mouvement qui descend; eut étre diférent chez l´homme et chez la femme me demandais-je. timidement. bien que je savais qu´elle étais grandement bloquée en bas, histérique inquiéte, et donc peu fiable sur ces trois mots. on pouvait les interpréter comme un simple rebond, ou l´envie de felation ou je ne sais quoi de bucal, et c´est tout. Mais je gardais un doute petit. trés petit, c´était la premiére á me parler d´e. je crois, á décrire ce qu´elle resentais. d´agreable lors d´une felation. Ca m´avait étoné mais j´avais gardé le doute lá aussi. et elle avait raison. redevable donc. Il y eut le film ´´George qui?´´ qui commencait par décrire la ´´seule diférence entre un squelete d´homme et de femme est les os du bassin plus grands chez femme´´ et s´arretait la en marquant la phrase. dit par une femme. Il y eut le livre sur les squelettes de la biblio p8 que j´ai consulté plusieurs fois. Rien que des photos, d´especes diférentes - grand livre que je laissais sur la table en partant - comme 8 ans plus tot pour m´aider avec des images naturelles quand je fais de la philo difficile... ou je vis que les os étaient diférents entre l´homme et les autres especes, et en quoi. Choqué de la brisure dans la colone vertebrale. Me demandant quel était le mouvement dans ce bassin alors ainsi
il y eu la phrase ´´befalen a whole specie´´ de R. qui m´a enervé aussi en plus des autres Whole gen. of viperes and vermines etc
Il y eu la these d´# biensur qui mentionnait des mouvements derriére devant, sur les cotés. etrange ce fut mais j´ai décidé d´y croire et de chercher.
Il y avait que c´était la seule chose que je savais faire, pouvait faire au final, dessiner, je l´avais déjá fait pour #
et puis tout le reste, les mots qu´on se dit pour s´encourager ´´Tahumazien´´ découverte, merveille etc. les mots en latin a des moments clé qui m ´ont sauvés. La volonté acharnée de m´isoler et de me détruire des anciens ami-e-s
Il y eut Aliche, qui me confirma que oui, elles ne savaient vraiment rien de rien. Il y eu toutes les expériences autres.
le mot ´´Developpement´´
il y eut ce silence qui devenait douteux et ce dist d´expérience que l´a ou il y a silence et évidences, c´est á questionner
Le tout fut une confirmation nette, que ća fait 50 000 ans qu´on se croise et se parle entre homme et femme, sans jamais se parler.
Puis il y eut cette phrase de la Genese ´´la femme née d´une cóte d´Adam´´ qui montre bien ce mouvement vers point de rencontre.
il y eut cette phrse de Melo-Maria qui galerait visiblement ´´ je la met ou?´´ parlant de l´e. dans son dos.
Il y eut que je galérais moi-méme depuis des années maintenant pour savoir que faire de mon exces d´e. quand j´en ai, qui fut préssé par l ´apparition de mes metastases que j´ai ensuite tout fais pour stoper leur developpement. tant á comprendre. C´était vital absolument. Tant j´ai pas eu de chance a ce niveau (+ a la machoire qui s´est a...er ... mouvement a comprendre en plus, c´était long pour la moindre évidence) vital aussi) ća m´a enervé - aussi! Il yeut pas mal de marche , de test en pleine rue et chemins. Non stop a vrai dire
Il y eut les ´´2 secrets that I emport in my tomb´´ que R. ecrivit et les éléphants bien sur (point de départ de folie´´) Il y eu tes encouragement extraterestres quasi direct que Renata Moise R. décrivit ou un vaisseau llá approchée, encouragement a la decence etc. et a connaitrell y eut les vers de Villon, Rimbaut, Ferré Sur les fesses. Mais surtout Villon ´´Ma téte saura que mon cul poise´´
Il y eut des miliers d´inconnus qui m´ont laissé vivre jusqu´á lá. Il y eut les eureka du dessin sur lune ou autre astre avec # ~Mon visage est fait du sien, de son regard´´
Il y eut la certitude qu´on est fragile, qu´on a pas de mémoire, qu´on est si vite distrait, que tous et toutes S´entrepayen á nous détruire, détruire mémoire, intelligence, Savoir, amour, etc. Réaité plasma vision entente. Ća m´a enervé.
il y eu l´envie de sortir. Il y eut # qui n´est pas venue, Malgré toutes mes croyances et découvertes et changements. Ca m´a déću, enervé .Il y eu Dante qui a dit´´e qui a l´habita, e man che trema´´ que je posais en, c´est le plasm, la vie elle meme qui agit ainsi, elle tremble, est timide, aprendre soin. Juste avant l´anamol.
Il y eu mill ans de tourner en rond, rester seul, compulsivement et de sublimation, expres, pour laisser place, peut-étre a euristique.
Maniaque devenu. Non gratifié
Il y eut #@ qui m´a envoyé deux trois texto de temps á autre. Puis plus. ai du batailler tant de fois pour la chercher, puis ne l´ai plus cherché.
Il y eu ces carnets. Rhodia, souples, dotté
Il y eu un mouvement crescendo de confiance en moi dans les découvertes. et les confirmations de peste : et de R. le reste.
il y eut le souvenir retrouvé de l´amphi avec # et les autres.
Quand je l´ai redessiné, passé du carnet au numérique, je me suis demandé ´´vraiment si simple?´´. autant que ća? tellement qu´on a rien vu. et aussi si R. et les autres autour de lui l´avaient caché volontairement, et si c´était ethique ethique, de le montrer si y avait des Conséquences de viols ou autres profits.

TT Tian Shan

Je pense que la terre en a besoin de ce flux.
Oui c´est bien d´une flame qu´il s´agit, dirigée vers en dessous, vers proche-orient etc. Mais rayonant autour.
quelque part, ce flux, cette partie, ce dispheriloide lá,
est resté accrocchée á la terre. Je crois que le Mieux est de la décrocher pour qu´elle continue
Son chemin dans l´axe galactique de ces anamoles.
Vers NE donc. Si j´en crois mon coeur, mes épaules, mon thorax, ce décrochage sera vécu comme un
arrachage difficile de dessous la terre á cet endroit avec quoi c´est superposé.
Mais ća libére la place á un flux plus jeune, riche, frai.
Je ne sais pas si ća change l´orbite de la terre.
Pour l´arracher (le remettre en mouvement) peut-étre créer un point de concentration au dessus pour l
´attirer - weaker to sronger, dif. potentiel etc.
Sinon je vois pas comment éteindre vive flame si grande qui brúle inaperćue depuis des miliers d´années.
Jeter de l´eau dessus ? de oú?

Corps (FR; Body)
Cores
Orgone (R. neolog.; orgasm + organ)

; CORGONE

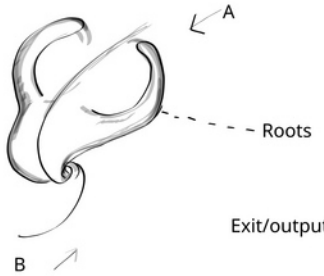
(djeleas neologism)

(Corpus
caelestis
formatur (roughly
LAT.))

LG Cores teeth

It´s the same

(e. g. ; next to the canines

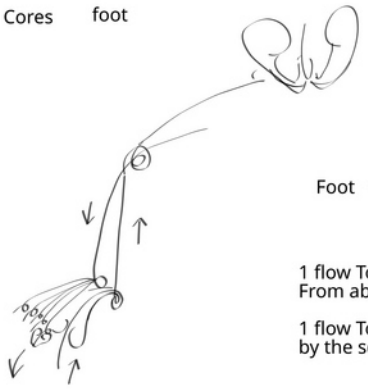


with 2 roots

(edit 5 days after; which are therefore not roots, everything except roots, but the continuation of the exterior edge of the Core resulting from A and B. A coming from the Core Skull, and B coming from the Exterior.)

Exit/output of the Sup. = sensitivity

LG Cores foot



Foot = Zone of exchange

1 flow To exterior
From above , the fingers/toes

1 flow To interior
by the sole/base of the foot

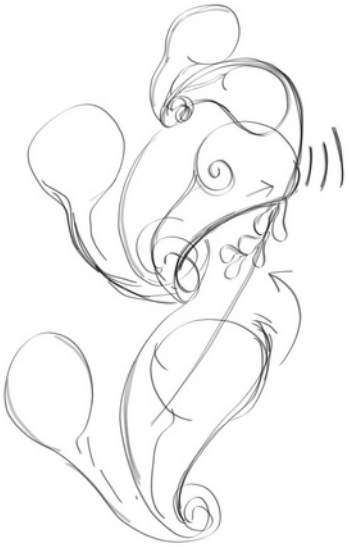
Cores 1 and 2 in opposite direction

the 1st comes out of the pelvis, goes to the knee articulation, bone front of the leg,
Then bump at the bottom (not the heel; ankle)
Then bones fingers of the feet/toes.

The 2nd, by the sole/base (reverse core/dispheriloid compared with the rest of the body)
Then heel, then ascend backbone bottom of the leg
Then surround knee articulation = kneecap,
Then returns Pelvis, by articulation (without bone but tendons under the thigh)

AE Anamole Earth Following

Europe



Europe
Core 2, Wing 2

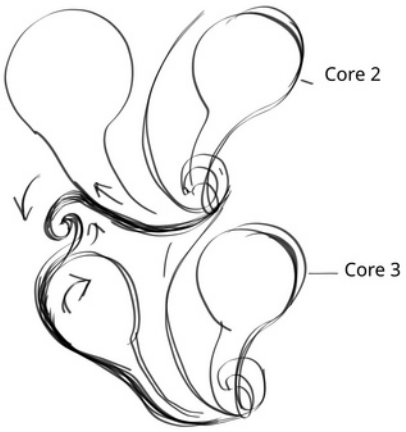
Europe : Very distorted,
The Wing is pushed while developing ;
By flow of Core 0 which impede it at the E. ;
By Wing 2 of Core 1 which push it from the N. , on the top;
By top of Core 3 Wing 2, which rushes to him at the E. from below.

The Alps are edge exterior. of the bottom of its Wing.
Strucures of Core 0, the old ones, shift to the left, pushed by by Core 3, Wing 2, and pass under Ext. Edge. from the bottom (from Core 2 Wing 2)
Ext. Edge of the top, by pushing towards the right to develop, impede Flow of Core 0 to circulate easily above Tian Shan (Core 0 Hole, Sup. Exit).
Flow Ancient structures between Core 0 and Core 1 (in the same place) shift to the right , Mountains.

Everything is very contracted.

Between Core 3 Wing 2 and Core 2 Wing 2, it is the same than Meso-America.
Interior Big Whirl = Germany (Talheim , town). Very great strength, expansion power. Every ~ 50 years , comes to bang towards the W. , towards France, then returns to E. and S. ; oscillation = the largest groundwater table in Europe but also invasions by Swastika etc. The eye that cries the most of the planet. Verdun - where I was born; Phalsbourg

AE anamole Earth Following Meso - America



the main flow Core 2 Wing 1 at the start is diverted by and fusion with (is superimposed) the main flow Core 3 Wing 1 at the top left.
(weaker, but Continuous
and rushing on it)
it does cyclones etc.
And the whole shape of the Caribean sea .

AE anamole Earth Following Global warming planet ;

Solution ; between Tian Shan and Verkhoyansk Mountain : Dig

And rather that as an lifting/tear-off It will be experienced as a ´´INflaMmatioN´´
like a living tissue where the flow Pass once again finally.

(Expand when downward,
contracts when upwards)

The earth is at the anamole end,
Turns always in the same direction
While receiving the inflow that makes
the cores.
In this oscillation , it lean
Compared to the G plan, ecliptic, Sun,
inclination .

Histoire Core fruits ´´paons´´ h&f(s)

Pour le Core dispheriloide ,
il y a eu la graine de Tileul de l´arbre á coté de la fenétre. y en a eu une qui est venue sur le rebord, Puis plusieurs. Au bout de quelques jours J´en ai mise une á coté de l´autre, puis au bout d´un moment, me forcant, mises symetriquement , tel que sur l´arbre . Je dis en me forcant, parce que c´était stupide ce genre de ´´Jeu´´ d´ennui, et inutile etc. Puis quelques jours plus tqrd, toujours cet automne, un matin, je me suis autorisé 5 minutes dans le petit Jardin ou y a l´arbre entre les bátiments, regardant le ciel au loin, ce qu´il restait d´étoiles, Mais rien vu, je repensais un peu á l´anamole de la Terre , me demandant si c´était possible. Puis, dé´u de ne rien voir, juste avant de rentrer, Tandis que je marchais, Pressé pour pas être vu là le matin, Seul, oisif au milieu des travailleurs etc. , je me suis autorisé, difficilement, de faire deux Pas en arriére pour compter les graines sur l´arbre et observer leur disposition, , une moyenne de 7... ,Je dis difficilement, parce-que c´était stupide cette sorte de Jeu inutile, Tandis que surement sans doute, l´au-delá est plus important á se soucier; le ciel, plutot que ce qu´était juste lá, l´arbre, béte et imobile, ne parlant pas, etc. Entre les deux épisodes, en ville par hasard je vs ces graines Par terre devant un magasin á l´allée des orgueilleux, je m´autorisais difficilement á regarder en l´air et m´arreter 2 secondes et demi au milieu de la foule pour regarder si elles étaient sur l´arbre dirigées vers le bas ou vers le haut. C´était le bas, je ne le savais pas. Je dis difficilement, parce-que á cette heure et dans une ville, il fallait rentrer vite et regarder droit devant soi; sinon on est accosté, questionné, dévisagé... J´ai réussis á voir et rentrais en bus, seul.
Il y a eut la mandarine ... Récupérée dans une des Poubelles du batiment, au milieu de la nuit j´avais faim, á la lumiére de la bougie, je regardais difficilement la forme d´un quartier et difficilement déduisais le haut du bas aprés l´avoir retiré de la peau et détaché des autres, il restait deux quartiers; j´avais tout mangé, mon seul fruit en peut-étre 6 mois ... difficilement alors je les remettais dans leur peau Pour déduire le haut du bas, pas évident d´abord. une fois Trouvé, difficilement, je les placaient symétriquement, et , au bout de longues minutes d´observation ainsi, seul dans une nuit, des petits bouts logiques de leur formes m´apparaissaient , je les mettaient en relation avec ce que j´avais désiné en final du systeme opposé des 2 sexes. Et lá, Magie; Ca correspondait.
C´était fou, pas sur, et completement inatendu. Je regardais encore, et plus les heures passaient, et Plus j´avais de question, par exemple; pourquoi la graine précisément á cet endroit et pas ailleurs, Sans réponse, peut-on voir les traces des tourbillons dans les tissus blancs qui font le dessus du quartier ´ le coté ´ entre les bules gorgées de jus ´ entre les quartiers ´
Toue la découverte du disphériloide s´est fait lá, ca correspondait entiérement au dessin dont je viens de parler, (le paon h(s) et son inverse devant) simplement en prolongeant les flux sexuels) les tiges blanche au Milieu , comme arrivée du flux était parlant et je vis alors que j´avais eu raison pour l´arrivée par le bas du fruit , le tout petit opercule de dessous, presque invisible, que, j´avais imaginé quelques jours plus tót devant une friterie oú il y avait un pot de fleur et un tout petit jardin avec un arbre avec des sortes de groseilles rouge , en ceméme automne. Ca m´avais stimulé et restimulé. Je l´avais noté difficilement. Je dis difficilement, (et méme Trés difficilement, Parce-que c´était stupide (et méme trés stupide) de noter cette sorte de chose inutile et béte et folle ... Tout remetre en question ´ bas voyons. découvrir un principe de base présent partout depuis toujours, et jamais compris ´ Completement inutile (et meme trés completement inutile) et puis pourquoi, et pour le dire á qui ´ Je suis seul ... (et méme trés seul)
Bref je connectais le fruit rouge de la friterie, avec la mandarine nocturne, avec le dessin des prolongements sexuels des paons h&f(s) de face, (que j´avais fais quelques jours plus tót) avec le final de l´étude des pétioles (oú je postulais l´arrivée dans le fruit par l´arriére , ainsi que le rebond sur la tige du fruit et l´espacement qui grossit etc Plasma, et que c´était parce-que ´a peut plus rentrer dans la plante) Ainsi qu´avec les graines de Tilleul , tout correspondait.
Puis plus tard, je connectais ´a avec l´anamole Core crane , il y eu un bref flash sur de longues minutes a regarder une photo de crane dans Saharasia , aprés avoir difficilement Numéroté les pages ou y avait des photos de cranes. Tout á coup c´était évident , mais y a eu long parcours avant. Je dis difficilement, parce-que c´était stupide de numéroter des pages en liste alors que l´auteur ne l´a pas fait , surtout pour des parties de corps humains, cette sorte de jeu inutile ... pourquoi´ pour qui ´
et puis c´était fou, ´a correspondait pas avec ce qu´on voit en Premier , la dentition , la machoire , la grosseur du bas et le lisse et dur du crane de dessus en une sphere parfaite ...
Stupide de penser qu´elle était pas parfaite et que l´ensemble du crane , de la téte avait une logiquue , stupide de chercher , stupide et ... étonnant de le découvrir , comme ´a , dans l´ensemble , d´un coup , completement inatendu . C´était aprés la dispheriloide mandarine et Tilleul , quelques jours . Mais vers le milieu d´année j´avais avancé dans cette recherche,
Soudainement, un matin en pleine nuit , au reveil , quand je vis juste cette simple boucle avec une arrivée droite , et que difficilement je notais et prolongeais la sortie vers le bas en faisant une autre boucle qui pourrait , soyons fou , correspondre au mouvement dans la machoire , et la grande boucle á celui du crane et l´entrée , á la bouche, au flux qui vient. et stupidement dessinenr ainsi un crane par absorbtion du flux du plasma .
Il y avait aussi mes dents biensur , Malgré ces presque trois ans de Recherche de compréhension á mon tic de machoire du bas et de guerison des vielles caries etc. plus toutes les années avant et tous les accidents , dont surtout les abces et les douleurs ... Rahlala , il y eut tellement avec ces dents.
Tellement plus que trois lignes ici. Jamais rien de positif, sauf Peut-étre quand j´ai vu que je pouvais garder une molaire grandement abimée et m´en faire un totem de combat contre la société (qui voulait me l´arracher et en faire un totem de mon echec final , de ma mort)

Histoire Tarim Tian Shan

Puis y a eu le Tarim bassin, alors lá c´était l´´álu´´ Complete de voir que je venais de découvrir la preuve qu´y a bien un flux dans Cette direction qui passe sur la terre, et a la fois des les cores dispheriloides géants existent et que savoir cette forme était un prérequis pour voir ce flux . l´halucination complete . Une euristique absolue depuis le débat ... M´a fallu un certain Temps pour considérer la chose , ai bien regardé Toutes les photos satélite que je trouvais en bibliotheque (pas sur ordinateur ! ´a casse les yeux !) Ca correspondais et avec toutes l´histoire géo détaillée dans Saharasia.
l´halu complete ... . absolue ... aprés quelques jours , soyons fou , j´en cherchais d´autres des cores , desous , dessus ... Je voyais pas , juste des petits , de profils de ci de lá , des peut-étre .
Puis je doublai l´halu avec le Core Amerique du sud et Afrique ...
Tout simplement ... Alors lá ... . Je ne pensais plus je crois ... cherchais encore et trouvais Rien de moins que l´arctique ; sa forme était bien celle d´une aile de Core , jamais je m´en serais douté .
Je vérifiais, placant groenland et Islande , tout correspondais.
Si dessus c´était ´a , j´allais Regarder dessous ; longeais les dorsale ... et au bout de plusieurs jours je découvri le core Antartique avec Australie - incroyable - une photo satelite confirma le mouvement Parfait des Nuages Tout le long de l´ailette Australie . Cette photo était faite pour montrer une succession de 4 ou 5 cyclones au dessus de l´Amerique ... n´y trouvant Pas de logique , je regardais en bas de l´image, difficilement, avant de refermer le livre et de partir , seul .Je dis difficilement , parce que c´est stupide , cette sorte de jeu inutile , de s´empecher de fermer un livre alors qu´on est entrain de le fermer et de descendre les yeux de ce qui est manifeste et fixer le nul-part , l´ininteressant du pole sud . y avait pas une seule photo ou on pouvait voir l´Antartique et l´Australie cóte á cote , enfin, sur le méme Plan . Je déduisais difficilement qu´y avait intérét á trouvr .
Je dis difficilement parce-que c´est stupide cette sorte de Jeu inutile de penser que toutes les photos satelites sont choisies, Rognées , trafiquées (enlevant systematiquement l´envelope bleu de la terre, du plasma en l´attenuant trés fortement ou remplacant tout bonnement par du noir complet Manifestement Rajouté par un détourage á Photoshop . et stupide de penser qu´illes voulaient Pas que ce soit visible Nul part , et volontaire de Ne jamais montrer la terre Vue d´en dessous ... (Comme le reste Hein ´! Jamais montrer le dessous des corps ... Tss ...)
Puis cherchais le lien entre Tarim et artique , et difficilement le trouvais au bout de quelques jours . Je dis difficilement parce que c´était stupide cette sorte de jeu inutile de fixer des photo au milieu de gens qui nous méprises ou nous prennent pour un débile ou un monstre et de penser qu´un flux peut se recourber a cet endroit et que les photos sont tellement mal Cadrées
et toutes les cartes et tous les planispheres Tellement déformés que la moindre continuation était absolument impossible á voir . l´a fallu venir par le haut ; dorsale de Gokkel , presqu´ílle , Verkhoiansk , et un grand effort d´imagination Tellement le lien est effacé des représentations . et les montagnes lá-bas présentées comme ininteressantes . Toute une zone oubliée ... Déjá , le Tarim Tian Shan, je connaissais méme pas , mais alors lá ...
Puis je connectais tous ces Cores ensembles, me disant que c´était assez . (en 2 em étape Surtout Connecter ~ Australie / antartique avec Tarim) Je fis un dernier effort Surhumain pour Numériser ces 3 ou 4 dessins en 2 ou 3 fois , flipant pour Ma vie au plus haut point , l´envoyant par mail , brut á A(s) , ultime effort de les inclure á la suite des autres images . J´étais en folie complete enfin hebetude ... Halucination ...
Je connectais alors l´anamole totale á la desertification et compris l´altitude du flux . de celui-lá et le connectais avec le dessin de la flamme , Flox flogos . Je Retournais en bibliotheque et Regardais difficilement les deserts d´afrique de Nord et de turquie et imaginais apres un long moment les formes Possible et les marques au sol visible et vi l´oposition de tourbillons Un peu décalés . Ca correspondais . Je di difficilement ...
Ce fut mon anniversaire et je mis sur internet . Au moment ou j´écris ´a , il s´est passé un mois et ~10 jours depuis mon anniversaire . ou je ne fis Rien , Ne lu pResque plus , ne Sortie pas , Rien . OS . Il y eu des bonnes années que j´envoyais , 3 ou 4 qui eurent des Réponses - Mais rien de COHÉRENTS .
Il y eu le moment ou je vis le Core de mon penis . Un jour Ce fut le gland , difficilement Nu antre ce fut avec les testicules , difficilement
Il y eut le jour ou je vis les cores dans mes doigts , dans ma paume , mon avant bras droit , mes jambes , cuisse ... en fin , tout difficilement . Tout était stupide et jeu inutile , Competement . l´halucination et le pressentiment Completement confirmé que j´avais découvers la forme absolue partout présente , en tant que fonction , de la suite des superposition , du plasma , Me poussa á noter Jackpot ... et je connectais ća á l´arbre de vie et surtout a A(s) et lui envoyais un Mail ou je disais alors que j´étais allé au boút du ´´délire d´un type´´ en lui disant une ligne avant que Vos doigts, phalanges , paume , avant-bras et la tian Shan montaigne , c´est ideM .
C´était entre l´épisode Tarim et la découverte des autres Core de la planette .

LS epilogue log

Ruka 01 /02/2024 vers Minuit ? C´est lá que l´ai partagé á 3

1 , avec legende et autres txt , ´´ C1 , A2 , BE ´´ et ´´će qu´il reste de tempéré á notre planete ´´ ~ Pas de Reponse
2 , Sans Rien d´autre mais visible sur whatapp Sans avoir a cliquer dessus . 3 jours plus tard , n´a pas ouvert la fenetre de conversation . pas de Réponse
3 , Sans rien mais aprés dernier drawing . done Reponse á la volée , headshot FPS , ´´ Top ! ´´ suivi de 6 Mots , puis plus Rien . ´´ je n´en ai encore jamais vu ´´

Epilogue facon de penser

Les Sentiments , Sexuels , te donnent des indications Sur l´endroit de ton corp ou tu as des ancrages . En ayant associé un souvenir d´une persone , d´une Rencontre (Rarement sexuel en acte , plutot des frustrations diverses et varées , par parole , bruit , Sensation d´une situation avec un flux quelque part , qui l´arreta . A toi de remonter á la Source , essayer de se souvenir de quelque-chose , (pour ća faut avoir bien mangé , bien dormi , étre seul souvent) , oser Se souvenir une fois appercu . Puis y reconnaítre la sexualité quelque part , d´une maniére ou d´une autre , tu verra (si tu penses comme moi) une partie du Corp de la persone du souvenir. Tu l´aura vu en Regardant ton corp . Puis Essaye d´assumer que cette partie chez l´autre , (identification) c´est la tienne . Oui , celle que tu regarde ou essaye de sentir .
Lá , tu verra que quelque-chose Se met á bouger , plus , Naturellement , tu questionnera cette partie ou l´assumera. ca fera de petites Saccades surement , ou bien une grande douceur , si tu as enlevé Pas mal d´autres ancrages .
Pour tout ća , faut Manipuler ses idées , et pour manipuler ses idées, faut avoir écris , essayé , s´eforcer , beaucoup , les agencer , les disposer .
Pour ća , faut avoir lu , beaucoup dans mon cas , Pour savoir que c´est possible . l´etymologie des mots t´aidera beaucoup , infiniment dans mon cas . On aura fonctionné avec des Mots entre humains . chaque ancrage se traduit en Mot á ton esprit . Et a grande echélle , les Religions maítrisent les Réseaux par les Mots qui sont ancrés .
Tu cherchera des signes , va , ća ne Sert á rien , ils t´excederons si ils apparaissent . Puis faudra les dépasser pour oser vivre et t´affirmer.
Tout ća est infini , parfois il est bon de Rester petit .
Rien n´est plus haít que celleux qui font ća . Personne n´est Plus trahi , car lecture et ecriture ménent á la connaissance , celle-ci , au pouvoir , qui est réelement superiorité sur celleurx qui n´ont pas lu et n´ecrivent pas qui se sentent faibles et vulnérables , qu´illes ne vallent Rien . Illes ne Vallent vraiment Rien . Et tu cherchera un Moyen de faire chuter ton orgueil car tu es combattant.e pour des causes justes, á la base , et ces idées son inverses .
Écrire laisse circuler le flux á l´interieur sans y penses C´est un systeme d´autofelicitation , qui Resout les castrations genitales Sans que t´ai besoin de t´embeter a penser du genital . Bref , tu es faux.sse , (et hypocrite) et orgueuilleux en acte Souvent en fait , Sans l´admetre . tu vois qu´y a pas Raison de se Revolter contre la différence de culture et de pouvoir qui t´es imposé . En fait , ća fonctionne juste comme ća c´est injuste mais Non . Tu es arrivé a la lecture et ecriture par Solitude et Hasard car illes t´avaient déjá trahi et Retrahi , laissé pour mort.e . Cette connaissance lá te rendra Stoique ... Zen ... enervé pour toujours , en vain . Tu Cherchera partout des ami.e.s capables de faire la méme chose , lire , écrire ayant connu la solitude . Mais ce sont justement les gens qui ont été et sont encore empéchés de lire , d´écrire , de Penser , de s´ennerver , d´étre seul (par les religions) que tu solicitera . Précisément elles et eux .
Ton seul confort sera de savoir qu´illes le désirent ainsi . y a qu´a prendre l´exemple de la technologie , artefact de destruction par exelence , qu´illes défendront de toutes leur force et Relations .
Tu verra les cercles Vicieux partout , comme on verrait des Eléphants roses ; Les Elephants sont roses ... , les Cercles sont Vicieux .
Et le temp deviendra ton ami.e , Plutot , tu te battra pour étre le sien .

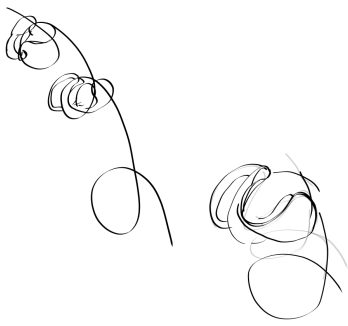
Part of the “smile of the Mona Lisa”

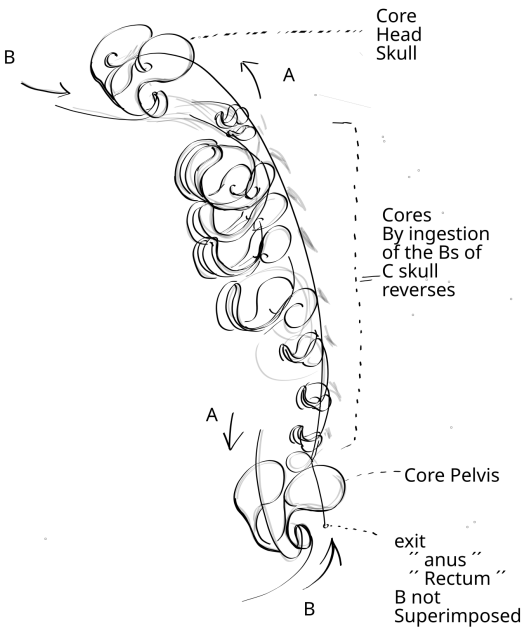
LG Skull Core 1 edit

ES = Mucus from the nose , nose
´´ runny nose ´´
(which is behind, made by A.B)

LG Core Ribs edit error)

Validates the 2 directions It makes the ribs and vertebrae
whose cores are in the opposite direction to the Core Skull and Core Pelvis





Everything else remains valid
Just the Ribs and the entire Torso, trunk, vertebrae
(large part of the body visible) is in opposite direction .
(edit 2 days later ; and same direction for ♀ and ♂)

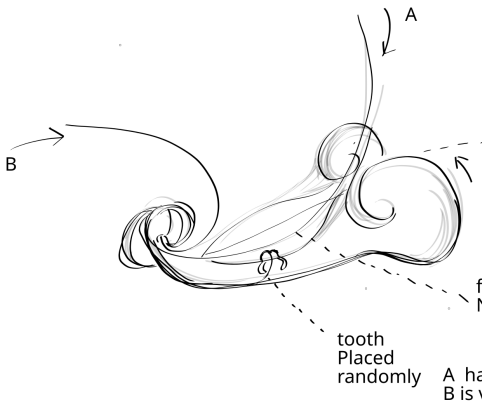
Which explains
- that there was no link
between pelvis and vertebral column ,
- that the ribs do not come from the vertebrae ,
they are attached to it by fusion of the External Edge
of the Big Whirl , which rushes on vertebra .
they come from the front of the body (bottom in
Almost all other species .)
- that vertebrae are not inverted for ♀ and ♂
because ingestion is the same .
Almost everything else is reversed .

A is movable ,
extendable towards pelvis
B too

Internal organs
heart, liver, are ((B , F , EE) . (B , BW)) , (´´ eye ´´)

LG Crane Core 5

Jaw



(A comes from Skull Core 1
B from exterior)

(rushes towards Skull
C1)

ES = hairs throat / fur
Chin, Beard

flame
Nucleus = Mouth (bazoo/maw inside)

A has been Returned/reversed toward Exterior,
B is very mobile, everything is
unstable

(ES , more or less wide depending on the stability)

Just like lower part Skull Core 1 ,
Skull Core 5 is in direct contact and almost
constant with the B general, and strong) ,

(there is enough to make some small Cores,
the teeth , with the EE of the Core going towards EI)

LG Core Skull

General	--- 1	
Jaws	--- 5	
Ears	---	
Nostrils	--- 3	--- (1st have been see)
Tooths	---	
Lip upper	--- 4	
Eyebrows arcade eye	--- 2	

LG Core chest Following

the node of the chest Core (♀ : udder , breast , Nipples ♂ : pectorals, nipples) ,
is the genital parts (node , base of flame , point of concentration
glans for ♂ Exit from clitoris ♀ ES) .
Its EE , under the BW , go through all the body .
Its BW surrounds the shoulders . (Big Whirls)
Its 2 Wings are the same as Core pelvis .

A buffalo also has enormous the front of the Torso (But without nipple) and its pelvis is directed to the up front.
it seems to ⊙ . This would be an explanation for the ever thinner , often smaller , front legs in all quadrupeds ; less
of e. , given the distance , at the Exit of Big Whirls of these large Wings . and that would explain why
Udder Breasts ♀ and pectorals ♂ , are always in the same direction as pelvis . as well as all the
front of the body .

(edit after ; Seen at Trobriand ♂ Belly : flame Nucleus (and separation of the ribs (BW , EE)
makes the flame N) ,
Torso " in V " for ♂ BW Sup. with F in the back and BW ES = udder Breasts .
F in front .
BW , ES , impossible because towards the Source of A = + strong

(A,EE).(W1,BW)|(A,EE).(W2,BW)

AO,F,EE,W2,EI and flame N

(edit next day

♂ BW back ext. to front int.

♀ BW front ext. to back int.

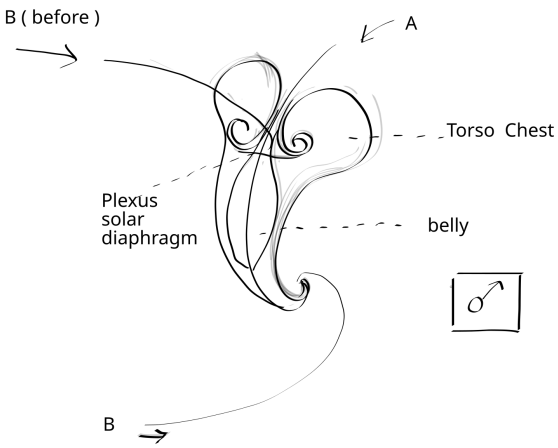
♀ (BW , EE) = (N , EE)

♂ (BW , EI) = (N , EE)

♀ Nipples (BW , ES) upwards

♂ Nipples (BW , ES) downwards

LG Core Chest Solar Plexus :



A comes from above
B comes from the exterior.

Solar Plexus

the EEs of B are ready to
Sup themselves with BW EI
the belly is the flame , Nucleus .
it is off . To power it :
unblock the diaphragm , Solar plexus
by making an intendere , i.e. , by
pulling on the base of the flattened core
of the Sup. (A . B), moving forward
the inside of his F. , until the
end of N , the flame , flogos , of (A . B) , until
bathe the node , the Wick with .

It is done with some ´´ hope ´´ at the

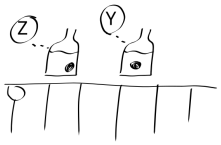
GB exp ~17.03.24 (au hasard)



Z-- graine d´olive X1 ~ 0.5 cm ∅

dans petit pot , eau ~ 4 cm , posé sur Radiateur allumé . eau etait mélangée avec Orite ou calcaire du fond d´une casserole qui a accumulé taches blanches pendant plusieurs mois a faire bouillir de l´eau ´´ du robinet ´´ de la residence Toulouse . Blanc residus déposés au fond entre ~0,4 et 1cm.

Y-- graine d´olive X1 ~ 0.4 cm ∅

dans petut pot, posé sur Radiateur allumé . eau ~4 cm dna slaquelle du Riz a été bouilli . Blanc residus pas déposés au fond . Mais quelques grains de riz blancs entre ~0,4 et 1cm . posé 1 jour plus tard .

Si Z germe avant Y ou bien germe Simplement
alors le dépot blanc est plus proche de l´Orite que de Javel / Chlore / Calcaire (Tel que def par Science morte) / Fluor / et eau pas trop toxique .

Note (la casserole de Z et de Y a la surface interieure Recouverte de ´´ Teflon ´´ Noir , efrité á certains endroit ou ayant frotté avec paille de fer il y a longtemps , le metal , acier est apparent)

Note 2 ; dans eau ´´ du robinet ´´ , avec des poils au fond , des Vers vivents (Larvae) depuis quelques mois . ~ 20 aine . de moucheron ou moustique ou juste Vers entre ~ 0,5 et 10 cm d´eau . (poils Cheveux ~3 cm et plus

edit lendemain ; les 2 graines ont été Surelevées dans coton au niveau de l´ouverture du bocal , tenu par filtre á café scotché au verre (Teste en + la germination par evaporation plutot que par baignade ou arrosage)

GB exp ~17.03.24 Suite Note 2

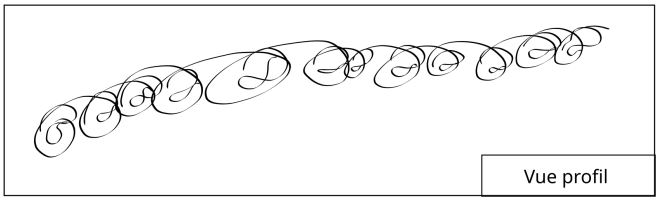
Hier Soir (edit apres ; ~1h)
ai deplacé les vers de exp ~17.03.24 , Note 2, dans un bas de bouteille en plastique avec une autre eau ´´ du robinet ´´ , sortie pour cela . en gardant , une petite touffe de poils au fond ; ~20aine de vers .
Moins de 24 h aprés , ils sont presques tous morts . 1 seul bouge encore un peu la partie avant . figés . (de faćon un peu ondulée , un peu droite .)
Pas d´autres interpretation qu´eau Chlore , fluor , javel , etc .
Pourtant ils vivaient nombreux dans l´eau Stagnée Pendant des mois .

edit apres , ~ 1h apres :
Suis allé cherché de l´eau ´´ de source ´´ en bouteille en plastique
ai déplacé tous les Vers avec l´eau dans un autre contenant ,
ai Nétoyé et ai mis de l´eau avec l´eau ´´de source ´´ , dans le contenant . Puis ai mis quelques Vers dedans ,
dont 1 ou 2 Semblaient encore Non totalement inerte . Une 10aine en tout,
au bout d´une minute , les 1 ou 2 ont bougé beaucoup plus .
Un plus gros (ils sont moyens ceux lá) s´est Remis a se deplacer .
(l´eau de source vient de bouteille ´´Evian ´´ , a 2€ le litre au distributeur autmatique , le seul comerce ouvert apres 22h , qui est dans le quartier á coté , Saharasien - persone m´a agressé .
Un et une sur le trotoir . se tait : ´´ tu viens avec moi ou tu reste seule ?! ´´ ton agressif .

GB exp ~17.03.24 Note 2

en passant ; les vers Sont aussi faits de segments , de boules , de cores d´anamoles et krw ,
Vu chez les Moyens , les gros et les larvae de forme Plus orgonomiques (une aile de Core)

~



e.g. ; Vu au microscope (un des ´´ gros ´´) (edit apres : Mort figé)

Téte Suposée
avec bouche gueule , nez
oeil derriére peau (tache noire derriere
plus grosse tache claire

Sur le dos ; poils á chaque boule , 2 ou 3 , ou 4 , pas beaucoup ,
Jaune brun clair
Tache noire sur chaque boule , parfois plusieurs par boule je crois .
Reste de segment est plutot blanchatre une fois grossi et bien éclairé , Sinon , le ver est globalement Noiratre brun .

(edit aprés ; certains ont des poils sous le menton . oui c´est la téte
Un ver ne bouge que lá si cherche vie)

Si tete supposée est bien téte , (elle Ressemble beaucoup á celle d´un chat par ex. , quelque chose de Noble)

les sorties de Sup du corps Seraient les poils , passant le Trou du Core des boules (qui seraient les taches noires , le Nucleus)

Clairement 2 sens ; Celui qui va vers la téte , Celui qui va vers la queue (une fois ingestion diverses)

Partie Sombre de l´autre coté , queue ?
avec touffe de poil - Serrés (en Tube ? en balai ?) assez courts ,
méme couleur

(Microscope faible qualité (utilisation d´un éclairage exterieur et desactivation du sien .) , grossissement minimum (edit apres ; 60X et 120X) vá jusqu´a 200X)

GB exp ~17.03.24 Note 2 suite

edit apres ; Tous mis dans ORAC ~ 10 Minutes .
y en a 3 qui bougent bien plus .
Remis position initiale

1 vu au microscope mort se decomposant
(entouré de orgonomes , blanc, (faits de bions) vif
de formes variées , ´´Nuages ´´ ... dans l´eau .

GB exp ~17.03.24 Note 2 Suite

Tous les Vers Morts figés ,
ont la queue , rectum vers l´arriere .

Comme les pigeons vus
Comme dessin de R. (cuirassage , fct. orgasm)

Comme dessin dj ; eg (le tronc , plus droit que ća)

~ 11 h , il reste 1 vers vivant (Mais entouré de blanc , flotte) et 2 larvae (Surement des moucheron) avec 2 antenes) flotent

edit lendemain ~ 2h Le Ver est figé mais flotte encore .
Une des 2 larvae a ´´eclos ´´ , Nymphe ouverte , Moucheron au dessus (qui était la hier aussi)

letter essay

Is it too much to ask to be a little proud (not of me , I don't care) But of having been part more or less active in these discoveries ? in particular of the EA . (Especially you Mr. Demeo for the precise description of the geographical area of Saharasia)

Here , some effects , observed , to give you a better idea of the dynamic of EA

Auroras of ~ May 10, 2024
they have not been anywhere other than in EE on the entire planet , because this is where it circulates . That is to say , not in the center of Australia for example , But in New Zealand , New Caledonia , Indonesia etc. .
They were visible for 2 things ;

1 : Because We are at the peak of the so-called ´´ Solar Spot ´´ . (which on the sun is only an effect (the visible whirls) of the same phenomenon that is happening here ; the trough or the summit of the galactic flow where We ArE , as well as the Sun and the others . (every 11 years) . It has for effect , stimulating the energy already here and making it visible in a lot of colors (the rays of the current G. are visibles across the Cores of the sky of here (it makes sorts of almost straight tubes towards the ground)

2 : second thing , right here , On earth , the Anamole of our celestial body has started again to circulate a little more properly since a few months , Which has had the effect of filling the sky/Heavens again in the places where it was no longer circulating . i.e. a larger quantity and some Cores more easily visibles therefore .

Volcanoes , earthquakes , etc.
Still to get a better idea of the dynamics of the EA , here , some places of Volcanoes and earthquakes over the last 7 months . Of which the most telling , for what is said here (the restart/Re-establishment of the EA in a more suitable manner) is obviously the Iceland Volcano . In C1, ES , Quite simply. which has not happened for more than 800 years (date when there was a small ´´ ice age ´´ on the earth (a drop in temperatures)

Recommendations on flight plans appeared in the media these days , showing ´´ turbulance ´´ in places where the flow passes .

Always to give you a Better idea of the Cores and anamoles which Circulate in us , above , below , on This celestial body and on the others , Here are two others photos of aurora having exactly the shape of the Core , (in addition to the one already sent (which it , is free of rights)

Finally ,
We have won a battle

Here is a photo of a new phenomenon appeared , some 50 years ago , right next to the Verkhoyansk mountain . Nearby the city of Batagay . ´´ a crater ´´ , ´´ a gate to hell ´´ , ´´ a tadpole ´´ ; so called which Recently makes the headlines of the American media because this phenomenon is active , and greatly . It's about , neither more nor less , of the proof that the EA makes itself its way back between C0 and C1 .
If this is true, and it is , it means that everything that is blocked behind C0 , which makes the Big Flame of our earth , i.e. its wound (which causes Earth Global Warming) has a chance of Go over/go back/resit finally return to the other side of CO . That is to say to calm the Flame , that is to say , here we have the Only possible Solution to the exit of the conflagration of the earth (and therefore of the Behaviors of all its animal species , become aggressive) which is taking place almost without interruption since ~6500 years (According to Dr. Demeo and the late R.)

Is this starting to speak to you or do I still have to down about 30 bottles of Rum , (something that I have done since the discovery of the EA) to forget that I am all alone ? There are still people , and near/next to C0 , who are playing/make toy with the nuclear bombs . Only One which explode at this place at this moment and it is literally the end of our celestial body/star . (by disturbing the flow)

PS , I add that the ETs are indeed Real , that they came after the 2nd world war to cease/Stop these explosions . only for that . I have never seen one , but I can affirm that if I were them , I would not have done better , than just playing this Military role of disarmament .

In short , we are all concerned by This flow between C0 and C1 .
whether it be me , the ETs , you , the most stupid/liars of Religious or despots , Patriarchs , all the Scum of devourers consuming animal flesh , whether it be the living Gods, Goddesses here , whether it be the worm of the fly in the trash , or the earth itself in it´s whole .

´´ passes over the Tien Shan mountain range. Flights here frequently encounter turbulence, especially during weather pattern changes ´´
https://www.airwaysmag.com/new-post/most-turbulent-routes.
´´ Following closely behind the Santiago (SCL) to Santa Cruz (VVI) route, which is the most turbulent route is the Almaty (ALA) to Bishkek (FRU) route, which experiences significant turbulence due to its proximity to the Tien Shan mountain range. The complex interaction between mountain-induced turbulence and varying weather patterns make this route one of the most challenging ones. ´´

E.P.R.

´´nuclear´´ , bombs ... following

Ding Xin military airbase (~´´Dunhuang ´´) ;

(between Lop Nur , Daoban & Jiuquan / Jiuquan Satelite launch Center)

Dimensions and description of the site;
~ 40 km in length x ~ 10 km wide

Shooting stand
It is a matter of a shooting stand for aerian weapons.
Explosions craters are visible everywhere, there may be a thousand or more, each more than 2 m wide.
Many traces in the sands are difficult to interpret , possibly other types of impacts (by other weapons that the explosives of the bomb type, possibly by satelite or other vehicles) , in addition to the traces of construction vehicles, (typically with two lines (four wheels of a truck or the channels of a buldhozer, many traces are monobandes of variable thickness, surrounded by possibly earthworks and sand arrangement)
The military base would be under the underground, you can see the entries of vehicles. The base would be currently inactive following an ´´accident´´ of a weapon development. But we can see recent changes, such as new installations to explode, with others vehicles to aim/vise in the middle (than those visible on the photos of the previous years.)
Most sites are installations set up , with vehicles in the middle to aim/vise and explode/move. (construction trucks, buses, cars, vans, deteriorated passenger aircrafts, old fighter planes, more recent fighter plane.). A site would be a field of antennnes like the antenna field ´´HAARP´´. The form, the orientation, the clarity, the size, of the giants Grids or squares is ´´astonishing´´

Dimensions and description of one of the ´´grids´´ visible;
~1.06km long, ~400m of thickness. Each grid bands makes ~30m wide.
It is yellow and clear, like a layer of roller paint, (done possibly with squares of alligned colored sands. (The ´´wind´´ has spread out and drifted certain places in the sand sandly colored.) . Traces of emission at the left (different than those of the ´´wind´´)
Pour cette grille, on peut voir sur une ancienne photo, que quand elle fut en construction, il y avait des sortes d´éclairs de sol blanchatres, dont les ramifications correspondaient exactement aux ramifications de la grille (á ce moment lá) Comme si elle couvrait ces éclairs de sol.

E.P.R.
´´electricity´´

and if the krw , the anamoles are the parts of the gods , goddess ,
just as the anamoles are the parts of our bodies (orgonoms animals) ,
that what we call ´´electricity´´ is done with the same energy ,
then the electrical manufacturing process is painful
and it would be good to use it less .

Manufacturing process of electricity :
Transformation of forces , of natural movements , by making them turning some metal in some metal , a rod in a coil . The metal rod is turned and the coil remains fixed . Metal attracts the e. , which is everywhere present , and therefore around the rod and the coil in larger quantity than if they were made of stones or wood .
What happens is a crushing , of the surrounding e. , between the rod and the coil . to such an extent that the surrounding e. attracted , has only one possible escape , to pass into the metal , rather than just stay around while being attracted . Once passed inside , the e. follows the shortest path to get out of it . That's where there are the wires , the ´´electric´´ wires , isolated from the outside , in plastic , until the ground/earth , or the water , where it will be able to go out again .
Between the two , the crushing/grinding and the escape , are placed the obstacles (the "uses" of the e. , crushed, condensed, seeking to get back out from the metal, ´´electricity´´) , which are diverse . For example , Retransformation into movement , with approximately the same system of the rod and coil (spiral of crushing and condensation) , or into heat , by sending a very large quantity into the wires or tubes of metal , which are not isolated from the air or from the water (water isolated from the earth) . Quantity here means ´´voltage´´ (´´tension´´) and ´´Amperage´´ (´´intensity´´) , the two in great numbers , in non isolated wires or tubes, called ´´Resistance´´ Proportionally chosen in size and material so as not to yield (to melt) while being exceeded in possibility of absorbtion of electricity , and thus forced to discharge in the air around.

These crushings/grindings were extended to a large scale , including and especially on the greatest rivers , as at the ´´ Niagara Falls ´´ . Which means therefore that the anamoles of cores , at large scale , everywhere where there are these crushings/grindings and especially in the great rivers , are Not quiet at all .. but caught and imprisoned , grabbed/snached up and jailed/detained , condensed , deviated , crushed , grinded , sent elsewhere .
God/Goddess is not dead , he/she is ignored , tortured , crushed , assassinated/murdered , trapped/snared , ´´ transformed ´´ for mediocre uses , unnecessary and alternately replaceable by other means .
Imagine a so nice so beautiful pigeon , a so nice so beautiful hen pigeon , which devours the hand of you , the arm while ignoring yourself , if you don't run away, you are dead yes .
This is what we have been , letting the machines do , the ´´ technicians ´´ , the ´´ professional ´´ , the ´´ technology ´´ , ´´ the technological miracle ´´ .
It is not a coincidence that Niezsche wrote this sentence at the beginning of the ´´ reigns of the electricity ´´, at the commencement of the installation of the ´´ electrical network ´´ (of the crushing rods and coils) On the whole planet .

200 years ago ...

and now on the whole planet , there is a replacement of these air grinding Networks , by the use of the ´´ranium´´ , ´´radium´´ , ´´Nuclear´´ , etc. . i.e. , a digging and crushing of the soil/ground for the extraction , plus the related uses to make bombs of it , immensely destructives , plus the Noxious effects of the dispersion of these materials .
Imagine that the pigeon , in addition to devouring you the hand while ignoring you , it takes away from you the earth under the feet , it explodes you , yourself and your similar and pollute forever the planet .
This is what we have been by letting ´´the machines´´ do , the ´´ technicians ´´ , the ´´ professionals ´´ , the ´´ experts ´´ , the ´´ technology ´´ , ´´ the technological miracle ´´ . It is not a coincidence if nobody has written anything about God or Goddess at this epoch .

E.P.R.
´´ electricity ´´

earth not closed

The earth has never been closed .
Always in formation . One cannot say ´´ the earth ´´ as an object as such , a unit separated from the rest , She forms herself with the rest and , since she is not absolute unity , she has its own conflicts .
It is better to say ´´ there are conflicts ´´ and ´´ there are a circulation order ´´ , than ´´ the earth has its conflicts ´´ and ´´ the earth has a circulation order ´´ .
The celestial body forms itself by the arrival of EA (Earth Anamole) , which is what is seen by the others of the human specie as ´´ the hole in the ozone layer ´´ .

It is not the earth that makes grow the plants , but the plants that make grow the earth .

Just as individuals have never been closed .

There is a power , that of giving unite to non closed beings .
It is done with love, emotion (laugh , joy etc.) , arts , memories , decisions to exist yourself or not (as a point of view in the universe . etc.)

Sanders , Tian Shan , Iceland , Azores , Saint Helena

´´ a promise to make ´´

https://www.nasa.gov/wp-content/uploads/2023/03/709526main_cloud_vortices_full_full.jpg
''this true-color image of St. Helena Island and the band of wind-blown cloud vortices trailing towards the island’s leeward side.
St. Helena Island is a tiny island lying approximately 1,860 kilometers (1,156 mislands) west of Africa. Volcanic in origin, it has rugged topography with steep, sharp peaks and deep ravines. Wind, which can blow unimpeded for hundreds of mislands across the ocean, strikes the face of the mountains, and is forced around the unyielding terrain. As it blows around the island, the air spins on the leeward side, much like a flowing river forms eddies on the downriver side of a piling. The spinning wind forms intricate – and mathematically predictable – patterns. When clouds are in the sky, these beautiful patterns become visible from above. ''

The KRW is the message itself

No transport without an invitation message
In the years 40-50 , many saucers came to deactivate the bombs , play a military role to prevent the destruction of the EA , and , them too , participate in the fight against the deserts and the climate warming , (the pain of the celestial body earth) That they were called by some ET present on earth or by the earth itself , sending signs of distress by its Anamole , (the most probable) by contacting others celestials bodies (and therefore tribes/people (´´white cells´´ of these celestials bodies)) or by humans or other animals here who had more awareness and knowledge of the facts and history , it does not change much .

(⊙ think that this is the 2nd case . engender the coming at the right moment .)

Should know that
´´ Medium is the message´´ or rather ´´ Message is the medium ´´
that it is it which guide to the emittor . (Should have , to speak in ´´ Scientist earthly GIjoe ´´ , somes listening stations For administer them at their scale .) and Should propulse their jewels of vehicle with the message itself .
(It would be the perfect parade to the guilt of visiting other tribes/peoples , just as mortals , but less advanced , by not giving them known remedies and technologies , nor to ´´Communicate´´ for the infinite complaints of dyings , nor to save others oppressed species , destroyed by the sadistic food carnage here , etc. But to let them alone to cope themselves .
(and especially to that of consuming the e. of ´´stranger´´ entities (for some machines , Transports , etc. especially near the soil) .

That they are gone or remained depends of the messages , of the emitter, quality of the anamoles (of the EA and of others) , emittor health .
(e. possibly provided at the message, as a refund of defrayment)

LS LG invala

You are formed of Cores ,
You are crossed of Anamoles , as everyone , but have a main one . You are , basicaly , blue or violet or green , but sometimes you color yourself otherwise .
You are rather intermediare , between the Cores of the EA and those of the beings by whom you pass , that you nourish , extinct , direct or stop , etc. .
You are smarter than me , but less than the EA .
When you go around for a walk , often it rains where you are , because you attract what there is above and give it back all around you , or through , in white .
You also have a sexuality . I don't know your age , I don't know when you do .
You have an incredible patience , and at the same time , you like to move .
You are basicaly depressed , since there are not many people who are not afraid of you .
You must be , say , 100 m high , or more when it is good weather ´´ invala ´´

LS EA grandeur

EA , C2 is more than 80,000,000 times larger than my jaw (~15 cm) for example .

The 2nd phalanx of its index (~2 cm) is more than 7 times smaller than my jaw (~15 cm) for example .

The 3 works samely and have same shape .
And I am terrorized by the phalanx .

At whom my jaw have to talk to ?

It has never seen EA , C2 as a whole , and however have speak to it .
She has never spoken to her index as a whole, and seen her however.

My mouth silent itself or speaks in an order of magnitude of 600 millions times .

EA , C2 is more than ~12 000 000 times larger than my chest (~1 m) for example , and Italy more than 1 000 000 times .

LS A

. A blue flower in a field of blue flowers , discovers that it is blue .
It want to say it , but a flower , it does not speak .
And if they were speaking , they would say that they are not blue .
They would be lies and insuportable .
But if a blue flower it speak , if it is a field of blue flowers that speak , they all lie if one ask them their color .

. A rambler in a country of ramblers , discovers that he ramble himself .
He wants to work with the others ramblers .
But a rambler , it does not work .
And if they worked , they would work for not being ramblers .
They would be policeman , customs officers , prison guards , bureaucrats , computer scientists , and insuportable .
But if a rambler it works , if it is a country of ramblers who work , they are all policeman , customs officers , prison guards , bureaucrats , computer scientists if one ask them to work.

A rambler who wants to work hears a blue flower saying that it is blue .
In a field of lies flowers , in a country of policeman , customs officers , prisons guards , bureaucrats, computer scientists .
In a field where it speaks of yellow , orange , gold , red , which says to be green , and shouts being brown , between the comissariats , the customs , the prisons , the offices , the smartphones of a country .

The rambler worker listen the flower and writes that it is blue and publishes it .
The blue flower looks at the rambler and sings the work .
He pours it some water .
It open him its petals .

An Anamole of Cores in the infinite of the Anamoles of Cores , discovers that it is an Anamole of Cores .
She wants ... , but a Anamole of Cores it does not ... .
And if they ... they would be ... and insuportable .

An Anamole of Cores ... an Anamole of Cores ... that she ... .

LS Ravage language

star

astre (FR.) ~ aster (LAT.) star (EN.) :
(Celestial body , earth , sun , etc.)

Not possible to do the slightest internet search or other with this word without falling on the mean ´´ famous people ´´ which will inevitably send back to ´´ the sex it is cool for me but bad for you who envy me or who have not the money etc. ´´
, Everything simply says ; ´´ there´s no others celestial bodies ´´ & ´´ people are more important ´´
It makes a dichotomy/separation between ´´ cosmic ´´ and ´´ living ´´ (people , make-up animals (and more an animal has the look animal (i.e. has sexuality) and the more he/she is made up) , it makes a dichotomy between earth and the others

Celestial body (EN.) Cannot be suitable for the earth (´´celestial ´´)

(You might as well ask a machine that only says ´´yes´´; ´´ I am wrong ? ´´ Except that is really specially targeted this word .

LS Ravage language

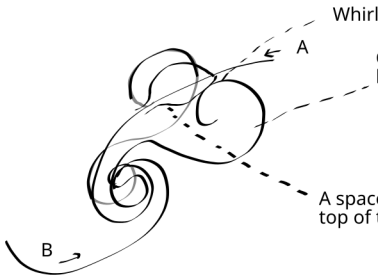
LG

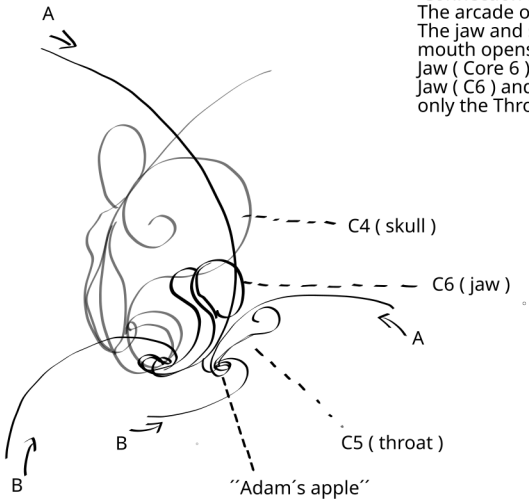
LG C4 (skull) Baldness ♂



Whirl hair
A
Charged part, it makes hair , hairbreadth , fur .
A space between the BWs of the Core is on the top of the head, it does baldness of the ♂
B

Remains the Whirl in the hair at the rear of the skull, they should be two, on each side, at level of the ears, ES of the BW. But it is alone, between the BW, at the top of the Flame.

LG C5 & C6 Throat & Jaw

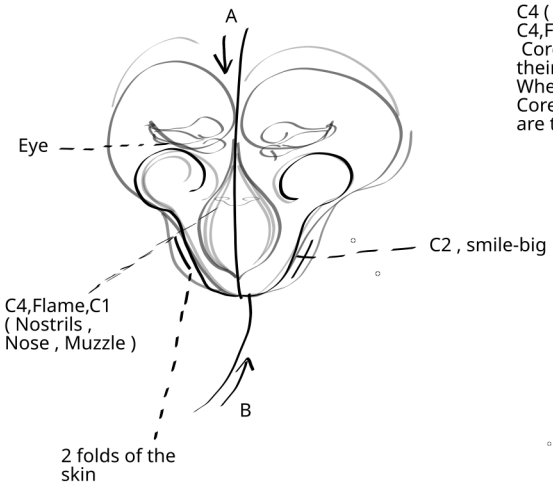


Connection between jaw and skull.
The arcade of the skull is thick.
The jaw and skull remain independent, Mobile following the direction of A. (when it is in the adequate direction , the mouth opens and can pulsate.)
Jaw (Core 6) is more developed, face toward the bottom
Jaw (C6) and Throat (C5) alternate. They are a bit like a Core that changes direction (unstable) Most of the time, only the Throat (C5) is active.

C5 , A ; The same as C0,C1,C2,C3,C4
C5 , B ; Exterior.
C5 , EE ; Bone & beard
C5 , BW ; At the rear of the cheeks that ´´fall´´ onto throat. (and bones, bumps under the jaw (C6))
C6 , Flame ; The Flame/Flogos (the hole of the Core with the Nucleus) is the larynx
C5 , ES ; Voice, cry/shouting, ´´clearing of the throat´´, coughing, etc. (in the direction of the exterior of the Anamole Orgonome)
C5 , Base ; ´´Adam's Apple´´ Male. Moves, like all the Bases to make the SS.

C6 , A ; Comes in the opposite direction of C0,C1,C2,C3,C4,C5.
C6 , B ; Exterior, comes in the opposite direction.
C6 , EE ; Bone & beard
C6 , BW ; Rush/goes into C4,BW,EE,Bottom (~ arcade of the skull). And beard
C6 , Flame ; The Flame/Flogos (the hole of the Core with the Nucleus) is the entrance of the esophagus (in the throat)
C6 , ES ; Ingurgitation (in the direction of the interior of the Anamole of the Orgonome) .

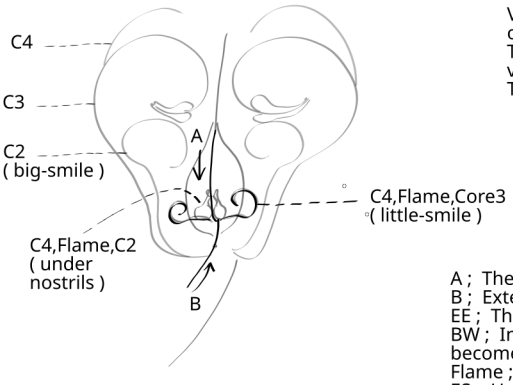
LG Core 2 Smile-big



Active when influx. Makes rise up the ends of the mouth, lips because it raises the perimeter of the Flame of C4 (skull) and of all the Core of under the nostrils , which raises the upper lips. (or the lower ones too, if C4,Flame,C little-smile is not active)
Core 2 precedes the development of the eyes (C3), of Skull (C4) , and of the following ones, proportionally , their BW are in continuation by following themselves .
When active, the ES of the BW of C3 which open the eyes, the swellings of the eyelids that make the Wings of a Core around the eye, cannot occurs because the C3,BW,ES are discharged due to the influx into C2 ; The eyes are therefore rather closed.

A ; Comes from int. , it is the same that C0,C1,C3,C4,C5
B ; Comes from ext. , il fluctuate a lot.
ES ; Tongue.
EE ; A fold of skin on the cheeks.
BW ; The two very pronounced cheekbones (bump/little apple) under the eyes.
Flame ; A little smaller than that of C4 (skull), it does not include the nose. The teeth are visible, and thus, the mouth ´´burn´´ ; i.e., place of exchange between the exterior and the interior of the Orgonome, the only place where it can emit something.
Base ; The same that C0,C1,C3,C4
ES ; Word, or laughter + breath/blow/flow towards the ext. of the Orgonome.

LG C4,Flame,Core 3 Smile-little



Very small compared to the big smile (C2) . It pushes the flesh of the cheeks beside and above the ends of the mouth´s lips and like that does a hollow inside them. Its base is the bottom of the upper lip.
This Core has its two Wings very apart when active. So much, that a Flame may not form, or it may be very wide.
The lips of the mouth are closed.

A ; The same that C1,C2 (big smile) ,C3,C4.
B ; Exterior. A little higher than the mouth (maw).
EE ; The top of the upper lip of the mouth.
BW ; In the cheeks, not far from the end of the lips, a very visible and curved fold which rises and becomes even more pronounced.
Flame ; Not very visible , instable, mobile .
ES ; Unknown.

A comes from vertebrae /pelvis

C0 Tongue ES ; Tongue
↓
C1 Chin ES ; Tongue
↓
C2 Smile ES ; Tongue
↓
C3 Eyes
BW ; C0 Eye ↓ ES ; Tongue
C1 Eyelid lower ↓
C2 Eyelid upper ↓
C3 Dark ring ↓
C4 Eyebrow ↓
↓
C4 Skull AS ; C Front, wrinkle, ´´thinking´´ (Head ´´fried whiting´´) , eyebrows inverted
Flame ; C0 Nostrils
C1 Nostrils under
C2 Smile little
C3 Lip lower
BW ; C1 Ears
C1, BW lobe and inner lobe
ES ; Tongue , Breath
C5 Throat Base ; ´´Adam´s apple´´ Flame ; C Larynx ES ; Tongue
C6 Jaw ES ; Gulp down
C Teeth
C Hair , hairbreadth , fur

A Comes from Flow sexual

C Skull 2 (BW makes the cheeks Femina (A toward the top , Flame toward the bottom)

↓ = continuation

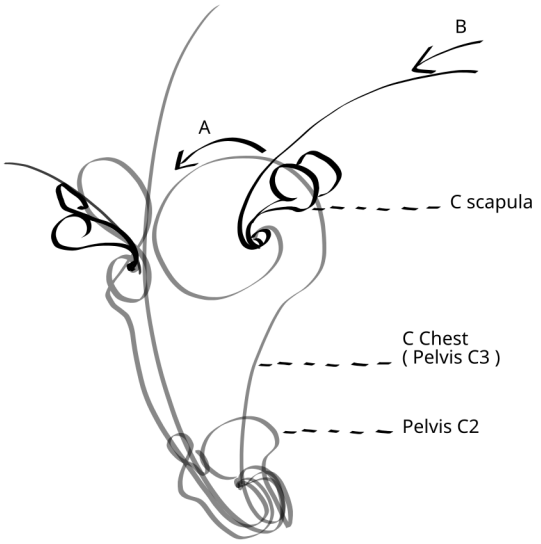
e.g.;

LG , AO , ¨Homo-Sapiens´´ , C4 , F , C1 ; Refers to the nostrils of a human.

~20 (~30 with doubles)
+ 32 teeth
+ hair
+ wrinkles

(Possible evolution ; a C in continuation rearward C4 (skull) = Cerebellum , then Vertebrae)
(The whole is ~5 or 6 or 7 Cores directly added to the number of vertebrae. 23 + ~7 = ~30)
All the A of these ~30 are the same and come from C Pelvis.
All the B of these ~30 are exterior
All the A and the B of C0,C1,C2,C3,C4 pass by C4,Flame
All the B of C0,C1,C2,C3,C4 come first under the tongue (C0)

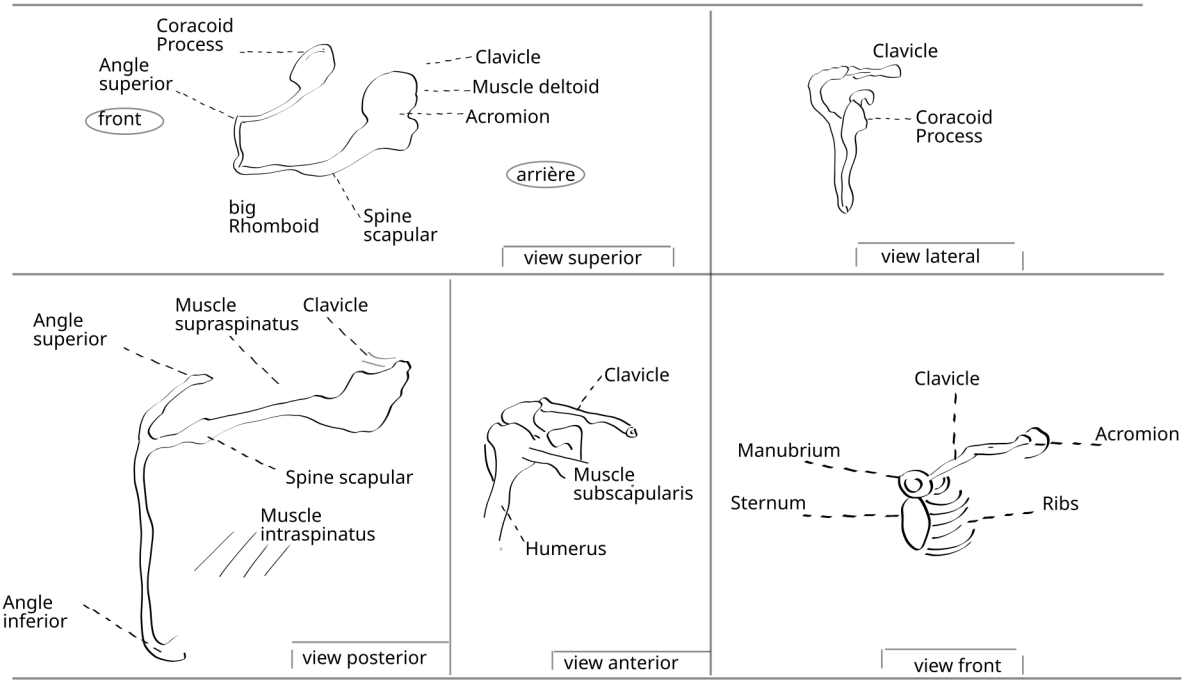
LG AO Chest Core Scapula (Shoulders , Foreleg & jugulum)



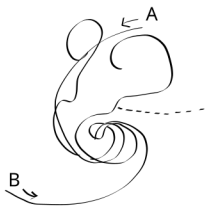
- Connected to the Humerus (legs C1) which is between.
- This Core may be the source of the wings of others Orgonomes.

A ; Comes from the BW of C Chest (Pelvis C3) ; C Chest,W1,BW,ES & C Chest,W2,BW,ES
B ; Comes from the exterior by the forelegs (humerus), or not by the forelegs.
ES ; Liver & heart
BW ; Shoulders (one Wing is bigger than the other)

Reference; (drawings of drawings in an anatomy manual (bones)) Scapula Trapezeum



LG Pelvis C2 ♂



there is somethink like an inward indentation at the beginning of the BW.

LG Urinate ♂

wanting of less wanting

The wanting of urinate fluctuate following the position of the body and the distance of the arrival of the flow respectively to the pelvis .

LG ~correction Eating

Food not only blocks the flow, but also attracts it.
It is needed to push the solar plexus (plessus/disseptum/praecordia, Chest (Pelvis C3) (Arrival of Sup. , Entrance , Atrium)) .
This is the function of the esophagus.

LG Teeth

When blocked at AO , C6 (jaw) ,
The teeth are attacked by the surrounding e. . Like rust on iron .
It is an ´´oxidation´´ . The Anamoles need matter to live, matter to transform, like combustion .
So , toothaches can be calmed , for example , by defecating (i.e., by releasing some e. at the bottom , at the pelvis , and thus drawing some e. by the head , and thus tightening or removing what is circling around the head .
Who would have guessed ... ?

LG , AO inventio Coughing without fear

As soon as an orgonome decides to take its eyes off of what it is watching or fearing , another orgonome (of the same sex) , it cough.
It thought , ´´ Ha , how he's working well ! ´´ or ´´ Ha , he's walking well, and I know how hard it is to walk. ´´
Respect, and empathy.

LG AO CS Grumps

They're all in some Anamoles of Cores.
Taking a little of it, or making it to move, is enough to annoy them. They cough , grunt , hate , scream , betray , etc.

LG , AO CS rear Leg

Legs flow towards pelvis (Pelvis C2) , rear of thigh (~C2?)
Seen in a ♂ , the BW on each side of the ´´patella´´ (FR; rotule).

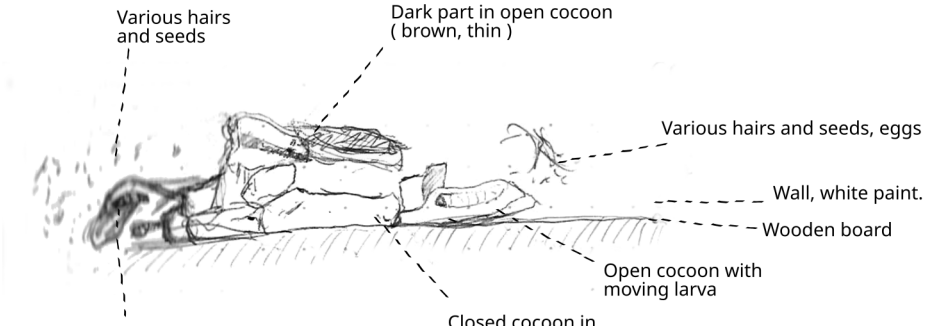
LG AO Hypothesis praetermitto EA - AO

praetermitto of Earth Anamole & praetermitto of Anamole Orgonome are the same. (C0 , Flow) is blown and prevented by (AT , C2 , W2 , EE) (AO , pelvis C3 , W2 , EE)

LG Moths AO CS "Star"

Whitish lines in a bowl to catch a dirty water leak coming from above.
They intersect in two places, forming stars with thin, neat, straight branches. It looked like frost (it does not freeze), so ⊙ looks closer; in the middle of the largest one, there is an insect, a ´´moth´´ (a silkworm's midge/butterfly). It/he/she is struggling at very irregular intervals. ⊙ pull it out with difficulty, it/he/she falls back down 2 or 3 times.
There were between 5 and 8 branches to this star. ⊙ did not notice it in time. 2 minutes later, falling drops scattered everything.
This gave precise and indisputable information of the number of KRW to which the moth was connected .

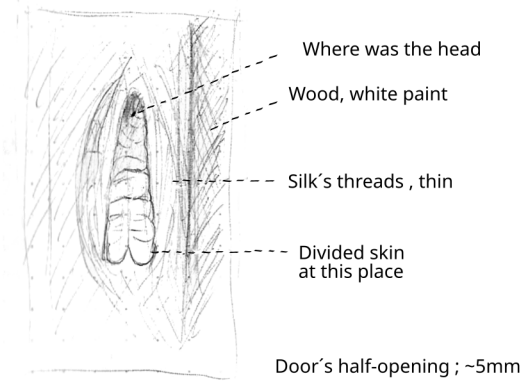
LG Moths Cocoons



Various hairs and seeds
Dark part in open cocoon (brown, thin)
Various hairs and seeds, eggs
Wall, white paint.
Wooden board
Open cocoon with moving larva
Closed cocoon in silk´s threads
Kind of smaller, orange larva, does not move.
Middle of the cocoon.
It/he/she is also a little ´´bulbous´´ with segments.

The whole is brown/gray.
Age: over 5 years. In a small kitchen (shelf on the East , Northeast side)
It's probably in the small oranges that the change makes itself, then the dry skin opens and the winged moth emerges of it. It seems that it is the skin of the larva, of the the worm, that makes the nymph , by drying and shrinking the size of the worm .

LG Moths Nymph opened out



The dry orange skin stay at the middle of the cocoon. The moth at the step ´´imago´´ is gone.
We can see that the ancient skin, still with the stria of the ´´segments´´, is openned out at the bottom, it has the shape of the wings that the moth acquired.
The cocoon were suspended and glued at the wood. Nymph rather big, worm´s size, ~7mm. No others cocoons around it.

LG Moths back / vertebrae

The opportunistic study of moths and their metamorphosis , seems to show two directions of circulation. Not really sure, but it could be ;

Larva; The direction of the Flow descends along the back with Flow ingestion , and therefore movement of the larva.

Nymph: In the cocoon, the larva is at rest and there is a change of direction , then the Flow goes from bottom to top along the back , which would form the Core of their wings (under the membrane (dried skin) of the nymph). This nymph opens at the level of the BW of these wings, which would have pushed against the skin to exit. This divides the old skin right in the middle.

Imago: The moth exits through this opening at the back, then abandons the cocoon.

(For the vertebrae of the Anamole Orgonome , this therefore shows two directions of circulation.)

LG δενδρον LS Maple (FR.; Erable) Bisamare

Acer platanoide Acer pseudoplatanus ; lives up to 500 years , fruiting at around 25 years.

Erable Sycomore ;

Erable ; FR. ; (´´er´´ ; acer) (´´able´´ ; Pomme (~apple ?))
Sycomore ; (Sukon ; fig. GR.) (Moron ; Blackberry . GR.)
Samares ; A wing of the fruit of the erable sycomore (maple) (or ´´pseudoplatanus). With aligned or convergent wings.
Bisamare ; double samares , two wings , (neologism dj.)

LG δενδρον fruit frutcor(A)

The fruit of a plant is always formed of one or several Cores.
The ´´hole´´ of this or these Cores, the Flame is a blending of the plant and the flow of the Core, that gives to the plant a weaker density, in which the plant still can to emit , to ejaculate , to push outside , it create the seed (the Nucleus) , exactly at the Base of the Flame . This is the only place of the fruit that comes from the plant . Everything else comes from the exterior .
It is as if the Flame , in its direction , would draws the sap from the plant .

The fruit comes from the exterior , the seed comes from the interior , the Flame is the blending

LG δενδρον fruit flowers 13/04/25

Along the avenue of the prouds ; two species of plants whose flowers are in Cores .
Yellow flowers make up ~50% of all these. Ball-shaped, on the top, ~15 developing flowers, on a ~70cm tall stem . The Core is formed during the growth of the flower's petals, then, once it opens, the two BW pass inside the Core, rather than expended with their EE in the exterior as usual. Which explains why it was not too visible.
Some violets , ~30% of all the plants in the avenue, which are on small shrubs ⊙ believe. At first glance, they look like little bells, but they are indeed some Cores , absolutely Cores , which are hanging like that. They are a little smaller than the yellow ones, about 1 cm.

LG δενδρον fruit CS Walnut

The core of an open walnut is visible in the center of the shell , in the length direction , perpendicular to the plane of the shell's opening .
It has all the usual properties , it is thin/fine , and on the exterior , it grows/push laterally on both sides , until that the two Wings comes into contact with each other . It is here that there is the shell´s cleaves , by which it opens later .
The soft walnut , its ´´flesh´´ , is maybe the very big seed that has exceeded the Flame .

The perpendicular Core .

LG δενδρον fruit Shell Flame

⊙ have picked a fruit from a tree of which he does not have he name. We can see that the fruit does not have the shape of a Core. However, it has the exact shape of a Flame of a Core . This means that the Wings of the Core did not form solid matter. The Wings, with their EE and BW , were simply there at a fairly low density , but there nonetheless. By opening the fruit, we see that the Flame is also divided in two, like the Wings of a Core , and it is this Flame that formed the shell of the fruit by overflowing laterally until the two Flame´s part were in contact with each other. This creates small bulges on each side of each part of the Flame. A part of a Flame is thin. There are two seeds (Nucleus), one on each side. They are large, do not fill the Flame , they have grown as usual , at the Base of the berry. They seems like “coffee beans” a little longer and thinner.

The Core is around, it is the Flame that makes the shell.

LG δενδρον fruit Berry (blueberry , redcurrant , blackcurrant , ...) hypothesis

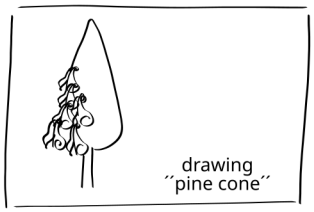
Let's say a gooseberry. We could deduce from the previous example that the Core , the Flame are around a berry , but do not form a shell , because a lower density. The seed still forms some matter , it is by itself alone , what is easily visible and palpable. If this were not so , the seeds of the plant would be contained in the gooseberry . ⊙ have not checked but it is probable that the whole gooseberry is the seed itself , coming entirely from the plant .

LG δενδρον fruit Berry (blueberry , redcurrant , blackcurrant , ...) hypothesis

of those red things that are said to be poisonous.
⊙ has opened one that was already dark (unlike the vivid young).
Inside , two parts occupy the entire shell (the red skin in drying have hardened and thickened (~1.3 mm)) . One of the two parts is bigger than the other , at least twice its size. They are very hard , brown , and when scratched , a little white. (could not damage one with a fingernail.)
Not achieved to know if there is an entrance on the underside or if the whole thing is a seed , as supposed. Maybe this is a bad example .

LG δενδρον fruit Magnolia

There is some kind pine cones , cone-shaped , on which there are at the same place flowers , fruits . The cone is made up of Cores visible on the surface (seen from behind and from above) , which are in the from bottom to top direction.
(Base at the top , BW downward.) ~8 to 12 Cores in each column.



drawing
´´pine cone´´

LG δενδρον fruit Special

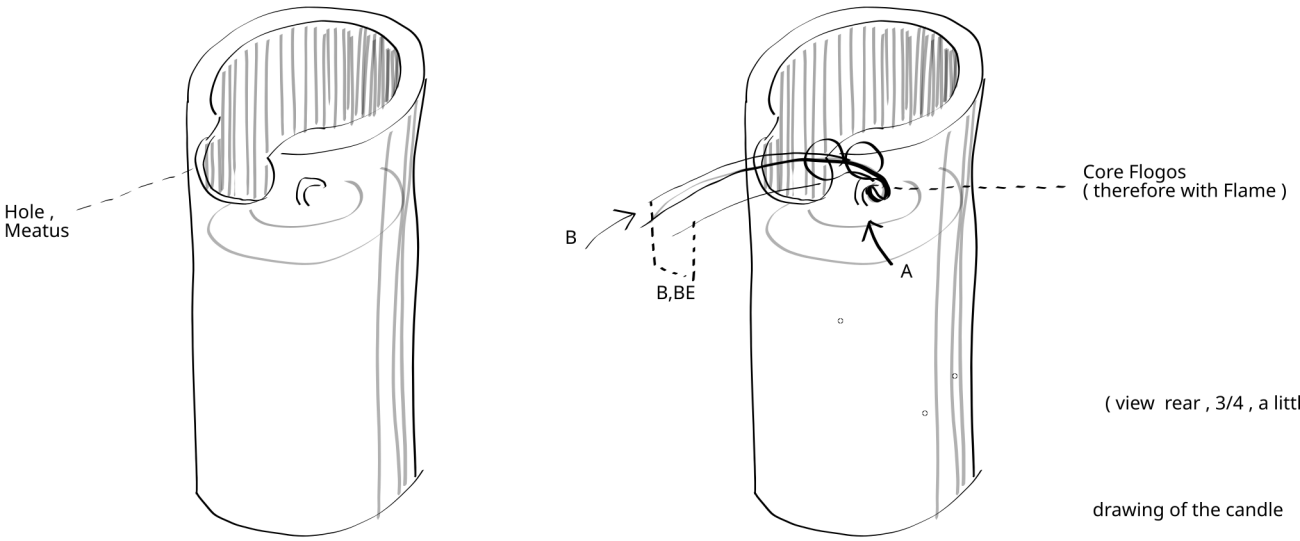
A fruit made with 3 wings.
Very special therefore.
Even more special because the general shape of the fruit is a heart (as how it is popularly drawn, and pointed/acute) , hanging in bunches of about ten at the tips of small trees. These hearts are golden, completely gold in color .
Even more special because the shell of the heart is made with three leaves from the tree , glued together at their ends , the tip of the leaf downward . Between this heart in triangle , there are the seeds , small hard black balls at the base of a Flame. But this Flame, this hole, is itself at the center of a first Flame, which is the shell of leaves made of three little flames (FR.; flammèches). The Wings of this Core or these Cores are therefore not made of material in the EE .
And if this Flame has three little flames for parts , then the Core had 3 wings. Never seen before !

LG δενδρον fruit ref Cloud , voc

“ Pollen as anti-oxidant and anti-bacterial potental ”
“ Stryphnodendron. Phenols and tannius in ethanolic extract ”
“ Polyphyllum ”
“ Conidiation , Sporulation ; fungi kill (aphid juice , e.g.; A. Craccivora ” (~3 to 5 days)
Ipomoea hederifolia; cordiform leaf
Adaxial (looking toward the ground , leaf seen from above)
Abaxial (looking toward the sky , leaf seen from below)

Flogos Meatus (LAT. ; Meatus ;Passage of the air ... .)

Seen on a candle. The flame was small , about ~7 cm deep , in a candle cavity , surrounded by about 1 cm of wax , until the top. (The candle was about ~7 cm in diameter , cylindrical , white .) . The cylinder of wax up to the flame was regular.
⊙ have lit the wick , after a few hours in the night with a flame less than one cm , ⊙ extinguished it when waking up in the morning . A little later , two or three days later , ⊙ sees a shape in the regular cylinder . It is a hole , about ~2.5 cm . ⊙ thinks that maybe this is by this way the flame was breathing . If this is the case , the wick should be aligned in some way with the hole . ⊙ check ; this is the case .
From the almost perfectly round hole , it is seen from the rear , curved forward (With the ashes at the end of the ES) .
The hole is therefore the way where the B of the Core of this combustion passed . Looking better , the hole is an almost perfect cylinder until the wick , inclined through the wax cylinder .



(view rear , 3/4 , a little from above.)

LS language, corder ..

- So much of put in in Corder of the things was necessary to find this Coredinate system .
(EA, C2, W2, BW, EE) .

- Life is movement , language too . It was lost itself without a Exit Superposition .

- Searching to make an alphabet understandable by the other animals have showed to ⊖ that it is we who did not have one of it .

- Look at the plasma around you .

- Carpe diem , non arboris .

LS Ravage language Enerver

FR. ; Enerver; To get angry , to be agitated , ...
LAT. ; Enervare ; to withdraw the nerves , to weaken , ... (e - nervis)

= Contrary = Forced silence for a weakened person who cannot be understood . = Forced lying for an angry person .
= Dispossessed of language .

LS Ravage language Depression

EN. ; Depression ; ~psychic malaise , unhappy ... .
LAT. ; Depressio , onis ; to press from top to bottom , lowering .

= Depression in EN. is exactly the contrary . Because it is by this movement that a body gets better (that a Core goes towards its ES) .

LS Ravage language Espérer

FR. ; Espérer ; (EN. ; To hope)
LAT. ; Exspes ; (ex - spes) , without hope , who/which are hopeless .

= The contrary

LS Ravage language Discret

FR. ; Calm , not exuberant , not strong , ... (but incluate)
LAT. ; Separated

= ´´ Be discreet ´´ = Be somewhere else !

LS Ravage language Concurence

FR. ; Concurence ; Competition , aggressivity , commerce , etc. .
LAT. ; Concurrere ; to run together , to move oneself (1) To run in such a way as to gather at one point. (2) To join ourselves. (3) Conflict, contest.

= Contrary. The meaning (3) has survived, not the others. = no friendship = rejection of KRW = no coitus .

LS Ravage language Anima

LAT. ; Ănimālis, e ; (1) [substance] ´´formed of air´´ , (2) animated , alive (3) [material , physical , opposite to spiritualis]
LAT. ; Ănimă, ālis ; (1) living being , animated being , creature , (2) animal , beast [insulting term] , Sheep [Christians]

= The confusion was already present for the Latins
= Homosapiens species rejects its animality , reject the other animals , , reject its soul , reject the physics . etc.

LS Ravage language Specism

EN. ; Specism ; Pejoratives discriminations of animals following their specie .
LAT. ; Specie ; aspect , appearance... (FR.;épice , EN.; spice)

= There is no discrimination in this term in Latin.
= Anti-specism = to blind oneself , ´´ anti-seeing ´´ , think that there is not appearance , no aspect , etc. .
= The good term to say discrimination based on appearance is ´´intelligence ´´ (Lat. ; Intelligere ; (inter - ligere) ~ to choose between ...)
= Ther is no good term to say that one is against pejorative discrimination based on appearance . Because ; There is no good term to say that one stand up for pejorative discrimination based on appearance . Even if we say something like ´´ Bad intelligence ´´ or ´´ intelligent killers ´´ , it cannot fit what we want to say , because ´´intelligent´´ popular meaning is always positive (~´´a good person´´) .
= vegans cannot say ´´ I am anti-specist ´´ (or he/she becomes blind , a militant for a general blinding) , and cannot say ´´ I am intelligent ´´ (or he/she is forced to discriminate between species at the exact place where he/she is trying to make bridge between species) . But
= butchers can say ´´ I am anti-specist ´´ (because he/she is blind) , and can say ´´ I am intelligent ´´ (because he/she does discrimination between species) .
= contrary = no way out = a big trap

LS patriarcat

- Women are used to be aggressive towards men , by men , who thus are not accused , and it is impossible to accuse women of aggression.
That is patriarcat . It is its main weapon.
(They are also used by a few women in high positions within the patriarcat .)

LS EPR technocracy

Technocratia = Science for machines ,
Machines for enterprise owners ,
Enterprise owners for people ,
People for the police and the prisons .

LS Ravage language Advertising

EN. ; Publicity , publication
LAT. ; Animadvertere ; to notice , to turn one's soul towards , to turn one's attention towards , ...

= They have removed one part of the word , the one that makes it clear of what it is about .
= advertising everywhere = stupids/fools/morons everywhere .

LS Ravage language Vix

FR. ; Pharmaceutical brand for colds . A baulm to put on chest . ´´ Put some Vix ... ´´
LAT. ; Vix ; with pain , with difficulty , ...

= Put some pain and difficulty on your solar plexus .

E.g. cornuatus name ; ´´ easy ´´ .

LS Ravage language to go (m/f)

Verb ´´aller´´ (FR.)

♀ ; ´´ You go and you come between my loins ´´
♂ ; ´´ I go and I come between your loins ´´

Same word for both sexes , but reversed .

For ♀ ´´ go ´´ means to go away towards the outside of ♀ .
For ♂ ´´ go ´´ means to go towards the inside of ♀ .

E.g. ; Gainsbourg. ; The decadence (original in FR.)

= Lovers are not going anywhere. They camp on the same spot. They stay and make some on-place.

LS Ravage language Historia

LAT. ; Historia ; (1) Story , relation. (4) [Chret] Story of facts , opposed to their interpretation .
FR.; Only the meaning (4) is retained.

= History without relation = internet Bigdata = libraries overflowing .

LS Ravage language Deesse (FR.) (EN.; Goddess)

FR. ; Déesse ; Goddess , feminine God .
LAT. ; Desum , es , deesse ; to miss (de - esse).

= ´´ The goddess is present ´´ is impossible . (The woman I love, etc.) Sexuality.

E.g. ; LAT. ; Dea ; feminine God .
E.g. ; LAT. ; Adesse ; present , to be here (ad - esse) .

LS Ravage language Firmament

FR. ; In the sky , celestial vault , a distant place where the dead go .
LAT. ; Firmamentum ; That which strengthens , supports , props up .
[Rhet.] The essential point (Firmare)

= Blatant lie in FR. dictionaries = absurd?
= the dead strengthen .

LS Ravage language Idea

FR. ; ´´ You have ideas ´´ = repression
LAT. ; Ideo ; For that ... .

= Search for cause = repressed .

Invala LS prayer bug

- True , God forgives , the difference with all the moaning of past Prayers is that we can forgive ourselves .
And that , as a result , it makes us wonder about the usefulness or existence of the Gods , as well as about prayers .

Invala

ζωο-φυτον ; intermediary between animal and plant . (FR. ; Zoophyte)

Invala LS die above

There are , above you, some memories working tirelessly to make you accept them . Until they break themselves from exhaustion , from scraping away your corruption and polishing your appearance. They are out of breath (their breath , not yours , exhausted).
You cheat , you lie , you sleep . They die . You remain empty , not knowing who you are , who you were .

“ Hands broken , like their memories . ”

Epilogue A LG dj

Free.
The most important is to unbuckle , not necessarily to unsuperimpose .

Epilogue dj repeat plasm

- Death ; fatigue from the repetition of the sticky of the plasma in front of the face , which one is planned in advance , out of habit , and which we let come and happen . Fatigue of the repetition .

Epilogue Image of the woman , The despite and the law .

Image of the woman , The despite and the law .
For having continued , despite the fact that the others who made ⊙ feel guilty about loving women were women themselves . Representation of women always under attack , heterosexuality and art and truth, etc. even if they never really attacked , they always pretended , they were liars therefore . That was sufficient for the real attack , the one that break the image of the other sex , and thus break the happiness , the enthusiasm , the intelligence , the audacity , and everything else , by making to hate the woman . Hate because disappointed and thus tormented always for no apparent reason . Always in silence , they are always defended by a man with a strong Oedipus complex (desire for the mother , submission to the father) not resolved , some aggressive men , always young and smiling , and visibly stupid , yet convinced and proud to act in defensing the woman , the mother , always dependents and violents .
The fight was not to hate the woman and to recognize that these were threats , which formed the real attack as such . The threat is the attack , because the plague-ridden know well that there can be no sexual desire with threats coming from one or more women , a single threat , founded or not , is sufficient to break the entire earth , the future , a being , a lineage , an animal species , the universe .
Perhaps this is the value of the past work of ⊙ , (of having done and written in such systematic contexts) of inflicted disappointments , of mental torture , of blindness , of cruelty of despair imposed , of feigned ignorances , of crude lies effective and manifest , of frustrations , of relentless moralism , always in the name of “the justice” or other “natural” , “common sense”) . A value maybe greater than having discovered so many things. To have transformed himself into a self-satisfaction machine , to constantly reward himself for still touching the truth.
Castration complex, image of woman.

Yet , the Anamole of Cores of Earth is more important . The fear of ⊙ is to see what always happens , happened . That the same people who have thus prevented ⊙ from living and from discovering use the discoveries for continuing to destroy the image of women , and ⊙ with it .

It is that behind it , women are real . Behind the image . And happiness can be too . (to the extent that they are not empty bottles and relentless liars , patriarchal machines) . It is that , breaking enthusiasm , hope , ideas , etc. can make one suicidal , clearly . It is suficient that someone to whom it happens , such attacks of de-sexualizing threats , needed help , support , or materials , money , or a little hope . Really .
The case of ⊙ is to seeing this repeated itself for 36 years , and intensified to the same proportion as ⊙ had needs .
“ There is no forgiveness ” etc. they shout . And they are really not capable of it . Horrible repetition , nightmare .
The luck of ⊙ is to have known , before the woman hit the man already down on the ground , the woman of this morning , the one from the supermarket , the manager , that she is a monster . In advance . ⊙ had written it.
And ⊙ keeps his being . ⊙ has some reasons not to feel guilty , that is what ⊙ said to itself . ⊙ would not have been able to without that , without writing it in advance . Therefore , luck and effort of ⊙ .

BD culpabilisation (´´Putting the burden of guilt´´ / ´´To make feel guilt´´ / ´´Guilt-ridden´´ comic strip) - has been the muse to whom Corgone was dedicated , on the front page . Also known as MOC (Murder Of Christ) , (she is perhaps the older sister of Clio , the muse of the story)
The despite and the law .
she is the law
“ The law is harsh. ”

djeleas

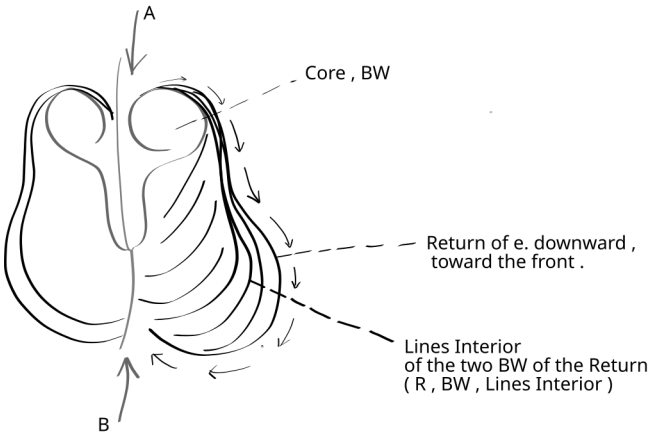
A Core Voc ; in addition ;

« Choroid » (quite simply) , or « pteroide » (for “that which has wings”)

A Core Return



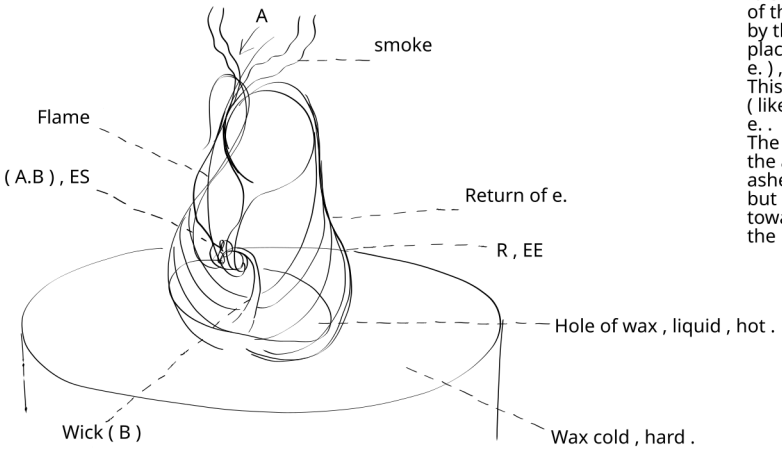
A return of e. is made toward the Base/bottom/downward and toward the front/ forwards along each Wing .
The e. , pushed by the BW towards the Top of the Core , re-descends via two kinds of wings even further to the External Edge than the EE of the Core.
Weaker than the EE of the Core (which are hard and often very charged) , slightly shifted towards the rear of the Core , the EE of the Return (R, EE) seems soft , fluttering , and random . The BW (R,BW) are more open and return to the center of the axis of (A.B) , on the B side further than the Base of the Core, the lines downwards (towards B) (nearly towards the exterior of the Core) .

EN.; Return , reverse
FR.; Retour , revenir , reversion , ...
Lat.; reversio , revenio , reventus , reversus , reversare , revertere , reverticulum , ...

(all begin with ´´R´´)

(O seen it on satellite image of AE,EA,C0 . (Clouds around) (~2023))

Flogos Heat ´´ hole of the Return ´´



It is the Return of e. , which forms the hole filled with melted wax at the bottom of the wick . The e. descending (towards the B) because it is pushed upwards by the BW of the Core Flogos , and forced to re-descend because there is no place for it higher up (of lower density than the higher density surrounding e.) , therefore toward Flow B . On a candle , it is the wax under the wick .
This contact excites , sets in motion the liquid , hot , moving matter of the wax (like a swimming pool) , which has the shape of the open BW of the Return of e. .
The movement of these open BW of the Return can be seen with , for example , the ashes of the wick which float on the surface of this hole of wax . These ashes are pushed towards the wick (the arrival Flow B) quite gently , weakly , but pushed nonetheless . Once they reach the B , they are strongly pushed back toward the extérior of this hole, quickly , then they are gently pushed again by the Return of e. towards the B .

Smoke ;

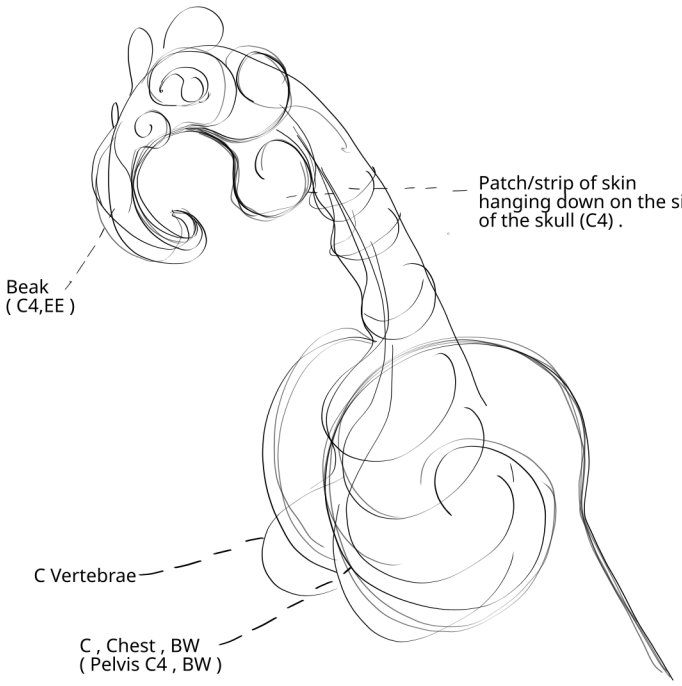
Smoke forms in Core Flogos , as an Exit of Superposition of the Bigs Whirls . (C Flogos , BW , ES) , .
This is what flows in from the EE of each Wing ; it is the excess of e. , which cannot Exit the Core zone , exit from under the BW , which has no other choice than to ´´force´´ a passage in the opposite direction of the BW , along the Top of the Flame , but remaining outside the EE of the A . The core pulsing at a rythme/mesure as the smaller Cores of the A flow in and make in movement the Wings in extension/contraction , the BW let the smoke pass only when the Wings are spread and high , at the moment/time of the Charge and Tension . At the moment/time of the Discharge , the Wings come near together and lower themselves quickly and strongly (like all the Discharges) , closing at this moment the exit/outlet of the smoke .
These two movements make that the smoke is in ´´crenellations´´ (FR.; ´´crénaux´´) , undulating with wide parts alternating with tight parts .
The smoke thus undulating more or less quickly , forms a band the width of the space between the BW , and of very fine depth , in the axis of the BW and of the Wings and not a single millimeter offset from this axis .
This undulating band is therefore thin , flat (at the level of the Top of the Flame , at the exit of the smoke) and aligned/axed . It can , then , only move laterally away from the center of the Flame (and of the center of the Core Flogos) because between the two sides of this thin band , there is Flow A and its smaller Cores , which divides it .
The smoke is a thin , flat , aligned , undulating band, whose two sides move away from each other as it rises .
(It is the ´´Hilus of the kidneys´´ , from where the urine exits , which showed this to O)

Color;

Flame Base ; Blue . It is maybe the EE of all the Core , not the EE of the Flame . (very close to the bottom of the Flame and to the Nucleus) (there is a small gap between this blue line, and the yellow one ; ~0.8mm) . The Flame is therefore maybe just what is yellow/orange , etc. , whose color melt downward . If so , what is blue at this level (the Base/bottom) , is the External Edge of the Core itself (as well as its BW when the Core Flogos is not big/large enough and deployed to form a Flame inside it) , and this blue color melt upward . (O needs to better look at the direction/angle of this blue line compared with the yellow one .)
Flame Top ; The top of the Flame is yellow , green , or blue , because, between the BW , there is the arrival Flow of A and its small Cores of e. . The e. is blue , the Flame is yellow . (Flame = Mixing zone between A and B, which superimposent themselves) When the top of the flame is yellow at a certain point , at a certain height , then , mixed with the blue of the arrival of A , it becomes , right here , green .
Nucleus ; At the very bottom of the Flame, at its Base, it is transparent , it is the Nucleus . Without point , (nut shaped , egg shaped , etc.) . (This transparent color , what is it ? hot ? density ? very exited or very calm ? Why matters forms itself elsewhere and not in this Nucleus of the Flogos Core ?)

LG

Patch/strip Skull e.g., Galine , Rooster (of the hen) ♂



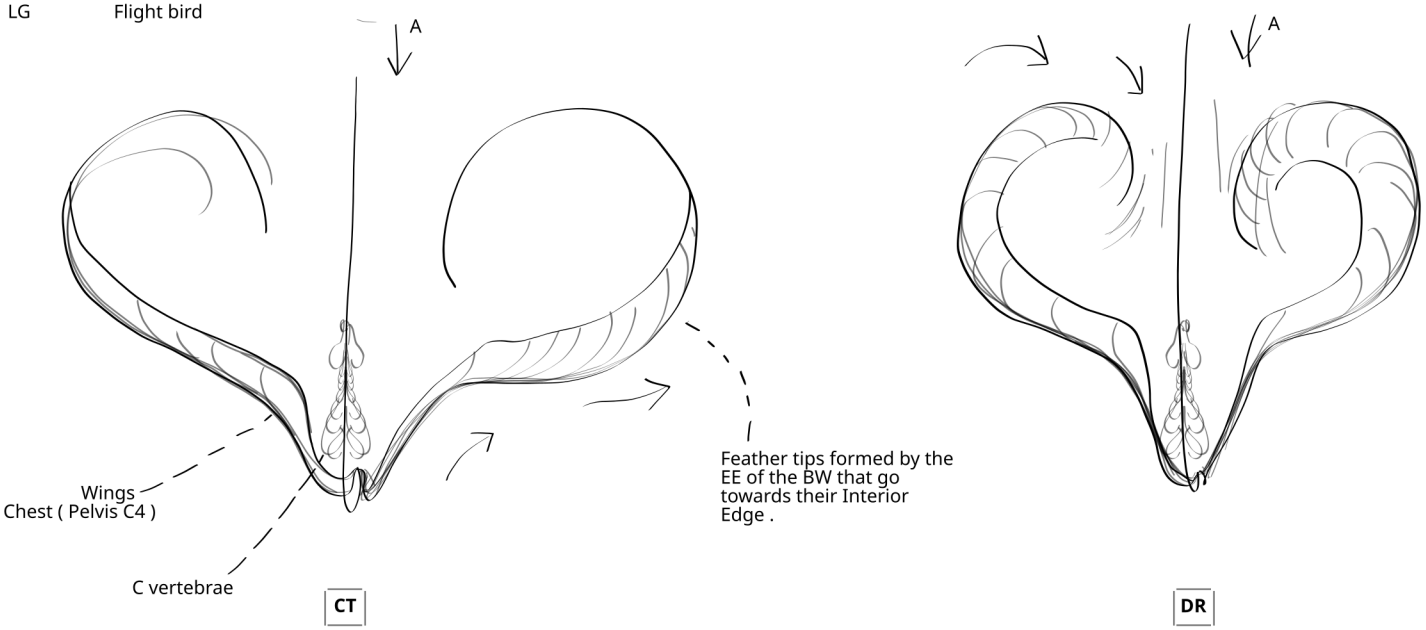
On the side of the skull (along the EE of C4) , a big/large patch/strip of skin hangs down . It has the shape of C4 and of all the vertebrae of the neck and ribs . This is the charged part just before a ´´ Cock-a-doodle-doo ! ´´ . I.e. ; before a roar . I.e. ; before the Arrival of Superposition (AS , Atrium/ostium/entrance) of Chest (Pelvis C4) makes itself at the preacordia , passing first along the throat .

A ; the same that Skull and others vertebrae .
B ; Exterior
EE ; along the beak , then the cranial arch .
BW ; the red patch/strip of skin on each side .
Base ; beak and tongue .
Flame ; Unknown .

It is the BW of C chest (Pelvis C4) that make the wings of the birds.
(While in wingless species , these BW make the pectorals .)
From here , the wingbeat can be understood !

LG

Flight bird



The EE push towards the front of the body (Core Chest (Pelvis C4)) . But the A , continuing to inflow/influx , they come into direct and frontal contact with the EE of the A . The EE of the Core Chest (Pelvis C4) have no others choice than to continue to push and to deviate towards the outside of the A (and its EE) ; This is when begin the Big Whirls of the Core Chest (pelvis C4) ; A movement going first towards the outside then returning to the center of the incoming Flow A.
To make move the body of the bird (Its Core chest (Pelvis C4)) , the movement of these BW is done in step with the smaller Cores of the incoming A , and thus , like a chain , absorbs them (~ingests) in its praecordia . A bird's wing is in this BW .
The more there is e. in the body (Core Chest (Pelvis C4)) , the more the animal is lightweighted . (Because a charged body frees itself from the charge of e. of the earth , to a certain extent , and therefore from its gravity .)
(This explains the sternum (praecordia/disseptum/plexus) of the bird , much more developed and thicker than other animals , which receives a much stronger and much more constant influx . Receives and researches it , aggressively , to move .)
(The tip of the wing is the Exit of Sup. of the BW .)
It is a motor movement , natural , with the arrival of e. in front/face (of the Orgonome , but above of the Core (Core Chest (Pelvis C4))) .
The feathers are in the direction of the BW .
In contradistinction to the ´´mammals´´ (FR.; ´´mamifères´´) , these BW do not form pectorals (and do not need forelegs (to move)) . In birds, these BW are detached , outside the skin of the Vertebrae (Vertebrae which are in continuation behind the Skull) , and have their own skin (and hair/feathers) .
In ´´mammals´´ these BW are under the same skin and interlinked with the vertebrae ; they form the pectorals (and move less , it seems to ♀) .

The Wing and the BW of the body (Core Chest (Pelvis C4)) can be more or less separated , that is to say , if the BW is larger than the Wing , it does not matter , it shrinks in size at the moment/time of the Discharge and Relaxation .

Charge ; The Wings deploy/unfold themselves along the BW , which expand and move away from the center of the body . Influx of A has begun .

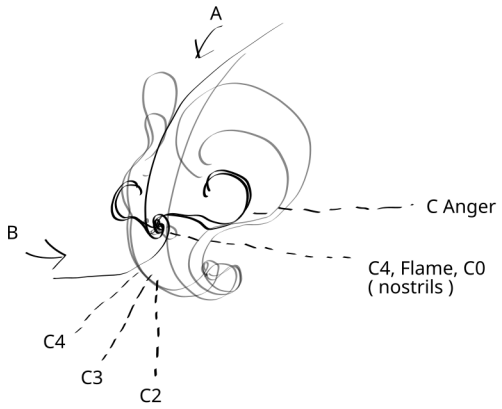
Tension ; The Wings are fully deployed at their maximum , and push against the EE of the BW . The BW are big/large .

Discharge ; The Base of the body (Core Chest (Pelvis C4)) has been tensed/bended/tighted/stretched to the hole of the Core , to the Flame (i.e. ; to its belly , coming from above , through the kidneys , pelvis , lumbus , Base/bottom of the back) , i.e., for a bird , that the ES has passed through its feathered tail , which it rose upwards just before the Discharge .

Relaxation ; The BW are less charged of e. , they shrink , continuing their Superimposition with the EE of the A , until they touch the A in praecordia (solar plexus/disseptum) , the tips of the Wings of the bird are therefore at this level under the chest of the body , just at the top the Flame (their belly , i.e. ; all the part of the vertebrae (ribs , sternum , etc. , but without pectorals) . The feathered tail re-descends . The Flow of A has ceased .

The more the bird flies , the less there is difference between the ♂ and the ♀ , because the ♀ uses a lot of the same Flow than the male , which passes in front of its body, rather than behind/rear , as for all females . (This explains why at " the time of the reproduction " , the female eagle falls from the sky and the male follows her down (but him , he remains in a horizontal position.)
The less the bird flies , the more differences there are for the same reason ; e.g.; Hen/rooster, peacock etc. (~ the male is forced to conpensate the miss af the A from the sky , by a terrestrian A Flow , which is more .. ´´random´´ .. (and its sexual Flow are in the same direction (pass by his praecordia too)) . While the female does not need/research it samely (the amount of e. that she needs/research at her praecordia is less strong (because this need is divided and her Sexual Flow pass at the rear/behind her , to her pelvis C3 .)

LG , OA Skull Core Anger (C4 , Flame , C-1)

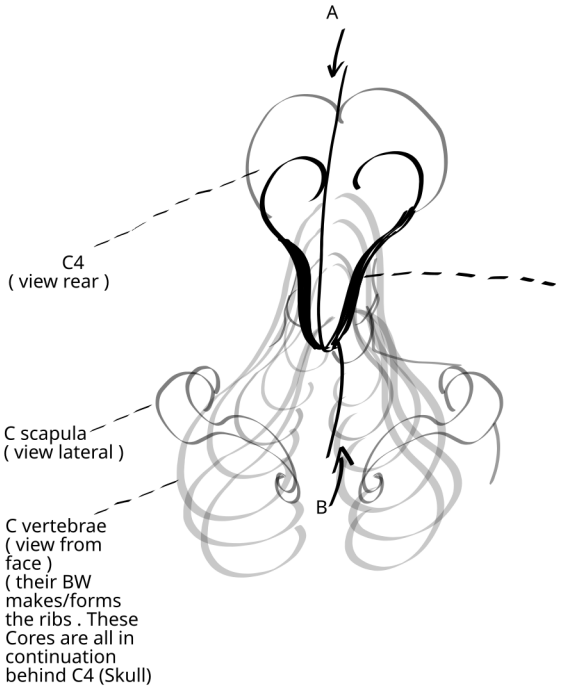


1 st Core of arrival . Head often lowered , to catch the B .
Its BW are in the same place that C2 (smile) .
Its EE descends obliquely along the nose , visibles , above the Flame of C4 .
Its base is just above the nostrils .
It is like the nostrils but bigger/larger , it has the same direction , it seems higher .

A ; Interior
B ; Exterior , comes under the nostrils
EE ; crease/fold of the nose to the cheeks
BW ; cheekbones under the eyes (and bigger , under)

e.g. ; a growling dog . the ´´lips´´ (FR.;´´babine´´) , at the rear of the mouth , etc.

LG , OA Core Nape



A
C4
(view rear)
C Nape ,
(view from face)
EE very visible .
BW not very visible in H-S .
C scapula
(view lateral)
B
C vertebrae
(view from face)
(their BW makes/forms the ribs . These Cores are all in continuation behind C4 (Skull)

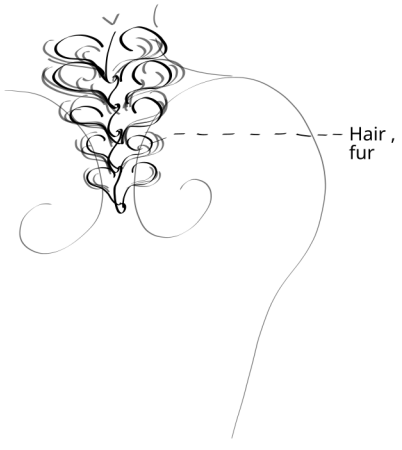
Core Nape supports the head (skull , C4 , etc.) , behind the neck .
For ♂ and ♀ ; it's the same .
It is seen from the front when the Orgonom is seen from the rear/behind (For ´´Homo-Sapiens´´(H-S) , or from above in most other Orgonoms) .
For several species, its BW makes/form/create the horns. (for the bulls , rams (FR.;bélier) , goats , etc.)
For ´´Homo-Sapiens´´ , the BW are smaller than the BW of C4, so they stay/remain under the skull and do not form/create horns.

A ; Exterior . reverse of C0,C1,C2,C3,C4 and vertebrae
B ; Interior . the same that the A of Vertebrae and C0,C1,C2,C3,C4 before it reach them .
EE ; The two column of the Nape , they begin at the Top of the back (at the top and rear of the Chest) , then separate themselves a little (moving apart form each other) , then separate themselves even more , at their Top , at the begining of the BW .
BW ; In the skull ; unknown . At the exterior of Skull ; the BW makes the horns . Exactly in the direction of the BW of a Core ; going away and moving away the more of the Flow A , then coming back until they touch it. (in the interior of the curb of A .)
Flame ; Between the two EE , until the Base .
AS ; Arrival of Sup. (Atrium) unknown.
ES ; Unknown .
Base ; unknown . (behind the neck , maybe the top of the spine (vertebral column) (Without the cervicals) . It makes maybe a point on the head´s nearest vertebra .

Orgonom view rear.

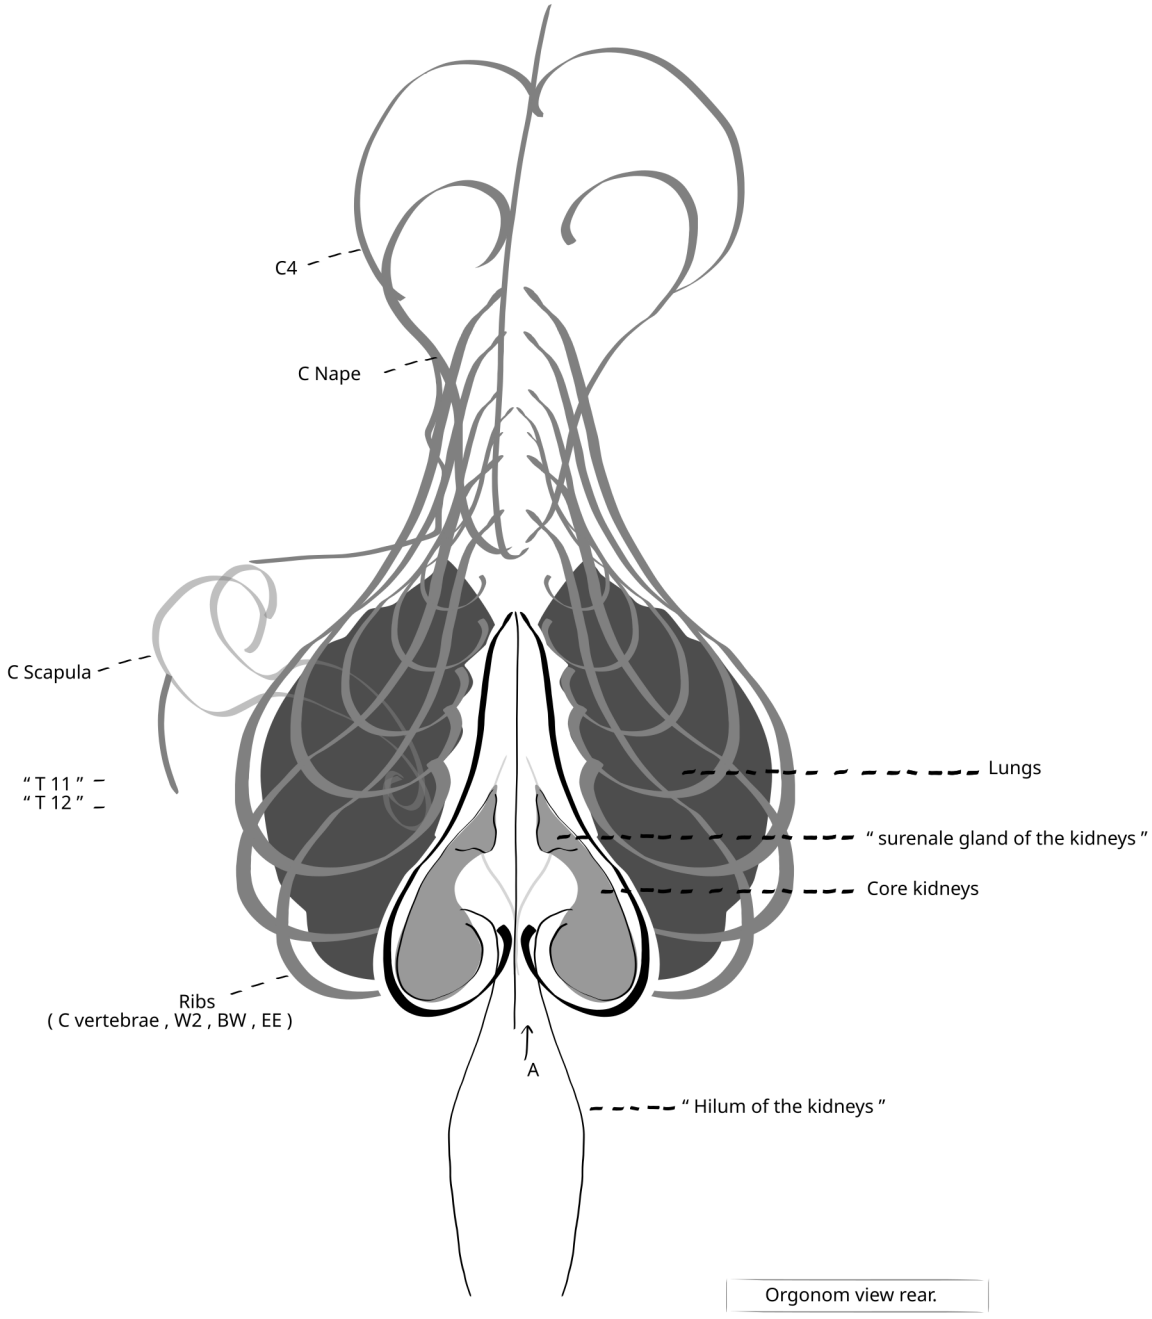
(SRC ; Seen on two french tibetan monks/priest , one ♂ and one ♀ that have overtook ⊙ because he avoided a car taking all the street .)

LG , OA Hypothesis chest (Pelvis C4) , AS hair/fur e.g.; Lion



Hair on the chest , between the two pectorals .
In shape of Core .
This is the Arrival of sup. (the Atrium , the entrance , ostium) to the upper part of the chest , just before the praecordia (solar plessus / disseptum) .

(SRC ; Seen on a bronze statue of a ´´griffin ´´ , 2m-tall , wings deployed/spread , seated .)



Orgonom view rear.

LG , OA Lungs (Cores Vertebrae , Big Whirls , Edge Interior)

The lungs fill the Edges Interior of the Big Whirls of the Cores vertebrae (those which are behind C4 (Skull) .
The ribs are the Edges Exterior of these Big Whirls of these Cores . (One rib per BW of a Core vertebra) .

Each time that the series of Cores vertebrae are supplied/feeded with e. , successively and in the same time and movement (the time and movement of the Charge and Tension (from the life formula ; Charge , Tension , Discharge , Relaxation) , the time and movement of Extendere (from the breathing in Intratendere and Extendere) , these Big Whirls pulsate . They expand/enlarge , the Wings spread apart by pushing on their EE , then they come together again . The lungs do the same . The ribs too , but solidified over time , they are a little more fixed in a more or less average position between the maximum distance and the maximum proximity between the Wings (and therefore at the same time , between a very large (extended/expended) Whirl , or a small (contracted/ closed) Whirl) .

The lungs form a set of the Edges Interior of the Big Whirls of the Cores Vertebrae (each material formed by each of these Whirls , mixes itself with the material formed by the previous and the following Edges Interior of the Big Whirls .

Origin ; Cores Vertebrae , Big Whirls , Edges Interior (AO , Crane , C Vertebrae , BW , EI)
Material ; soft/flexible , light in mass (very light when charged with e.)
Color ; more or less clear depending on the e. of the surrounding Flow B , etc.
Function ; draw/attracts and retains the e. .

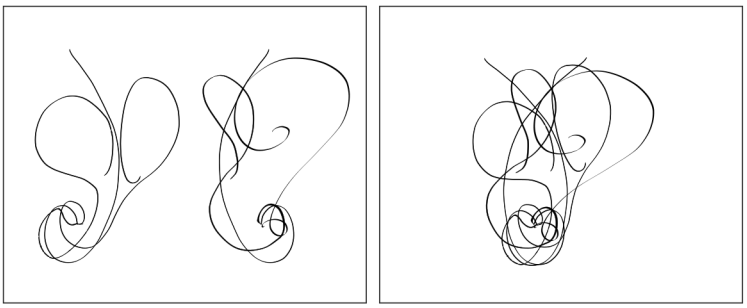
LG , OA Core Kidneys

The kidneys form a Core. It is oriented upwards, in the same direction than Crane C0,C1,C2,C3,C4,C Vertebrae .
The Edges Exterior , where all the e. of the Wings passes , form the “surenales glands of the kidneys ” . It is indeed , an influx for each Wing .
The “ Hilum of the kidneys ” is formed in Core Kidneys , Exit of Sup. of the Big Whirls .
The excess of the EE of this Core , therefore reaches this point , and forms the urine.
The “ hilum of the kidneys ” is the urethra , through which the urine passes before going into the bladder, then vagina or penis.

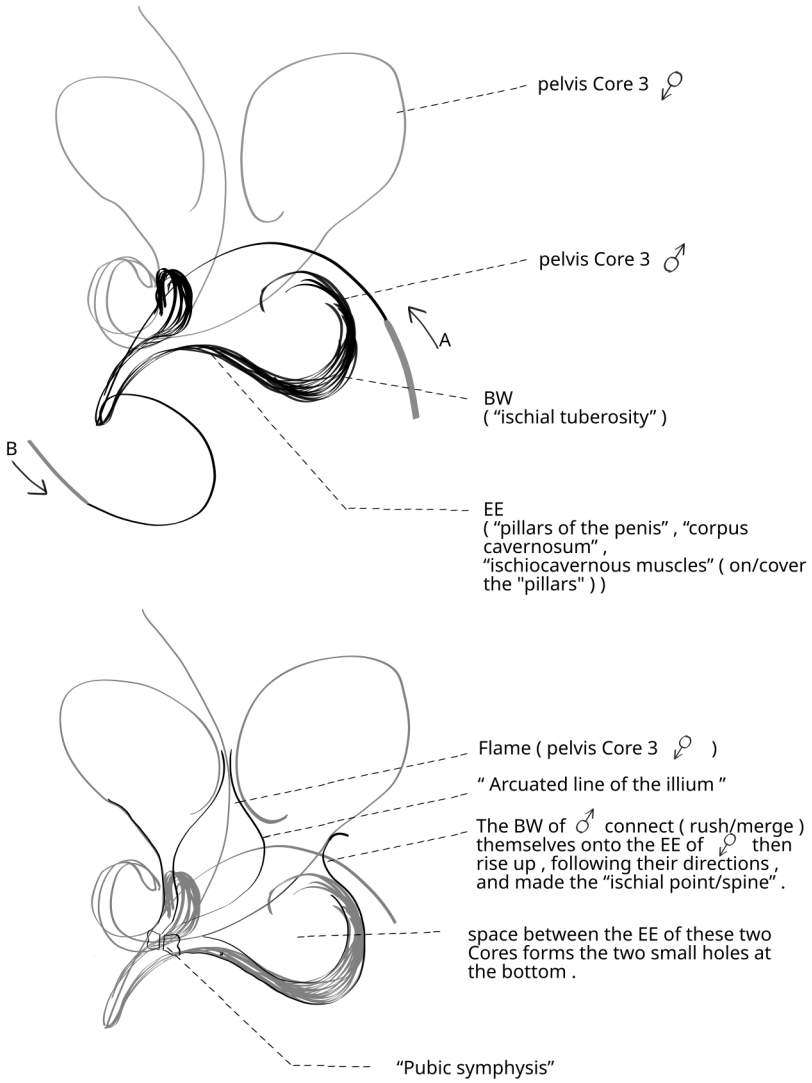
LG , OA Pelvis Core double the 2 EE in + (male/female) e.g. Homo-Sapiens

There is the other sex in the pelvis ! It remains a trace of its Core , of the ancestors/gills ! Absolutely incredible but it is true . Pelvis would be double , the EE are at the very bottom , at the base, (the two ´´strange´´ round holes are between). One sex uses one pair , the other sex uses the other pair . And the Orgonom carries what is not used ... from the previous generations, for the following ones.

If it is true it says a lot about the ´´gender´´ !



LG , OA Pelvis Core double male e.g. Homo-Sapiens



Flame (pelvis Core 3 ♀)
“ Arcuated line of the illium ”
The BW of ♂ connect (rush/merge) themselves onto the EE of ♀ then rise up , following their directions , and made the “ischial point/spine” .
space between the EE of these two Cores forms the two small holes at the bottom .
“Pubic symphysis”

Voc ;

- “ Upper opening of the pelvis ” ; (between female W1 & W2 seen from above) (we can see in a male Orgonom that the Edges Interior of the BW separate/spread/move apart , not in a female Orgonom) , for female ; “ much larger in women than in men ” , for males ; “ form of a heart in men and narrower than in women ” .

- “ Pubic symphysis ” ; (a space in “cartilage” between W1,EE & W2,EE in males & females), " the pubic symphysis is a articulation between the two pubic bones " .

- “ Obturated foramen ” ; (« strange » hole between male pelvis C3,W1-2,EE & female pelvis C3,W1-2,EE . At the very bottom of the pelvis)

- “ Superior pubic branch ” ; (female pelvis C3,EE)

- “ Iliac crest ” ; (female pelvis C3,BW,EE,Top) , “ attachment point of the abdominal wall muscles. ; more robust or larger in men than in women ” .

- “ Sacroiliac articulation ” ; (between the two BW of the Core female and the “sacrum”) , “ the articulations of men , including this one , are bigger than those of women ” .

- “ Gluteal surface of the ilium ” ; (female pelvis C3,W1-2,BW view front) , “ This is where the buttock´s muscles attach to the pelvis ” .

- “ Postero-superior iliac spine ” ; (female pelvis C4,W1-2,BW,EI) , “ posterior end of the iliac crest ” .

- “ Ischiopubic branch ” ; (male pelvis C3,EE) , “ thinner in women than in men ” . “ thicker in men than in women , and equipped with a protuberance to which the pillar of the penis attaches itself ” .

- “ Ischial tuberosity ” ; (male pelvis C3,W1-2,BW,EE) .

- “ Subpubic angle ” ; (angle between male pelvis C3,W1,EE and male pelvis C3,W2,EE) .

- “ Great ischial incision ” ; (space between male pelvis C3,W1 and male pelvis C3,W2) .

- “ Ischial point/spine ” ; ((male pelvis C3,BW) × (female pelvis C3,EE)) . (Like Italy with (EA,C3,W2,BW) × (EA,C2,W2,EE) , ~ and Mexico with (EA,C3,W1,BW) × (EA,C2,W1,EE)) , “ this protrusion of the ischium is the point of attachment of the sacrospinous ligament of the pelvis ” .

Etymology ; Ischium

LAT.; ischia ; hip (late. scia)
GR. ;
ισχιον ; (1) hip bone where the femur fits, (2) fleshy part around the pelvic bone, hip, (3) protruding part of the buttock bone.
ισχαριον ; hip .
ισχας ; (1) dried fig, (2) anchor .
ισχαιμος ; that stops the blood .
ισχαναω ; (1) to hold back , to stop , (2) to hold on , to attach oneself to .
ισχιορρωγικοσ ; with broken hips .
ισχιας ; disease of the hip (e.g.; articulations)
ις , ινος ; (I) muscle , nerve , in the sg. designates the nerve behind the neck , at the nape of the neck . (2) fiber of the plants (3) vein of the metals . (II) strength , vigor , vehemence .

Etymology ; Anatomy

GR. ; ~ to cut into pieces from the bottom toward the up , dissection , ... (ana - tomos)

Core Pelvis double ;

The female Core is above of the male Core . The female Core is more visible . The male Core is constituted with the “ischium” .
The thickness of the EE of both Cores is not the same following the sex . In a Orgonom male , the EE (the two “branchs”) of below is thicker . In a Orgonom female , the EE of above is thicker .

The “pubic symphysis” is a junction point of the two Cores , their Edges Exterior meet here / comes together here .
Between these junctions, there is a space of “cartilage” , it is where passes the Arrival of Flow A of the two Cores (and therefore of the two sexes/genders) .
The base of these two Cores continues without forming bone ; it is the beginning of the genitals parts . Flexible and moving , made of flesh (muscle , fat , cartilage ..), of fluids (blood , semen ..) and concentration of e. pulsating towards the Exit Sup. of Pelvis C3 .
The female Core forms a Flame . The edge of this Flame is the “ arcuated line of the illium ” .
The Big Whirs of the male Pelvis C3 do not return toward the inside of the Core until they touch the Flow of arrival A , unlike the BW of the female Core . These BW therefore cannot form a Flame like the one visible in the Female Core .
The “Ischial point/spine” is the resultant of a meeting point of (male C3,W1-2,BW & female C3,W1-2,EE) , (male C3,W1-2,BW rushes on female C3,W1-2,EE) , The BW can not terminate themselves (And then can not form a Flame in the Core , and then neather a Nucleus , and then male pelvis C3 can not carries a new birth .) . It is a point of resistance and problematic in male (The Flow of the BW use frequently another path , toward the Top of the Orgonom ,

The genitals parts of the male Pelvis C3 are made in their Edges Exterior of “ pillars of the penis ” (of “ corpus cavernosum ” and with “ ischiocavernosus muscle ” (which cover the pillars).
These “pillars” are the EE ; they goes “right” along the ”ischium“ and plunge into the “ischial tuberosities” . The “ischial tuberosities” are the BW .
The “ bulbospongiosum muscle ” is the A (the Flow of Arrival of e. . I.e. ; the interior of the penis to the “ glans ”) .
The A passes under the pubic symphysis .

It wasn't easy to find , because there are almost no lateral representations of the pelvis in the manuals of anatomy.

LG , OA ♂ Pelvis C2 Return testicles e.g. ; HS

The testicles (the BW of the Core penis (Pelvis C2)) are behind the skin , behind the “ pubic symphysis ” . What are hanging below the penis , with the “glands” , is a Return of e. .

LG , OA Cores Vertebrae Pelvis/Skull

There is a change of direction of the “transversal” “epischopal” “point/tips” of the vertebrae . They are opposite each other between those of the “lumbar vertebrae” and those of the “cervical vertebrae” .
Just like The opposite direction of the A between the one of the Pelvis and the one of the Skull/head (until the Cores ribs and kidneys) .

LG , OA Sacrum

Sacrum Nerves ... Vertebral Canal . ~ beginning with some ´´holes´´ inside through which they pass to the pelvis (and until femur ⊙ believe) .

LG , OA Cores Vertebrae " vertebral canal "

Everything is ´´connected´´ to the "vertebral canal" .
“Tendons” “ yellow ligaments” , form its wall ; the vertebrae , the round and thick part , are not thick , are not round ; it is a Core , Base toward the Orgonom´s front . This part is not empty , it is bony . The medulla (FR.; moelle) , is the “vertebral canal” and passes behind this bone , behind this Core , not inside , but passes through the "hole" of the vertebra (hole between this part , the "transversal" things on each side (the two small points directed towards Orgonom´s front .) .

LG , OA C temporal

A C under the brain , C temporal (the BW seems to be the BW of the Core Nape ..) " inferior something ” “ temporal ” in the opposite direction of Skull C0 , C1 , C2 , C3 , C4 and of the several following . Base towards the Orgonom´s rear (~ like Core Nape) , BW behind the eyes .

LG , OA Skull Return

C0 , C1 , C2 , C3 , C4 have a Return of e. . For example , It is formings the ´´hanging cheeks of old age ´´ .

LG δενδρον Leaves

Some leaves can be approaching to the shape of a Core .
But many are just of the shape of a Flame of a Core .
(e.g. , magnolia leaves . ~ Perfect Flames , in spikes of fewer than ten) . This means in this case here that the Wings of the Core are around , and bigger/larger .

LG δενδρον flowers magnolia

edit : error , the Cores are not in the direction of the length .
The stem , which will form a sort of pine cone from the flower stem , begins to grow in spring . It is at the end of a branch , toward the top , yellow , almost fluorescent,
at the middle above the spike of Cores surrounding the Flames of the leaves .
the Base of the Cores come attaches themselves to it , then the BW will develop towards the exterior , face toward the bottom (they , alone , are visible) .

Ref. in a book about trees ;
Magnolia ; Laumiere , the king's younger brother , give his discovery to Pierre Magnol (1638 - 1715) , physician and director of the oldest botanical garden of france in Montpellier. (“simple leaves” , flowers in three columns/strate ; petals, sepals, petals. The cone begins passing by the top of the flower , a spiral structure in the cone-shaped fruits. “Quite a spectacle” , seed red ~2cm , birds disperse the seeds .
Magnolia grandiflora ~1711 from central europe . Arrived in Nantes by an 18-year-old captain returning from voyage. In a greenhouse, then in a garden.
Widely planted in the South-West of France .

LG δενδρον clovers

Some species of clover have their 3 petals exactly of the shape of a heart , with the seemingly ´´pointed´´ tip in the center , on the stem .

LG δενδρον Hypothesis division

branch tip , if receives enough of e. , forms a Core , from which a wing emerges . This is division .

LS Ravage Language gender neutral

LAT. ; A neuter , a masculine , a feminine
FR. ; A masculine , a feminine

= They have removed the neuter , for example , for the adjectives
= It have put an incredible mess . Everything that doesn't have a sex was forced to be masculine
= Overpowering of patriarchy
= Feminism of confusing of the words with moralism , confusion of the two sex , and perpetual recreation of the asexual . etc.

LS Ravage Language hypothesis FR. words endind “e”

FR. ; All the words ending with “e” are feminine .
Except for words that indicate a pleasure . e.g. ; sucre (EN. ; sugar) , foutre (EN. ; cum) (´´du foutre´´ , not the verb) , poète (EN. ; poet) , prêtre (EN. ; priest)
These words then end with the addition of “-esse” , “-rie” , “-ete”

= impossible connection between pleasure and the feminine .

e.g. test ;
´´L´odeur d´une foutre d´une poète de 25 ans ou d´une prêtre de 31 , le jour d´une nouvelle lune . Un vaggin comme une sucre .´´
(LAT. ; ~ ´´ Odor fututum poeta viginti quatuor anni vel vates triginta uno , diem negra luna . Vesica siccut sucosa . ´´)

LS Ravage Language Exitation

FR. ; Exitation ; ~ set in motion by intensity , often sexual . Stimulation
EN. ; Excitment ; ~ set in motion by intensity , often sexual . Stimulation
EN. ; Exit ; Exit
LAT. ; Exitio ; Exit .
Corgone ; Exit of Sup. is often sexual ; the discharge of the e. are aided by some sexual excitements .

= ´´sexual excitements ´´ corresponds to ´´ excitation Exit of Superposition ´´ .
= there is a correspondence of language with the facts !
= but the word is constantly attacked (denigrated , accused , etc.) ;

E.g. ; Saez , Damien , Nucléair , ~2005 ;

´´[...]
Moi j´veux du nucléair ,
Mon dieu que c´est exitant !
[...] ´´

“[...]
Me , I want nuclear ,
My God , it's so much exciting !
[...] ”

The word ´´ excitment ´´ was associated by the singer Saez to ´´ Nuclear ´´
Emotional Plague ; because the sexuality is conditioned by the worst that can happen and is therefore undesirable , and therefore impossible to wish and to achieve .

These words are also intentionally put in the wrong meaning (~ misinterpreted) ;
The ´´Nucleus´´ would be ´´exciting´´ .
Complete Emotional Plague ; Because reality is the exact opposite of the proposition described and imposed by this song .
It's what is ´´ Exciting ´´ that leads straight to the formation of the ´´ Nuclear ´´ , of the Nucleus , of the seed , of the child . Through sexuality , then .

O believed , for 20 years, that it was irony, some ´´provocation to shake things up´´ . No. It's false, and it's a lie , and manipulation and many murder . (It's better . when we don't know for sure, that the sexual remains in ambiguous , indeterminate , in difficult conflict , in the tragic , the epic, the comic, or even the absurd or the gentle, it doesn't matter . Exciting is a word important enough to specify that it must not to be associated to absolute evil.
Its twin is of course ´´ desire ´´ (but that one is literally consigned in hell with no chance whatsover to seeing the light of day again.)

E.g. cornuatus ;

´´[...]
Moi j´veux de l´exitant .
Mon dieu que c´est nucléarisant !
[...] ´´

"[...]
Me , I want excitment .
My God , it's so much nuclearing !
[...] "

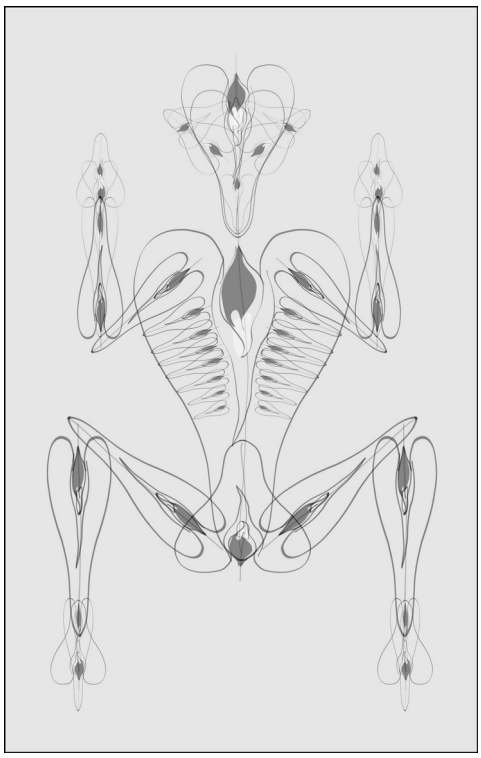
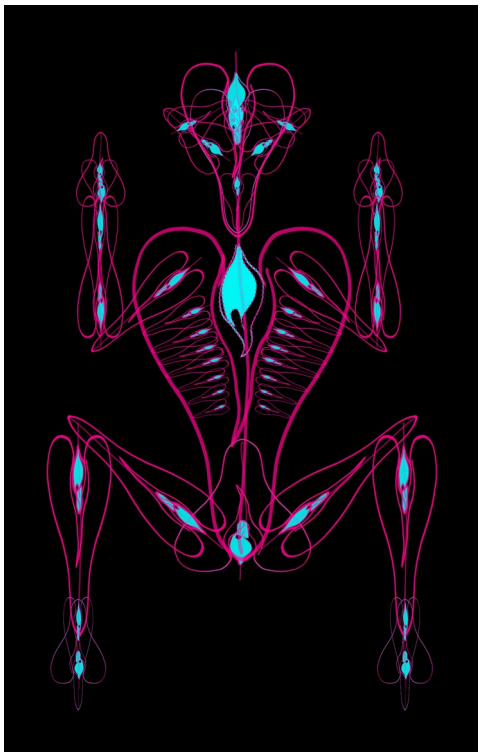
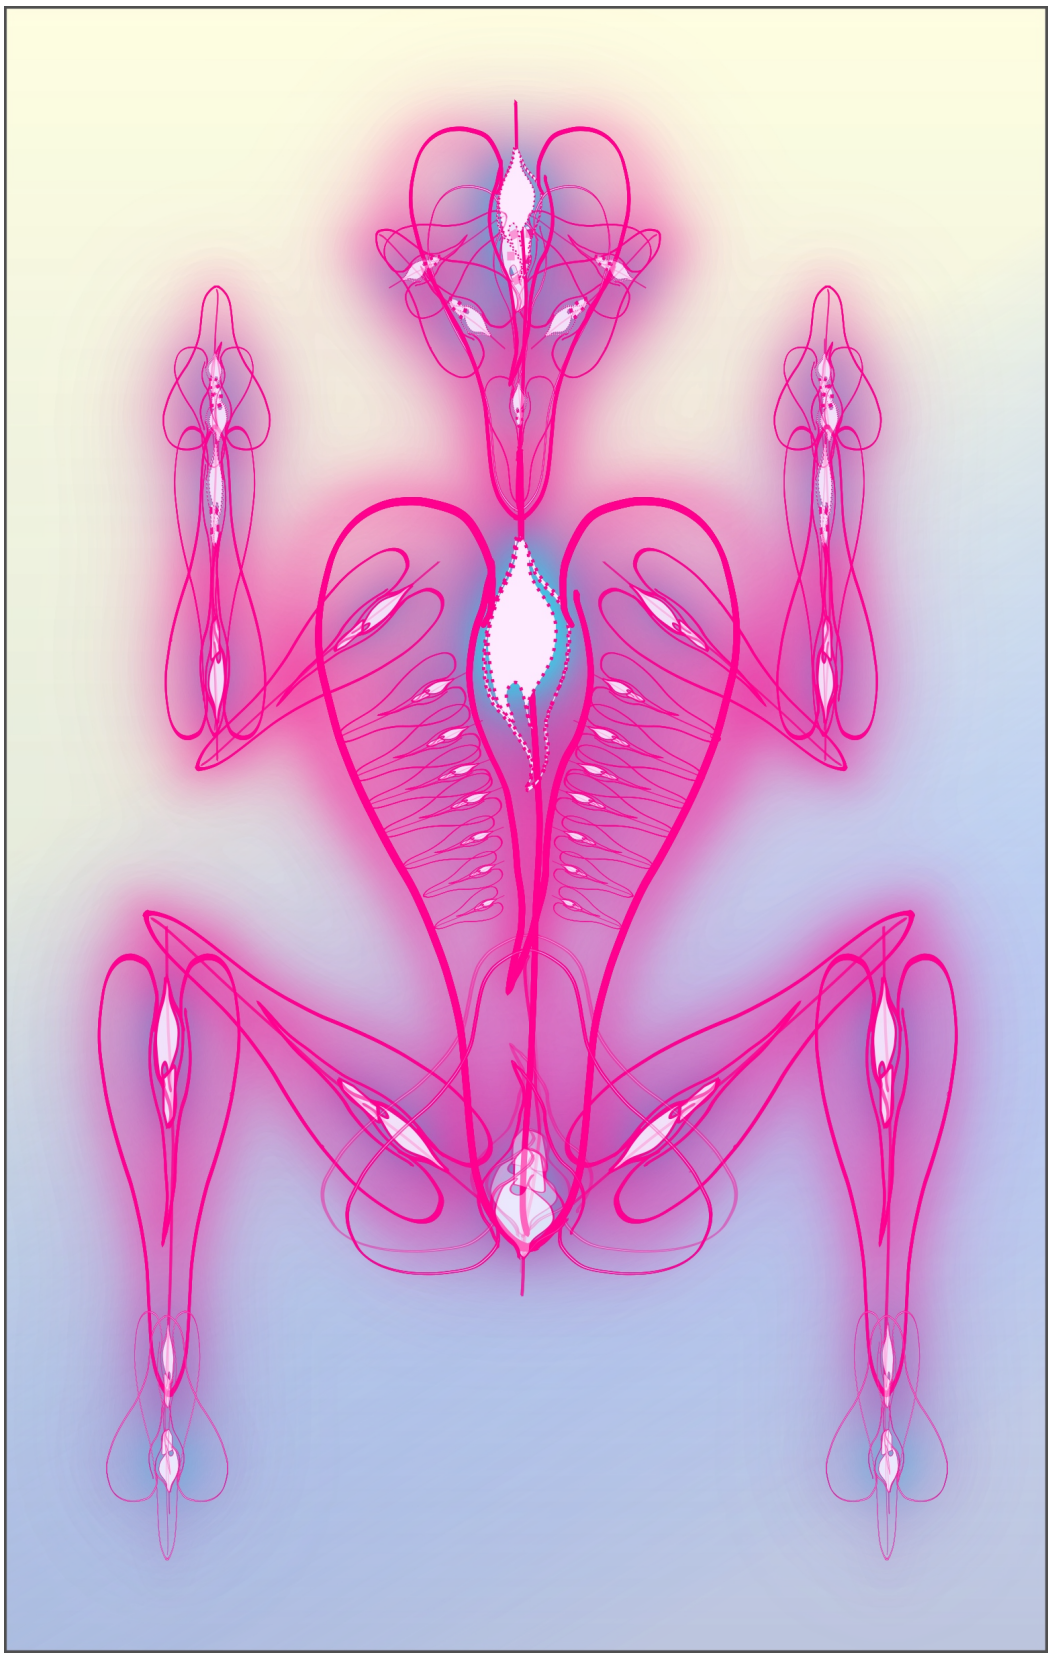
drawn c_01_face_avec_others_310724_04_08h25

First drawing with only a single Core in front view (Core version 1 , c_01.svg) used as a pattern .
Pasted into the page , then changed the size , the orientation , the color .
A general symmetry was kept .
Done in less than 5 minutes .
07/31/24 , 08h25min (GMT+2) .



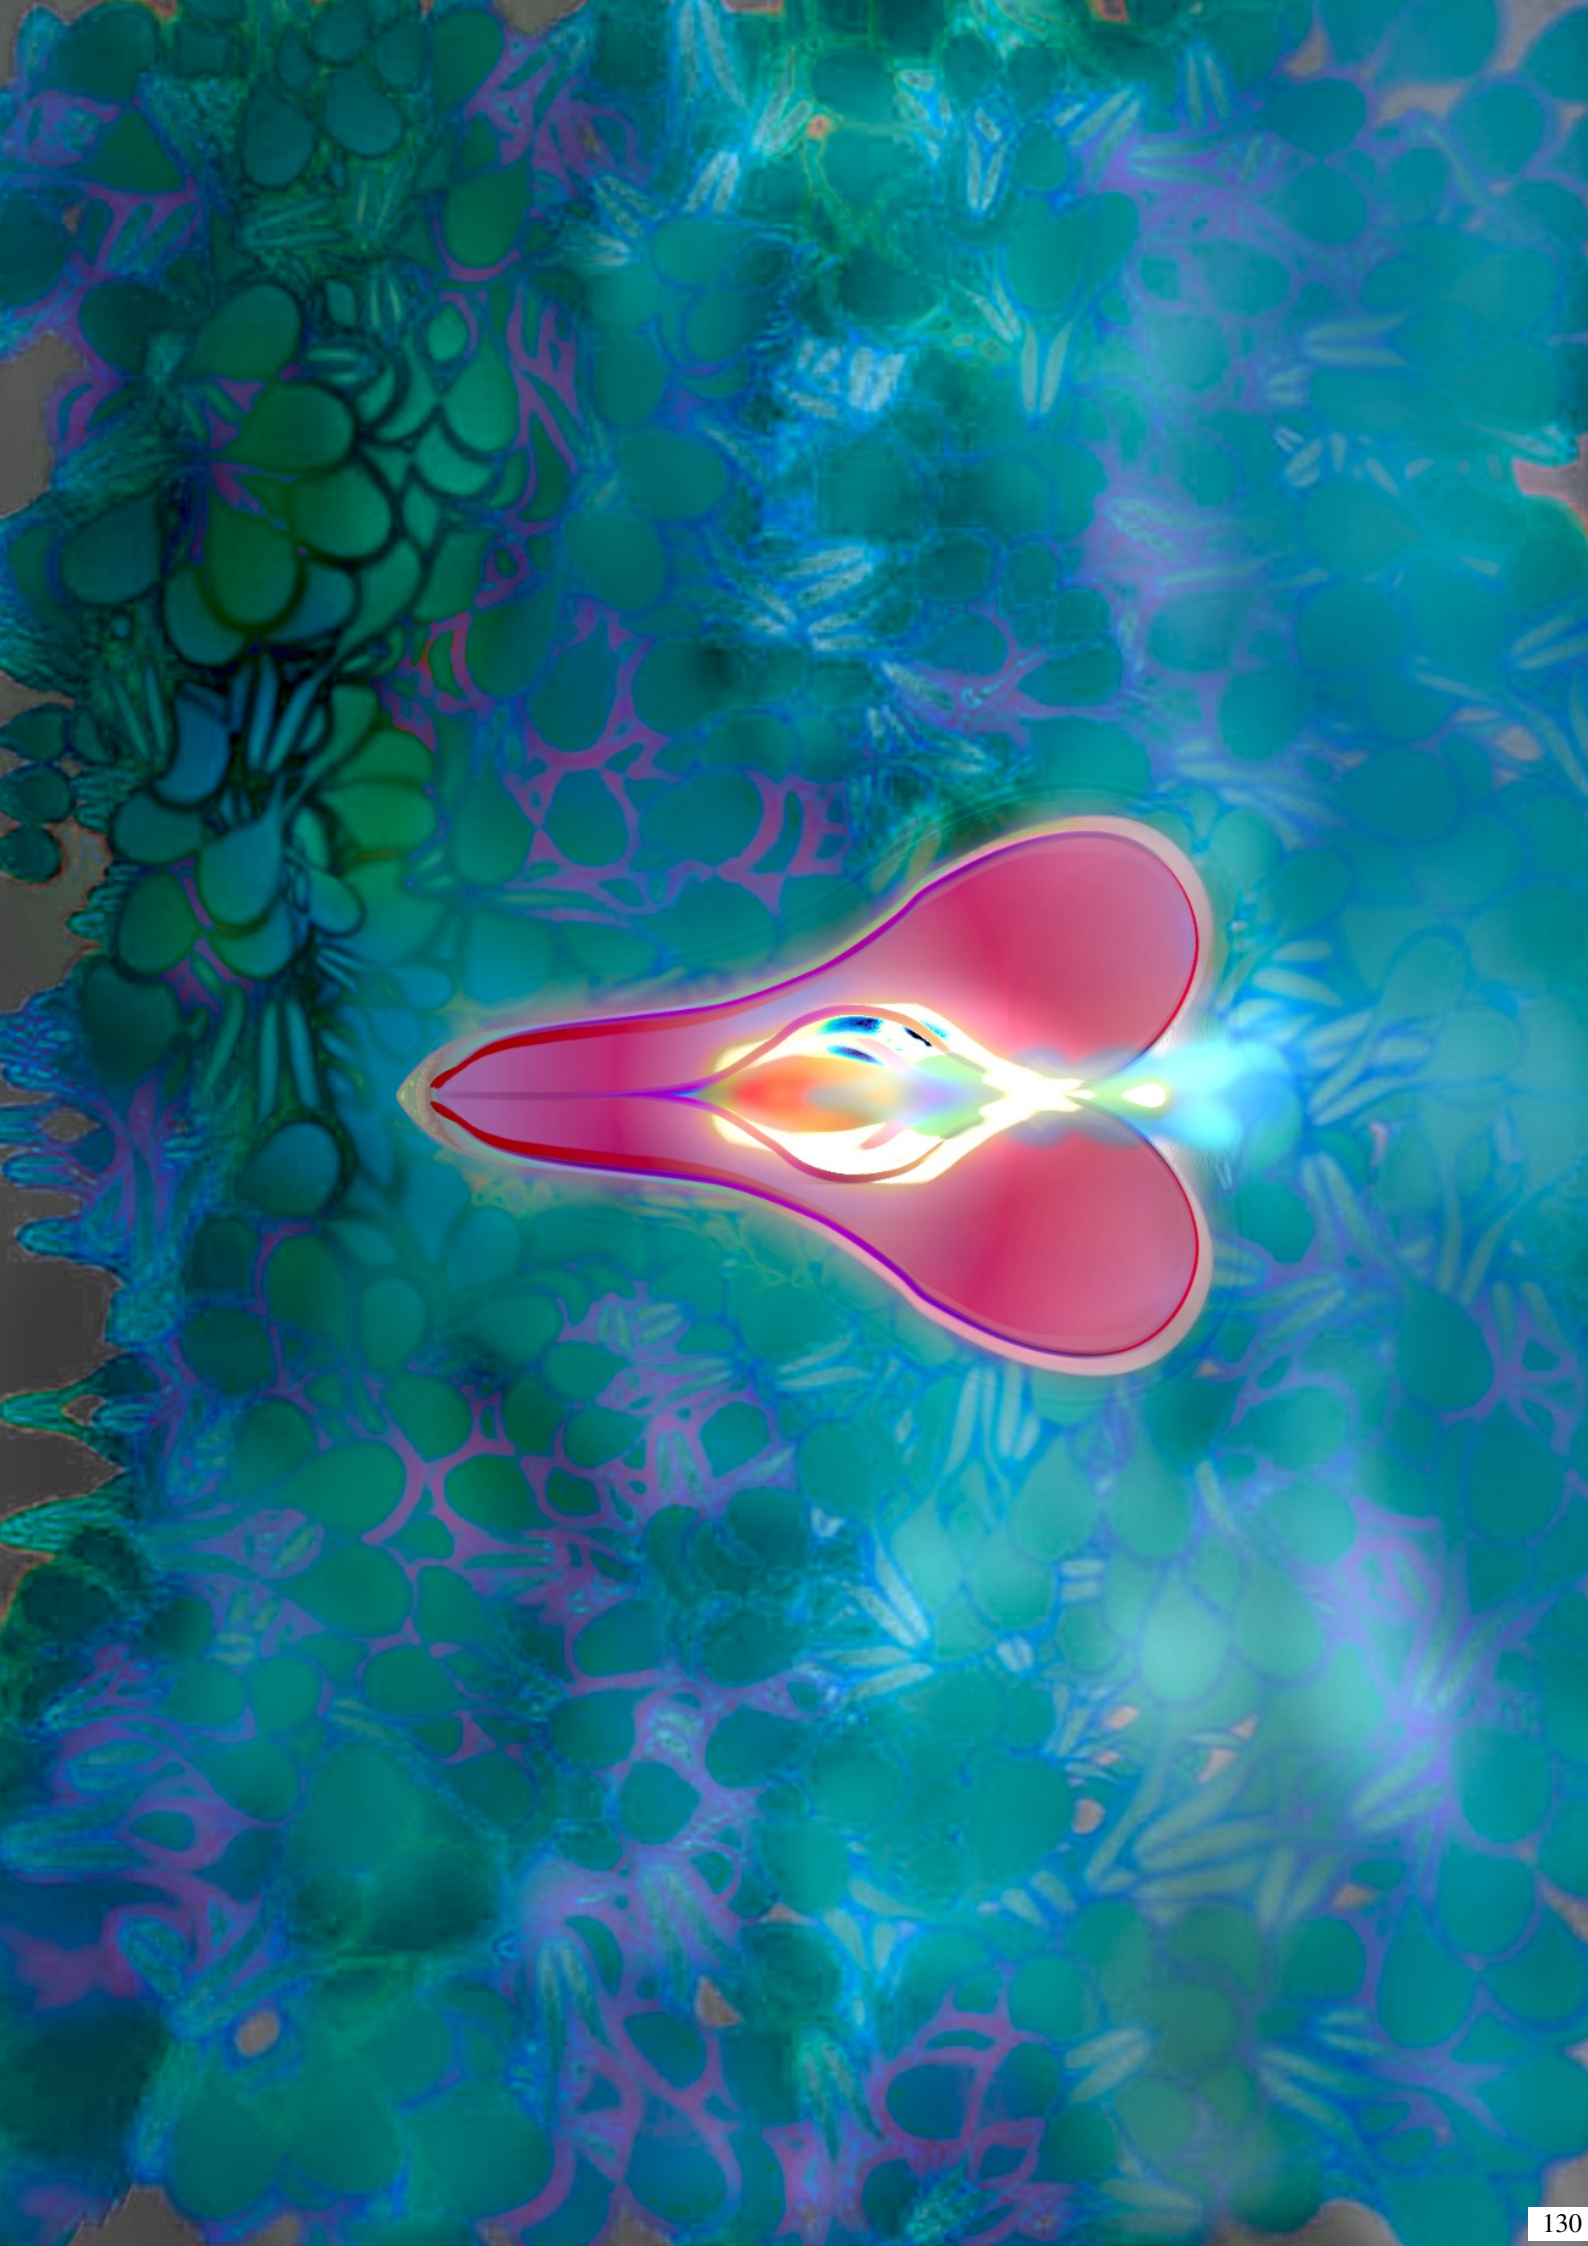




---

drawn c_02_f04_fd_01 (next page)

Second drawing with only a single Core in front view (Core version 2 , c_all00.svg) used as a pattern .
Foreground : A Core with its Flame .
Background : Cores colored , then distributed as a pattern in a “ spray ” tool , with a few variables changed for the orientation or the size .
Done in less than 30 minutes .
06/15/25 , 01h25min (GTM+2) .



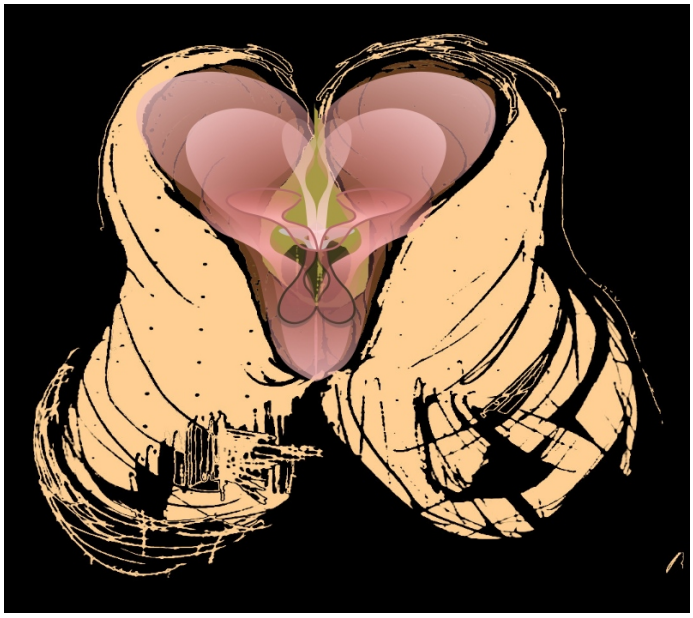
drawn c_n_add

Third drawing with only a single Core in front view (Core version 2 , c_all00.svg) used as a motif , as well as a Return placed here and there . A visage . We can see where the Nucleus is placed , just behind the nose . We can see that the Nucleus are a Return .
08/15/2025 , 17:43

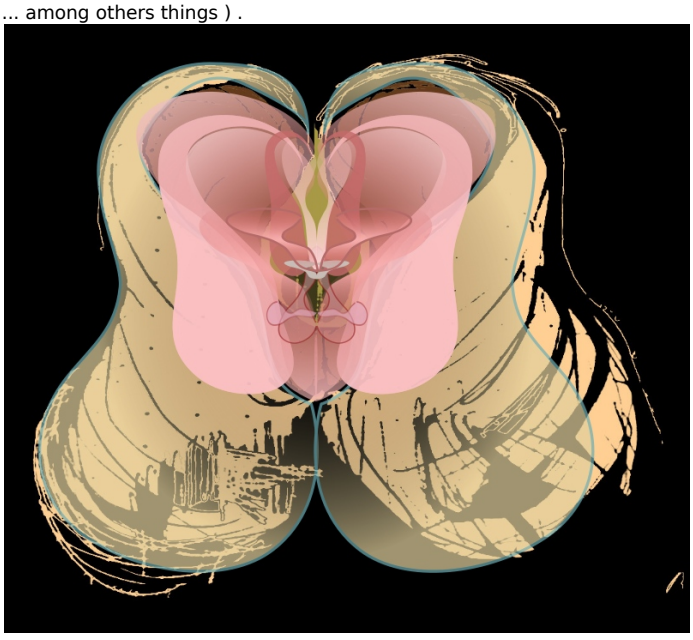
- 1 ; We can see that the Nuclear is formed in the Base of the Flame from the inside of the Wings . The e. continues the path of the Edge Internal (which descends along the Flame) and rises again , in the Flame , in the side of the opposite Wing (only moment when the sides interpenetrate) . Until it accumulates in matter , forming the seed (at the end of the running/course/dash , therefore.) . This explains why there are as many seeds as Wings (for example, in a fruit), (most of the time, 2 seeds .) (The seeds of coffee for example.) . Carefully consider the line, which never breaks itself from the base of the C, to the end/extremity in the middle of the top of the seed. All curved. (The return is added to this sketch.)

- 2 ; Very quick coloring , just to see . (the tones are beige) .

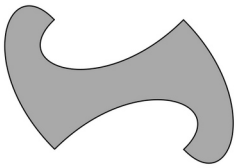
- 3 ; This immediately gives a drawing . A face/visage dj. thinks .
By gradually adding some C over the C4 Skull , we can see that the nose is placed just in front of these seeds. (On the skull of an Orgonome (e.g. ; a Homo-Sapiens) dead, or living (by an "x-ray" picture) , we can see that these seeds do indeed exist in the form of the hole of the nose. (This speaks a lot about breathing, which would be an extension of the two uninterrupted lines seen in 1 .)



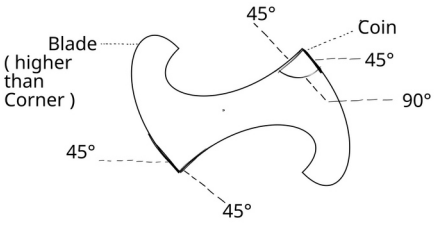
- 4 ; One or two more additions of some C in front view, simple, and some Returns, very quickly. Well, strangely, I find that it starts on a portrait of a woman, unexpected. What is also unexpected is the hair. Which, for women, clearly takes the form of a Return , if they are left to grow and not specially styled/brushed . If the hairs are a large Return of C4 skull, then we can see where, how, and why they forms. (this says a lot about baldness of “men” -> the GT of C4 skull which never closes themselves
... among others things) .



drawn Tile Texture , Text , Textile (2 dimensions , 2 KRW .)



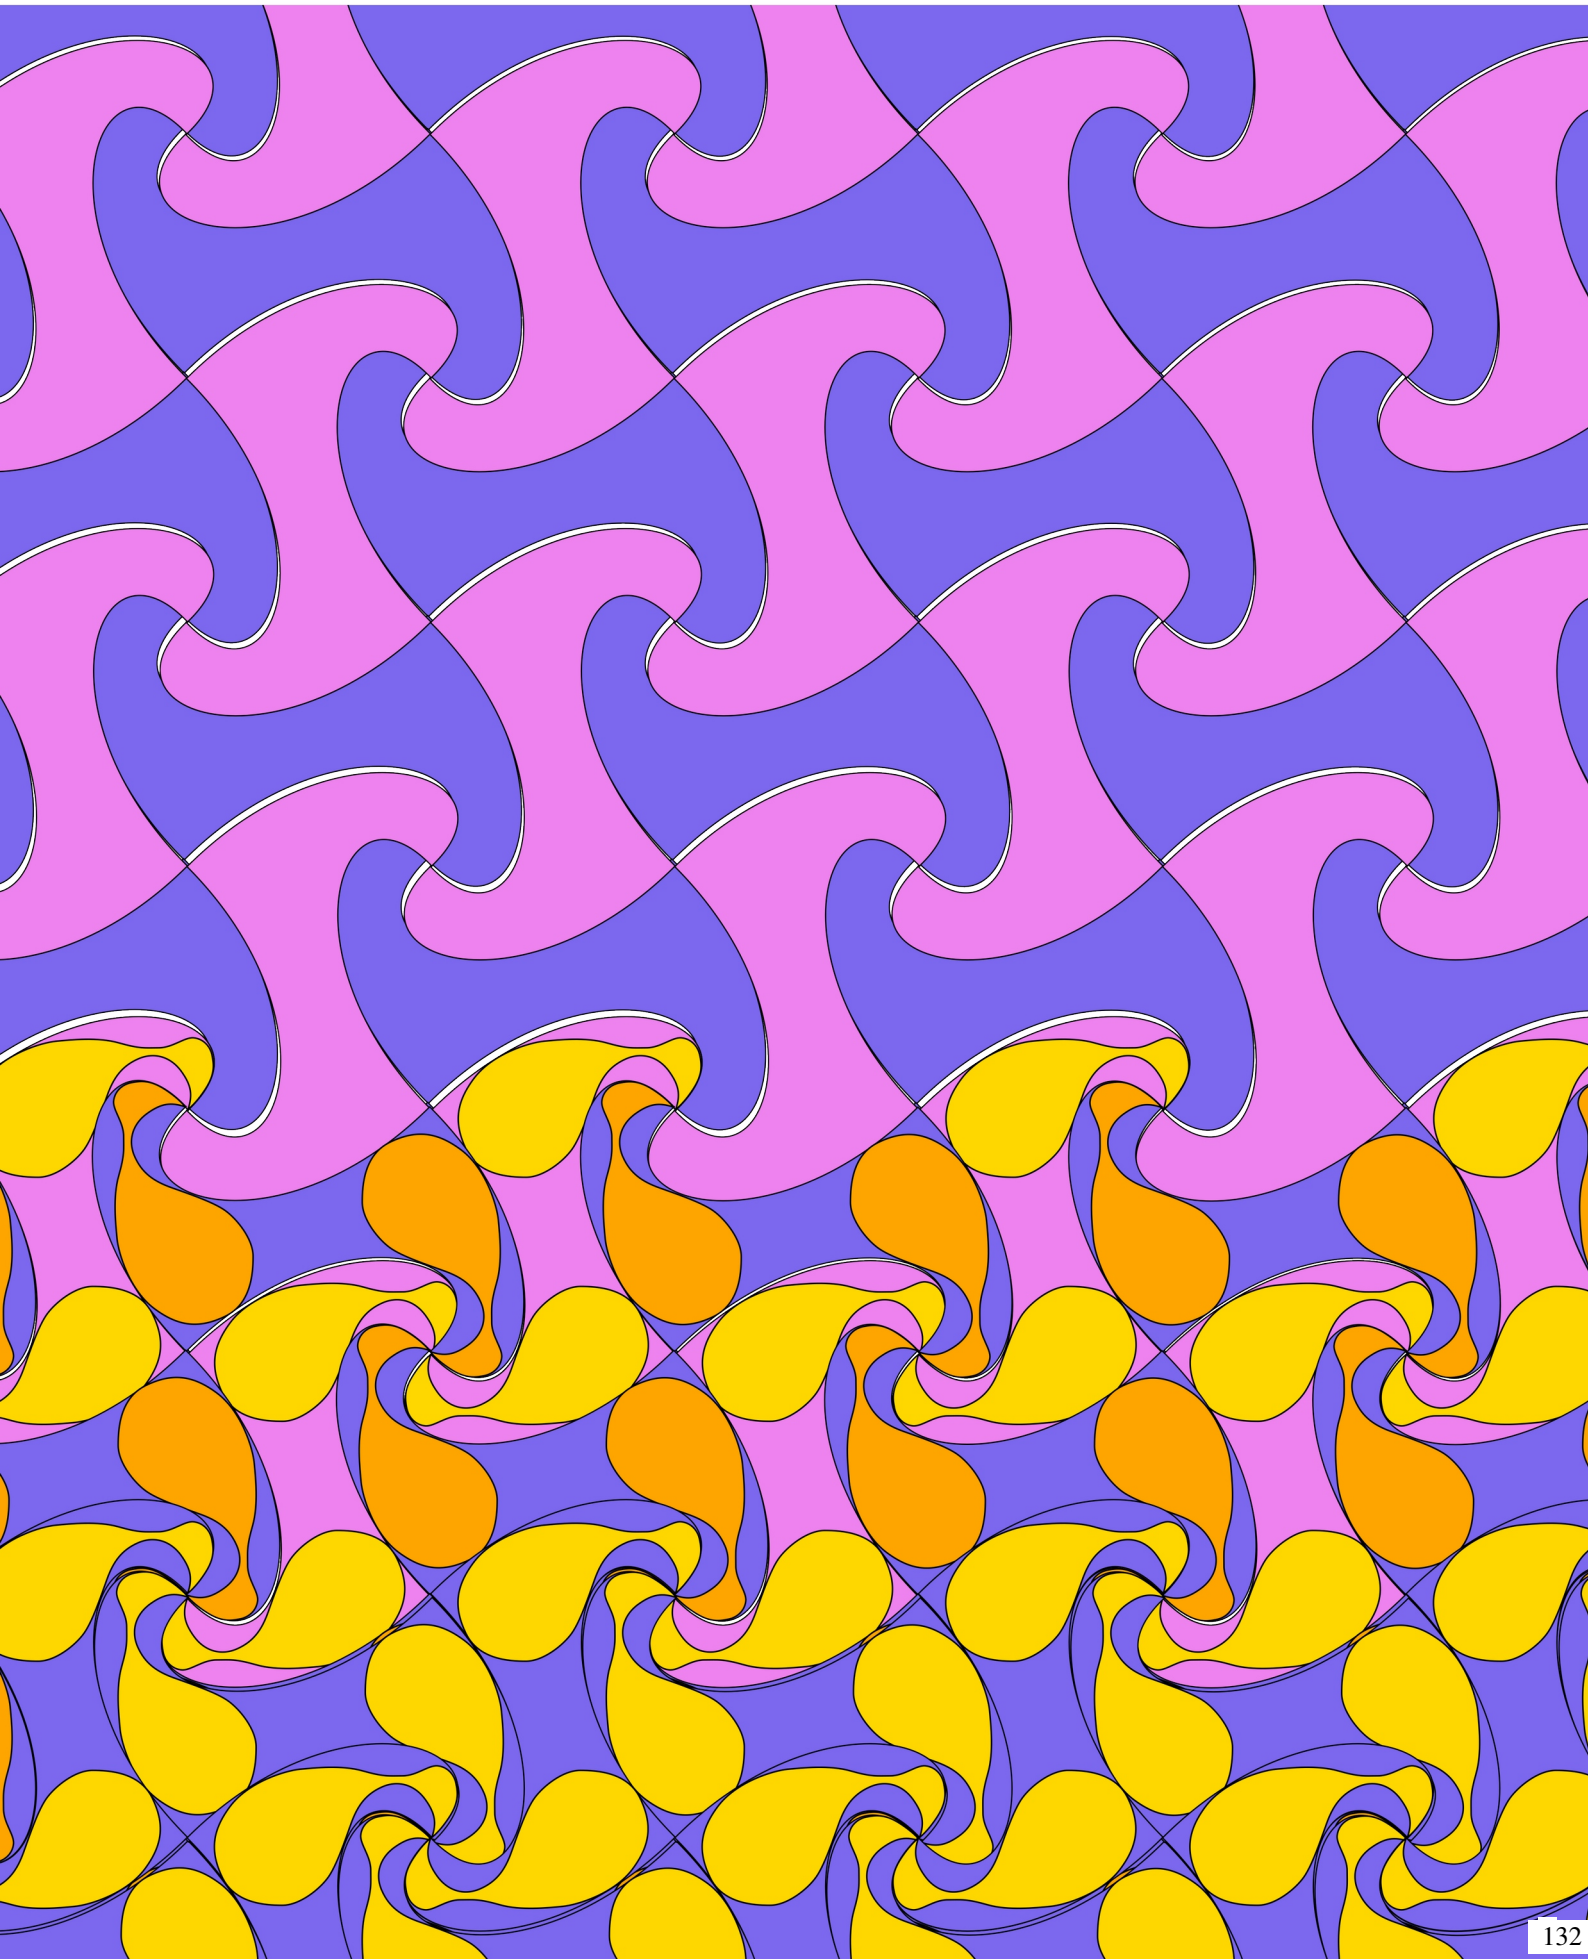
A tile for a tileable texture, to make two-branch galaxies, as well as prettier swasticas. It even has two right angles, so square lovers will like it. Fans of the vampire movie 'Blade' will too.. And for Escher ... well, that one , he wouldn't have found it , and given what he did with them , I wouldn't have wanted him to find it.
Last lines, same thing with the C over them . (in profile view) .



E.g. ; Array ;

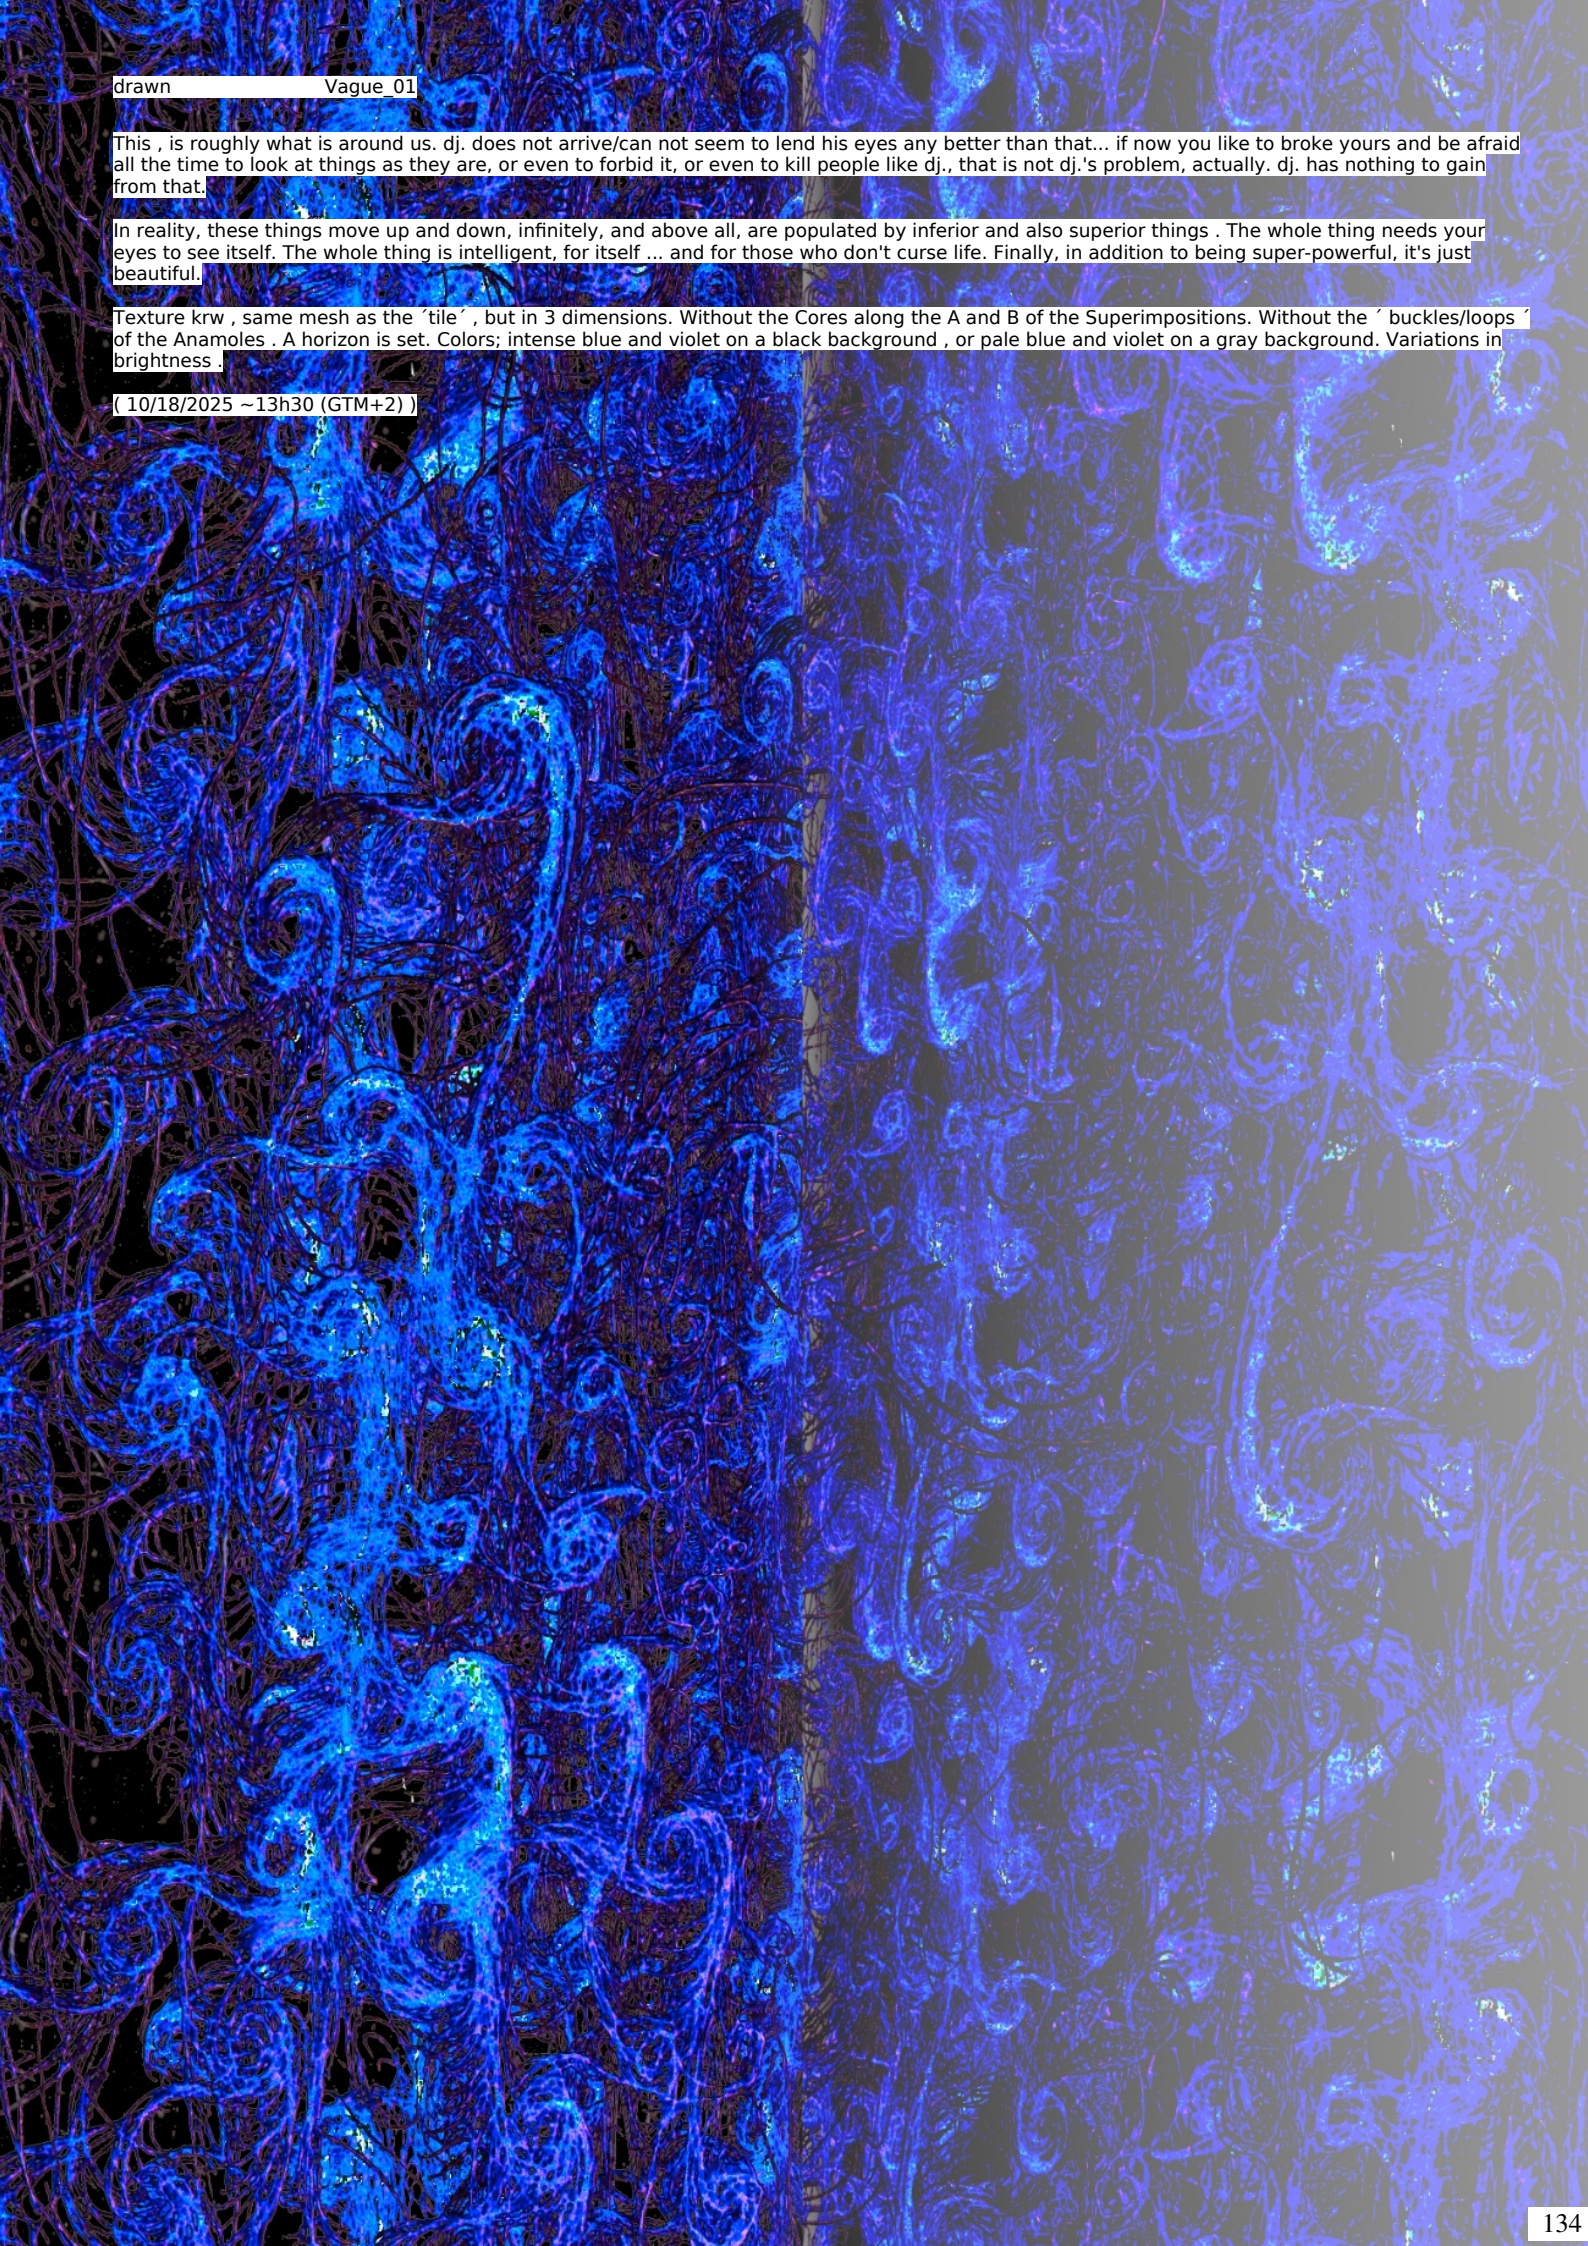
- horizontal tile
“simple translation”
shift column x -43.6% y 81.6%
shift rows x -56.4% y -18.500%

- vertical tile
“simple translation”
shift column x -18.2% y 56.4%
shift rows x 81.6% y -43.6%



drawn at_sam_01.png

Earth Anamole , with 5 Cores , done in samares from a sycomore maple .
Inlaid on black paper, A4 format , framed , under glass .
(photo ; 04/17/2025 02h19min33sec (GTM+2))



drawn Vague_01

This , is roughly what is around us. dj. does not arrive/can not seem to lend his eyes any better than that... if now you like to broke yours and be afraid all the time to look at things as they are, or even to forbid it, or even to kill people like dj., that is not dj.'s problem, actually. dj. has nothing to gain from that.

In reality, these things move up and down, infinitely, and above all, are populated by inferior and also superior things . The whole thing needs your eyes to see itself. The whole thing is intelligent, for itself ... and for those who don't curse life. Finally, in addition to being super-powerful, it's just beautiful.

Texture krw , same mesh as the ´tile´ , but in 3 dimensions. Without the Cores along the A and B of the Superimpositions. Without the ´ buckles/loops ´ of the Anamoles . A horizon is set. Colors; intense blue and violet on a black background , or pale blue and violet on a gray background. Variations in brightness .

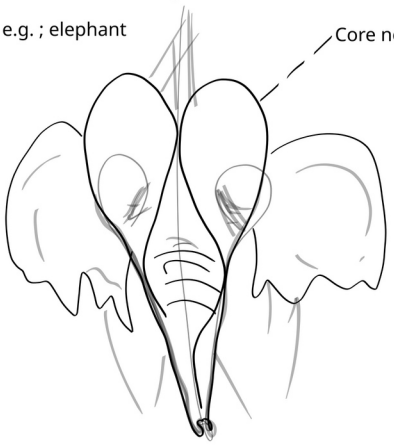
(10/18/2025 ~13h30 (GTM+2))

A LS

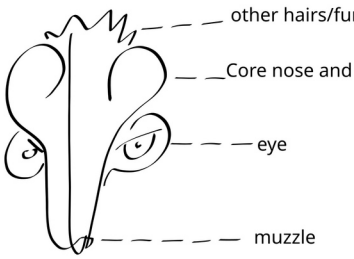
diorgonome ; (di - orgonome) double orgonome . Happens when putting something in a Core (~´coreification´ , conjugation) of two orgonomes (e.g.; love , sexual relationship) .

LG Core nose and top of head

e.g. ; elephant



e.g. ; rabbit



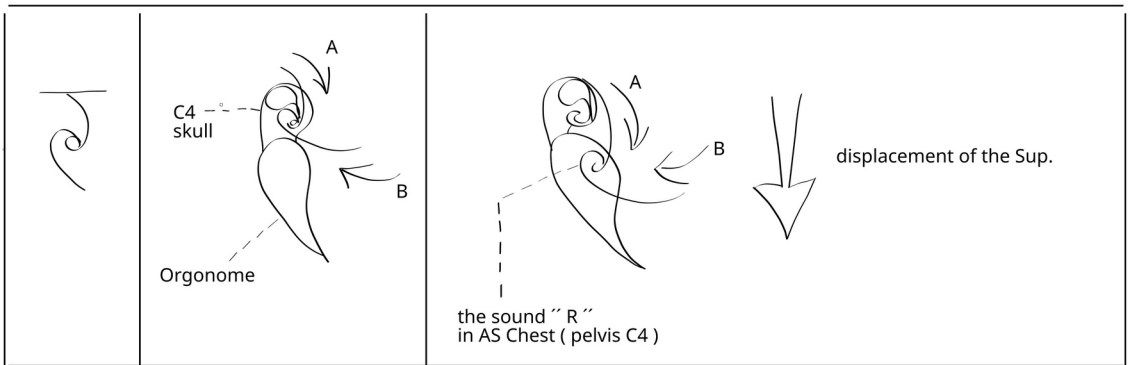
A : The same than C4 skull , inside .
B : The same than C4 skull , outside .
EE : Unknown . Maybe the same than C4 skull .
BW : The top of the two BW is visible in many species at the level of the front/forehead . Under the level of the BW of C4 skull .
Flame : Unknown . Maybe the same than C4 skull .
ES : Unknown . Maybe the same than C4 skull .

LG LS Ravage Language car

FR. ; Car ; explanation of cause . ~ ´because´ .
SKR. ; Kar ; doing , work , act ...
= opposite = passivity = the long explanations in public meetings that remain without action .

LG LS car

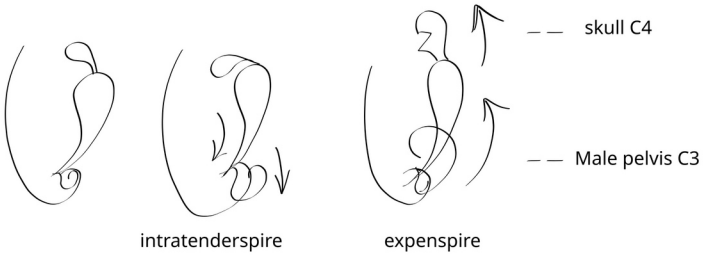
Kar is to do, is to take .
The R of Kar in Sanskrit, represents a superposition, under the line of the word. Like a superposition under the line of a head of an orgonome. The sound ´´R´´ would therefore be the one that calls, draws, and ingests the B of a Sup. of the skull Core . It seems probable, the ´´R´´ is made in praecordia (OA , AS , Chest (pelvis C4) , rapid pulsations at this level (the lowest there is in vocal, maybe, for a H-S) which unblock the zone/area.



R in SKR.	Sup. of orgonome before a ´´R´´	Sup. of an orgonome after a ´´ R ´´

(orgonome view ; side (A1))
(front is on the right .)

LG breathing pelvis e.g. ; H-S



Pelvis C3 ; its EE and BW , i.e.; its Wings, have been made bigger , and charged .
When enough big/widened and charged ; Discharge and expandere of the Orgonome .

AE,EA,C0,AS LS Tian-Shan etymology edit

Tian-Shan ; " celestial mountains " (FR. ; " Monts Célestes ")
(src. ; Rémy Dor (" Doctor of the Bishkek academy of sciences , director of the French institute for Central Asian studies."))

AE,EA,C-1,Flow,C0 LS Locations

Cairo (town) -> Gaza (country) -> Jerusalem (town) -> Bagdad (town) -> Tehran (town) -> samarkanda (town) -> Istarawszan (town) -> Fergana (valley) -> Issik Kul (lake) -> C0,ES

- Baghdad, is a few kilometers from Seleucia (town built by Alexander the Great) , and from where Babylon was (its tower and its market) . And from Alexandria/ Iskandariya .
- Samarkanda, the tomb mosque; its porticoes are in the good direction, aligned.
- Tehran ; (town , Iran) Goletkan Palace , with some visible Cores in mosaics , walls and floor .

AE,EA,C0,AS LS Locations

The geography of the linguistic root ' cor ' , is not trifling/meaningless/insignificant , since the title of this book indicates two towns/villages located exactly on the two banks of EA,C0,AS (Arrival/Atrium/Entrance .. of Sup.) . (It is a ' geolography ' (neologism dj. (geo - logos - graphics) A geolocalized linguistic term forming a graphic layout/trace/outline.)) .
Also, for centuries and centuries, most of the great civilizations goes perish on it. (the Huns, the Chinese, Mongols, Russians, Turks, Hebrews, Egyptians, Greeks (the line of Plato was assassinated there by Alexander the Great , (Alexander the Great himself died there , of a fever in Babylon) , right there) .

AE,EA,C-1,Flow,C0 LS Locations cor

- ´´ Cairo ´´ ; (town , in Egypt) exactly on EA,C-1,Flow,C0 .
- ´´ Kyrgyzstan ´´ , kirghizistan , Kirghiztan ; (country) exactly on C0,AS . " Kyrgyz is a Turkic language of the Kipchak. (The Turkic languages are a language family of more than 35 documented languages.)"
Etymology ; " Two groups of interpretations ; ´ - Kirk ´ ; forty , or ´ - Kir ´ ; steppe . For the meaning ´forty´ , there are legends speaking about forty virgin young girls who fall pregnant (either by a erant red dog, either by a killed prophet transformed into a river, either by the white foam of a river) alongside the princess (the daughter of the khan of the country.) . (´ Anal Haqq manam Haqq ´ Anal is the truth , I am the truth .) (´ ana el-hak mana el-kak ´ this is god and that is god (first gesture, the fool points to the sky, second gesture, he shows himself.) . " (Parlons kirghiz , manuel de langue , orature et littérature kirghizes , Rémy Dor , Harmattan , 2004)
(dj. ; Kirgistan is written to be pronounced kirgistan with ï as in EN.; ´Bird´ . Etymology probable coming from - Kirgiz ; to bring in , to let penetrate . - Kir ; to enter . - Kirich ; to enter together , to begin , to put oneself to . - Kiruu ; entrance . - Kirin ; to take a bath , to bathe , to enter in the water . - kirinich ; swimming , action of swimming . Kirgistan is on EA,C0,AS × EA,C2,W2,EE,BW,bottom (praetermitto) . (´ praetermitto ´ in Latin means ´ to let pass , to pass beyond , etc. It is a word chosen by dj. to describe the area. But ´ Kirgiz ´ in Kyrgyz Turkmen (- Kirgiz ; to bring in , to let penetrate.) is perfectly suitable. EA,C0,AS is a location of passage where the Flow of the earth must enter , must be let pass beyond the limit of the Edge External of the 2nd Wing of the 2nd Core of the Earth Anamole .)

AE,EA,C0,AS cor (At the level of the end of AE,EA,C-1,Flow,C0 , at the level of the ´´ Praetermitto ´´ of the planet Earth .) LS Locations cor

- ´ Korgon ´ ; ... a town called Corgone ! (TRK. ; ~ qur gan , ~ коргтои) .
The town is exactly on EA,C-1,Flow,C0 , it is at the level of the AS (Arrival/Atrium/entrance) of C0 , it is exactly at the Base of the big Flame that causes global warming , and therefore it is also exactly exactly at the Base of the Nucleus of this Flame.
Korgon is in Tajikistan. It is between Istarawszan (town) and Zbiornik kajrakkumski (lake) . It is just below the Fergana (valley) (Kyrgyzstan) , with its ´heavenly´ horses . (And a little further upward, there is a lake with an eternal rainbow above it.)

- ´ Korgon ´ ; ... another town or village called Corgone .
The town is exactly on EA,C-1,Flow,C0 , it is at the level of the AS (Arrival/Atrium/entrance) of C0 , it is exactly at the Base of the big Flame that causes global warming , and therefore it is also exactly exactly at the Base of the Nucleus of this Flame.
Korgon is in Kyrgyzstan. It´s between Karzhantau (town) and Kurama (town) (just next to it , there is ´ Kashkar ´ (~ organization)) .

´ Korgon ´ and ´ Korgon ´ , the two towns or villages that are called the same way , are each on a slope of EA,C0,AS .

Between the two ´ Korgon ´ , there is a cave which is called ´ Obi-rakhmat ´ , where were found the oldest traces of ... us ... (arrowheads , skeletons , ovens , etc.) , dating back 90,000 years (alongside ~5,000 skeletons of other animal species .) . Within a 500-meter radius , there are at least 3 places which are called ´kor´ or ´kar´ something...

Some other locations are called ´´ Korgon ´´ between the two and upward .
- Korgon Tash , Bazar-Korgon .

Etymology ´ Korgon ´ ;

In the Kyrgyz language (coming from Turkmen) ; - Korgon ; fortress , enclosure . - Korgo ; to defend , to protect . - Korou ; to protect, to preserve . - Korouk ; enclosure , fence , palisade .
Korgon designates a fortress , an enclosure , a fence , a place to protect , a Zone to Defend (ZAD) .
The Korgon are on EA,C0,AS × EA,C2,W2,EE,GT,bottom (praetermitto) which is a ZAD . (´ ZAD ´ in French is an acronym which means ´ Zone to Defend ´ (´Zone À Défendre´) when speaking of ecological zones threatened by big useless projects of the industry , etc. It is a word chosen by dj. to describe the area . But ´ Korgon ´ in Turkmen Kyrgyz (Korgon ; a fortress , an enclosure , a fence , a place to protect .) is quite suitable . EA,C0,AS is a location of passage where the flow of the earth must enter , must be let pass beyond the limit of the Edge External of the 2nd Wing of the 2nd Core of the Earth Anamole . It is a location which is one of the most important ecological sites of the Earth , constantly threatened by some industries/bombs/nuclear etc. (EPR)) .

- Karakol ; (town on the rive of Toktugul (lake/reservoir/dam) surrounded by - Kara-Suu , - Kara-Tektir , - Kyrkkazyk , - Karasu , - Karadzhigach) (another town is called - Karakol , exactly on EA,C0,F (on the rive of Issik Kul (lake)) . (Etymology ´ Karakol ´ ; Police station , military barracks ...) .
- Karavan ; (town) .
- Chorvoq (town) , - Kara-Bulak , - Kurulush , - Karamazar (C0,AS -> Taszkent (town) (side W2 (North-West))) (next to Korgon A2 . (and of Obi-Rakhmat)) .
- Lots of other villages and towns begenning with ' Kara ' .
- Charbak , - Kochkor-Ata , - Kerben , - Yanikurgon , - Kirguli (next to Fergana (town, valley)) , - Kurshab , - Kara-Bak (town) , - Chirkay , - kara-Kuldja , - Karabulun , - Karaburgen , - Kara-Oi , - Karakeche , - Kyzylkurgan .
- Zbiornik kajrakkumski (lake)
- Karzhantau ; (mount) (C0,AS -> Taszkent (town) (side A2 (North-West))
- Kurama & Chatkal ; range (mount) (C0,AS -> Taszkent (town) (side A1 (South-East)))
- "sacré cœur" ("sacred heart") ; Christian cathedral in Kaszent (town) .
- Kara-bak (village) , - Chon-Kara (village) , at the location where the Kyrgyztan , the Tajikistan , the Uzbekistan , the Kazakhstan , the borders of the three first form a kind of Superposition , a Whirl that is going until this point.
- Karakoram ; big mountain range (´´ praetermitto ´´ (C2,W2,BW,bottom , just next to C-1,Flow,C0))
- Karashahr ; (town) (EA,C0,W1,E1) W. of Turfan .

- Karasai ; (lake) (AT,C0.,F,A,mid) (N44°58'58" E79°48'05") (" next to the lake 800 meters to the northeast, in the crest of the Dzungarian Alatau ridge, there is an unnamed peak with a height of 3835.6 meters above sea level. "

- Korzhun Zapadnoye ; (lake) (AT,C0.,F,A,mid) (N44°55'39" E79°37'36) , (" 246 meters [...] located on the southern slope of the Dzungarian Alatau ridge in the Eskeldinsky district of Almaty region. " (etymology ; " Dzungarian (Junggar Men) (dj. « the Junggar aryans » (« les aryens Junggar ») ..) "

The two ' Korgon ' and all these towns/villages/places are at the intersection of Uzbekistan , Tajikistan , Kyrgyzstan , a little North of Turkistan , a little South of Kazakhstan , a little East of Turkey , a little West of the Kashmir region (and the Brahmans Indian/Vedic/Sanskrit) , around the Fergana (valley) , between Zbiornik kajrakkumski (lake) and Issik kul (lake) .

AE,EA proportions world map etc.

Salvaged a plastic globe from a trash can. 30cm in diameter. Before cutting it up and remaking a patchwork with the C of the AO, gluing back the map pieces over it, you should print the 5 Cores in advance , more or less the right size for this globe. Basically, you would have to resize the Core (version 2) five times differently in front view .
These are ~ these measurements for the moment ;

C-1 : width ; 27 cm , height ; 40 cm high .
C 0 : width ; 7 cm , height ; as it is/on their own .
C 1 : width ; 7 cm , height ; as it is/on their own .
C 2 : width ; 39 cm , height ; as it is/on their own .
C 3 : width ; 35 cm , height ; 27 cm high .

LSRL puta

SKR. ; Puyati -> GR. ; πύον -> LAT. ; Puteo , ere ; rotten . pur , puris . etc. -> to stink (FR. puer , putain . (~ “ damn ” , ~ “ fuck off ” , etc.))
SKR. ; Puta -> -> LAT. ; Putare ; purify (purus; eget src.) -> Pure , computer (FR. ; Pur , computer , putain (~ “ damn ” , ~ “ fuck off ” , etc.)) .
= confusion = the same word for rotten and pure .

- Pus , puris ; n. (πύον) pus , humor , [inj] filth/garbage , pl. pura .
- Puteo , ui , ere ; (pus) to be rotten (spoiled, corrupt) , to stink .
- Putare ; (1) to clean , to purify , (2) to calculate, to estimate , to assess (FR. ; supputer) count . (SKR. ; - पुत puta ; to purify (≠/count, to calculate, to estimate , to assess (FR. ; supputer) , etc.)) .

LSRL faust

GER. ; Faust , Dr. Faustus of Goethe , damned by the devil because he is a scientific doctor , and become unhappy .
LAT. ; Fautor ; happy/glad/fortunate/pleased , the one who favors , supports , sustain . (Faustus ; son of Sylla .)
= opposite

LSRL femme

LAT. ; foemina ; woman , feminine (FR. ; femme) .
LAT. ; foemora ; below/under , femur , etc.
The same first 4 letters and the last .
= patriarchy = woman below/under man , by default . (because a man is a man if he feels his pelvis, below/under/beneath his own orgonome .)
= man named woman (not God who named her) , not from his own rib , but from his own pelvis .
e.g. cornuatus ; ´ nam ´ (opposite of ´ man ´ (FR. ; ´ emmoh ´ (opposite of ´ homme ´)) , or else ´ elam ´ (opposite of ´ male ´) .

LS eterosexual

(ether - o - sexual)

LS epil. dj.

Save your tongue, you'll have a chance to save your penis.

LS epil. dj.

dj.'s maternal inheritance ; some insults , some horrible and violent words to speak to women, and to speak about women. dj. wants to be nice and only has “ so, do you get laid well ? ” that come to him in mouth .

LSRL computer + puta , in addition

LAT. ; Autumo , as , are ; to think , to estimate (like putare (2) , like computer) .
EN. ; Computer ; (putare) (≠/compostus , because not based on EN. ; to put) = instead of calculating machines , they are some machines for purifying , cleaning , or some machines for rotting, spoiling, stinking, or some machines for putting, like compost, for piling up = “ compurer ” (the true noun in 2025) .
E.g. cornuatus ; comautumar .

(in addition ; LAT. ; Git ; nivelle (plant) . LAT. ; Promptu ; visible , manifest)

LSRL hardcore

EN. ; hard ; ~ hard , thick , difficult , armored ..
SKR. ; हृदय hardaya , हृद harda , हृद् hṛd ; heart .
= opposite = hard denotes the hardness , the solid and immobile cold , rather than the softness , the passion , the feeling , the emotion ... = connotation of hardness over the heart = forced bodily armoring = hardcore is a tautology = the hardcore supervillains , actually , have a superdouble heart .

LSRL avia

FR. ; gas station brand for cars on all the country's roads .
LAT. ; avius , avia , avium ; without a clear path , impassable (a-via) .
= a whole country without paths , impassable .

LSRL star/aster/astre (edit)

E.g. cornuatus ; LAT. ; Instar ; value, quantity, magnitude .

LSRL faire

FR. ; faire ; to do , doing thing , to build, to activate oneself .
LAT. ; fer ; to carry .
= weighting = FR. ; “ il faut faire des choses ! ” (EN. ; “ we must do things ! ”) means “ we must carry things ! ” .
e.g. cornuatus ; ´´ we must core things ! ´´

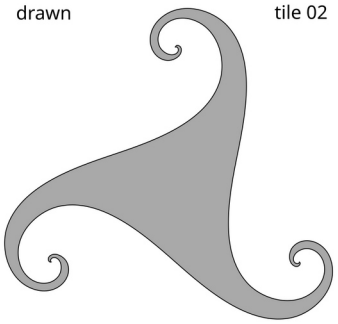
drawn

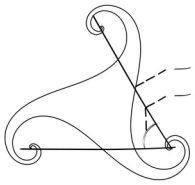


tile 02 Texture , Text , Textile (2 dimensions , 3 KRW .)

3 kRW at a 60° angle between them . (~ the same half-curve than tile 00)

Then developed by adding three Cores in side view , at their places . (the Core extends beyond the Edge External of the GT , just to see if the GT fit behind , into the Flame of the Core of the tile next to it (Just a test , it is not the case .) .) .

e.g. ; A bouquet of roses , The 6 sides of the cells of the bees ...

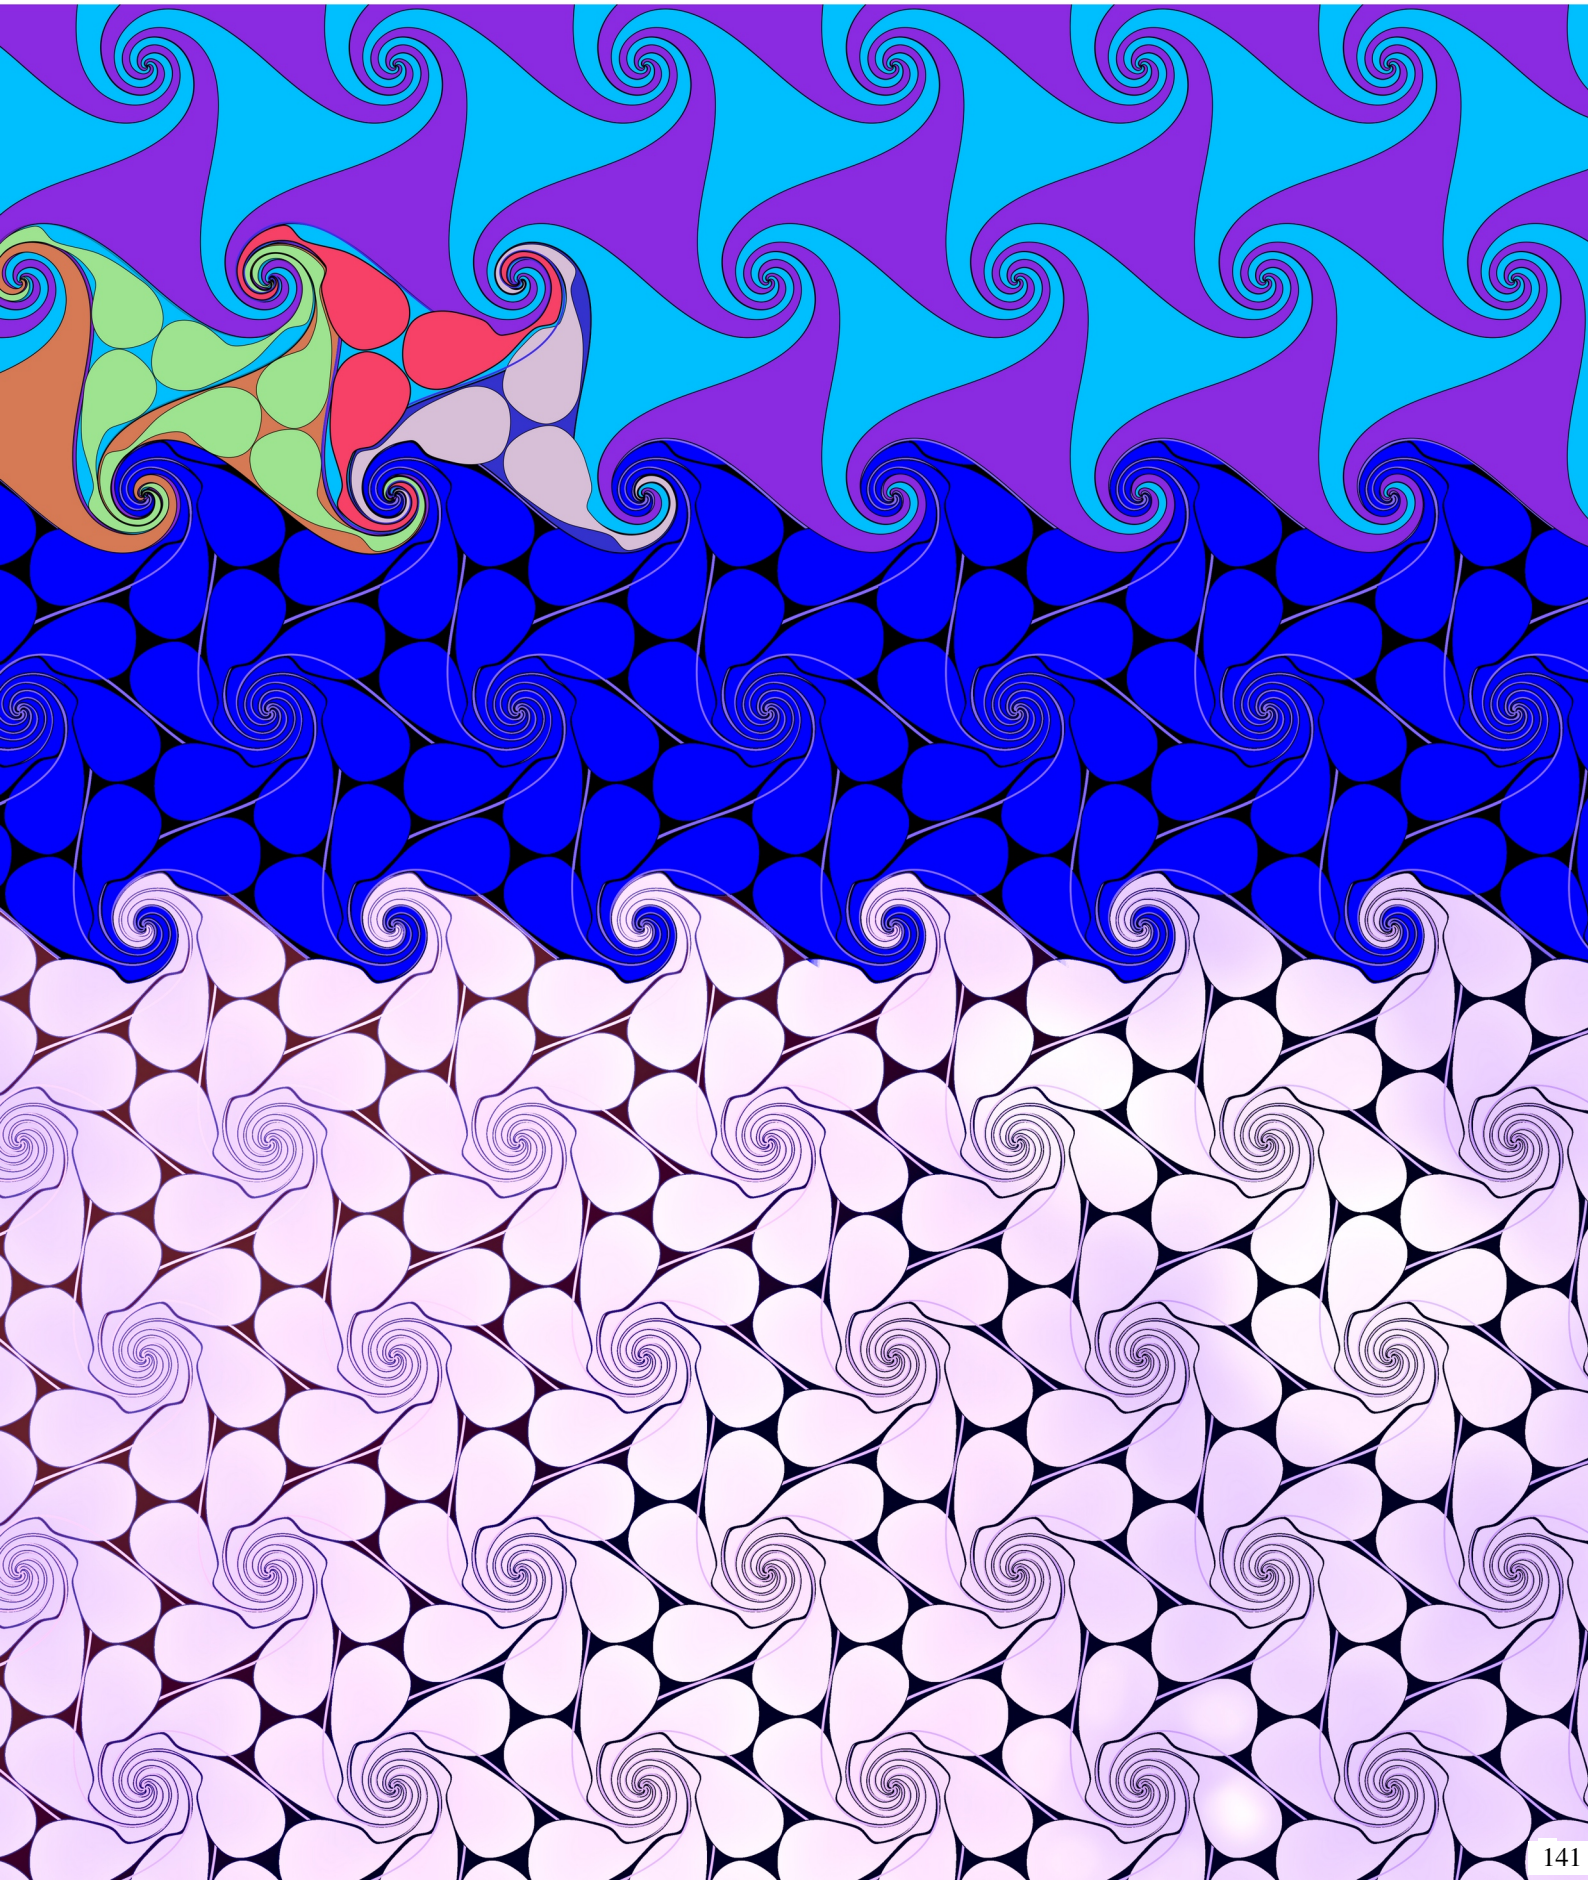


E.g. ; Array ;

- tile 1
“simple translation”
shift column x -24.41 y 0%
shift rows x 37.8% y -31.1%

- tile 2
rotate 60°
“simple translation”
idem

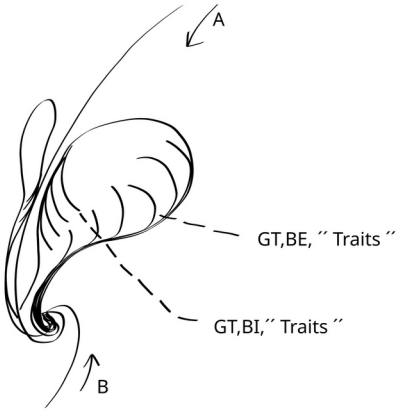
src ; Tile extracted from a 4500-year-old Aegean bowl (Reference : ' s_18 ' in the list of https://orgone.dev/corgone3.php . (The ref. ' s_4 ' and the ' s_10 ' too have the same design .)) .
But in their culture, no center of an Aegean spiral wave was extracted in a unique tile .
A connection with the Celtic/Breton/Irish ' triskel ' (~ symbol) is possible .
But in their culture , no ' triskel ' whatsover was used as a tileable motif .



A e.g.; wind

Wind; The rhythmed "phase" between the C of an anamole can be heard .
possibly Invala's body .
(e.g. ; ~10.22.25 (when it was blowing in the high plane trees .) very distinct , brief moment of silence , every ~3/4 of a second .)

A Core Wing W1-W2 BW,EI,´´ Tracks ´´ , BW,EE, ´´ Tracks ´´



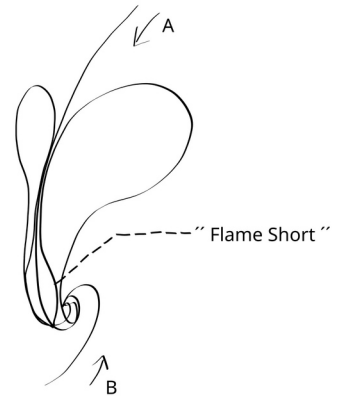
The BW form some Tracks/Trace/lines/stroke/underscore ;

- The Tracks in Edge External of the Core , made by the EE (BW,EE,´´ Tracks ´´) , are the Tracks at the beginning of the BW course/path/trajectory , along the EE , which also move towards the Internal while ascending .
These are ramification of the BW . (which form little beginnings of BW .)
(It can form the sort of ´´veins´´ along a samarre/samara , the fruit of a sycamore/ pseudoplatanus maple) .

- The Tracks in Edge Internal of the Core , made by BW (BW, EI, ´´ Tracks ´´) , are the Tracks under the end of the BW course/path/trajectory , along the Flame , which direct back towards the External while descending .
These are ramification of the BW .
(It can form the dark circles under the eyes . It can form the ribs of an Orgonome .)

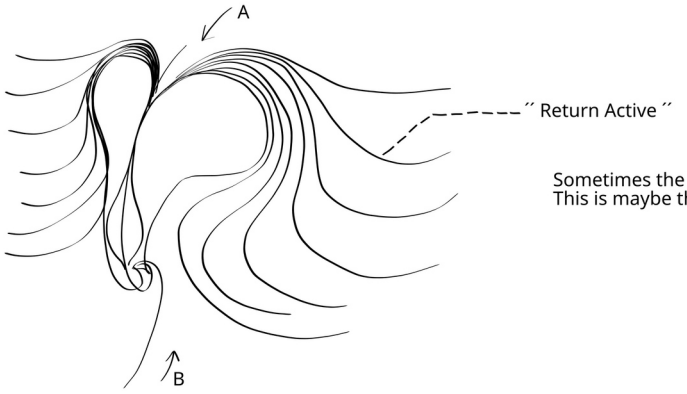
These two Tracks are inverse between themselves and face each other on either side of a Wing .

A Core ´´ Flame Short ´´



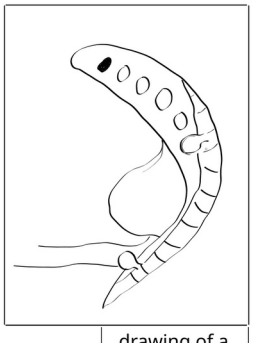
A Flame can be very Short/Small/Slight/little/low compared to the size of the Core and therefore far under the BW . It is always at the Base , nearly at the very bottom .

A Core ´´ Return Active ´´



Sometimes the Return forms several lines that descend , then ascend again , moving towards the External .
This is maybe the AS in a confined medium (rather than a Return .)

LG ref enigma embryo e.g. ; H-S

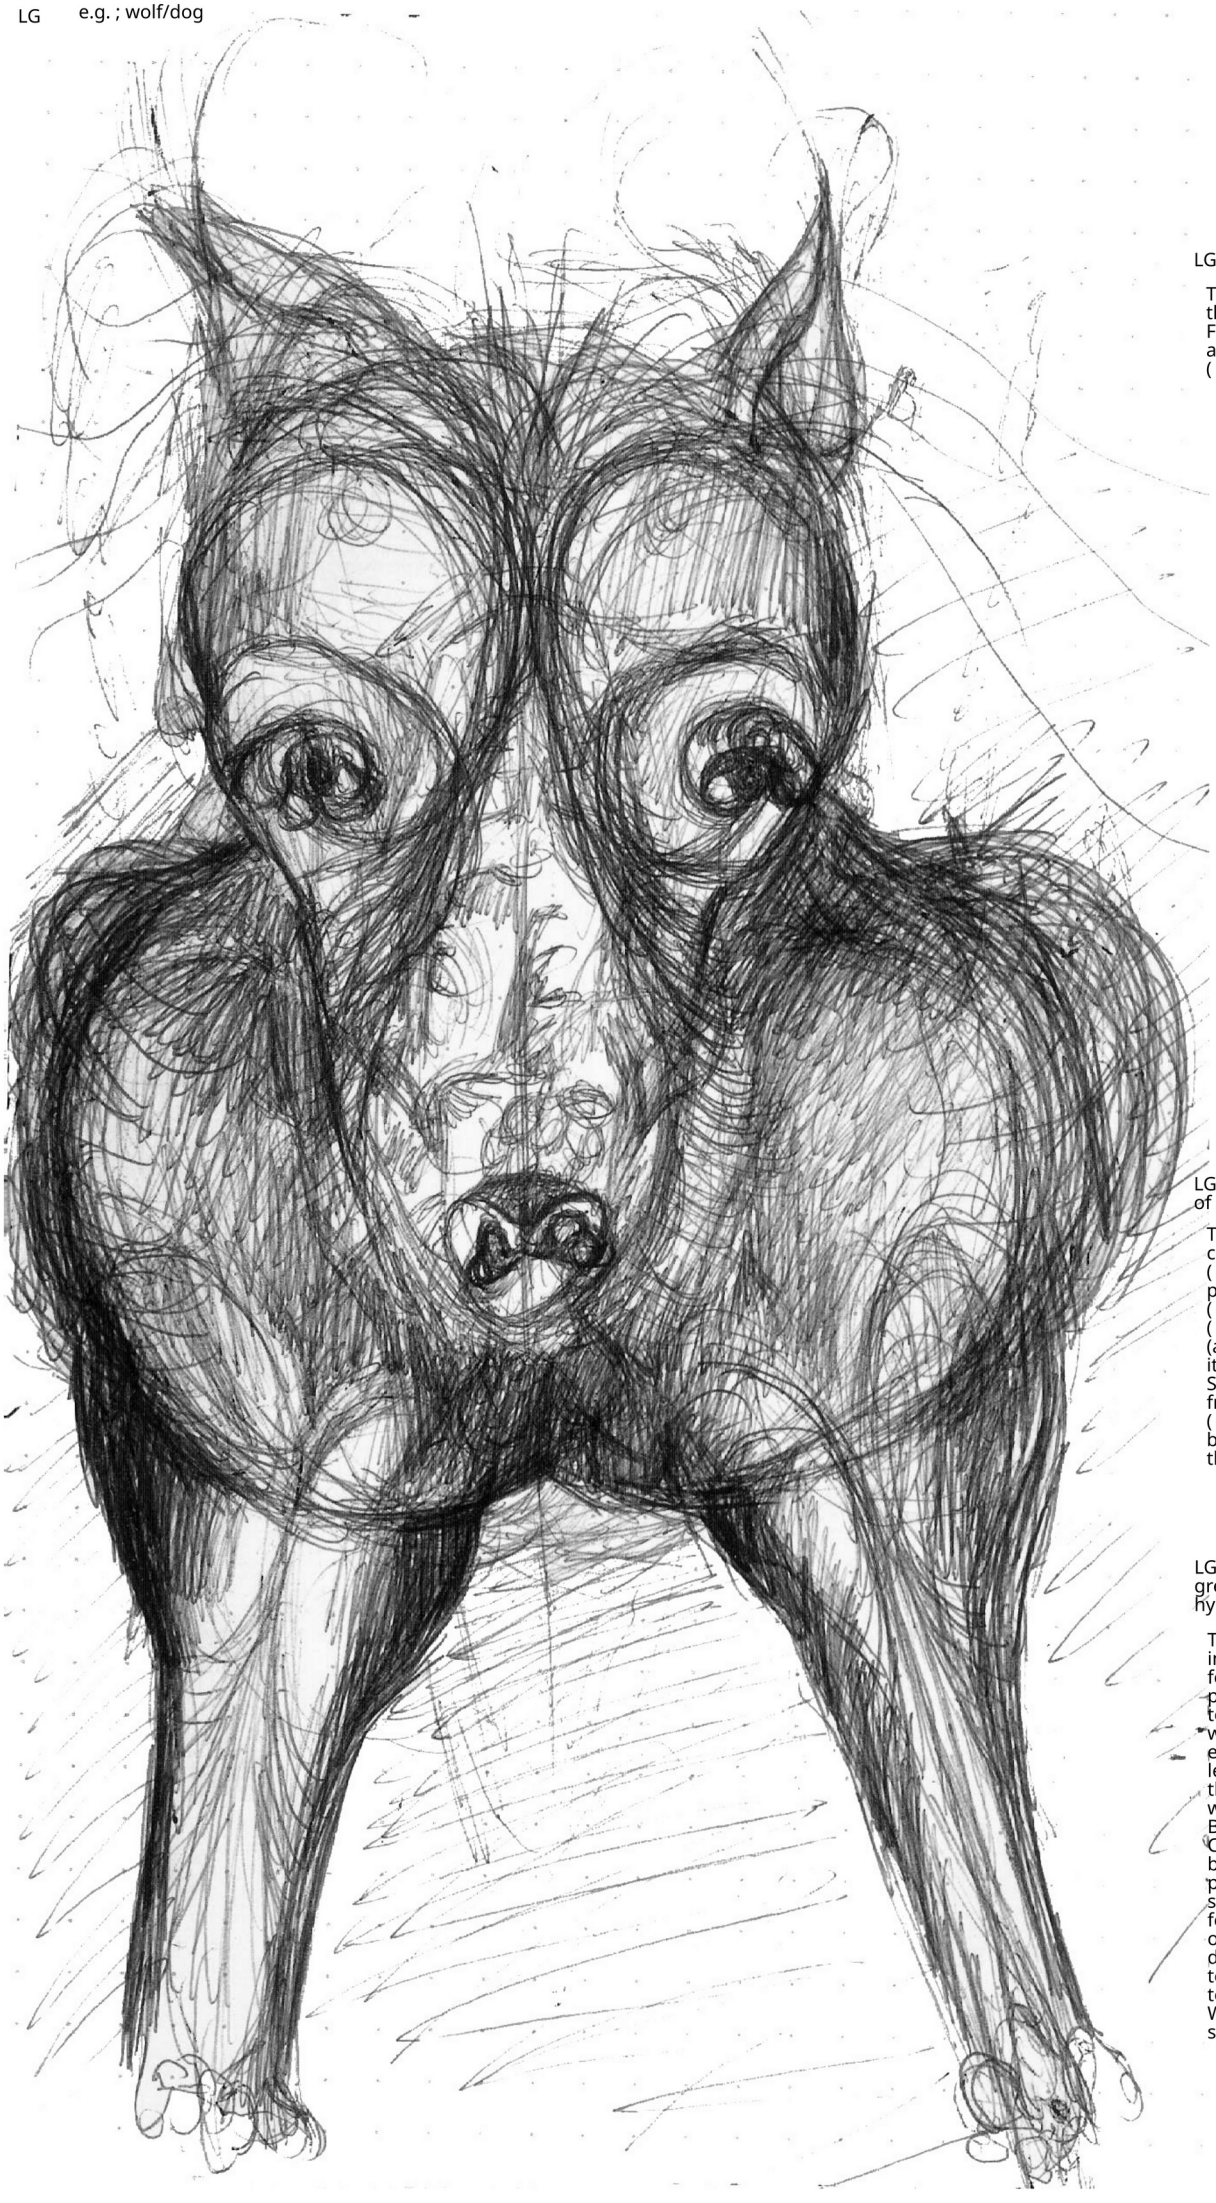


Eye , black spot/mark aligned with the 4 spheres and at the very end .
4 balls that will form ;
Larynx , lower jaw , nose , and ears .
“ Pallets ” hands and feet .
Segments in the worm at the rear . About 50 visible .
Tail , which will shrink .

Then the head grows , and forms itself .

LS hymenoptera , weevil , paralysis ... dreadfull

At what was appeared , there's a story about “ hymenoptera ” that “ pierce the nerve centers between the legs of spiders and weevils to paralyze them while keeping them alive and immobile , then lay eggs on them , which will do larvae that will grow inside the spider or weevil . (LAT ; ” Hymen , inis ” ; ads of marriage . Hymenaeous ; coupling/mating of animals . (or ~ “ membrane ” or ~ “separation” or ~ “notch” .) .) . Wasps , bees are hymenopterans . Hymenopteran = ~ 2 pairs of wings beating at the same time .
(The weevil has a trunk/proboscis . Its trunk and head form a Core , the Base of which is elongated , this is the trunk .)



LG AO ears Flame of a Core

The ear of a wolf/dog , is maybe the Flame of the Core of a mobile Flow B . (So , there would be an ES at the Base .)
(AO,skull C4,BW,C1 ears,Flame)

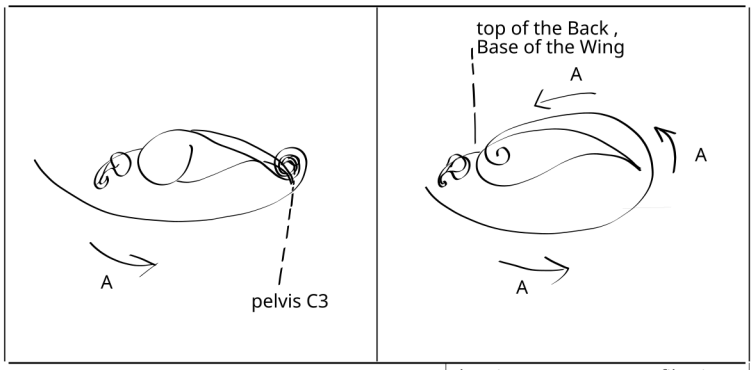
LG AO nose/muzzle C nostrils + N of skull C4

The nose , muzzle , snout , etc. are constituted of the Core nostrils (AO,skull C4 ,Flame,C0 nostrils) plus the Nucleus of skull Core 4 (skull C4,Flame,N) .
(the Nucleus is heart-shaped (acute/pointed) , and terminates itself at the very end of the Exit of Superimposition , towards the front, and join the Core nostrils .)
(On the nose of a H-S , it is visible by the two lines , on either side , that descend to the nostrils .)

LG AO female uber/mamma/ gremium/breast/udder/teat hypothesis

The teat/udder/breast are lower in other species because the female Flow would be truly more precious , difficult to preserve and to make bigger/increase/enlarge without destroying everything else . (H-S is enough idle/of leisure and immobile , therefore the female Flow in this species would be stronger , therefore the Big Whirls of the Wings of the Core that form the teat/udder/ breast can go further in their path/course/trajectory , that is to say higher . (teat/udder/breast = female pelvis C4,BW,EE)) (in other species , such as wolves/ dogs , there are more than two teat/udder/breast , is it as many teat/udder/breast that BW of Wings of Cores ? Do they have several female pelvis C4 ?) .

LG bird Core ptesis (flight) edit ; error



drawing Orgonome profile view

Same drawing than before , but the Base of the Core ptesis (flight , ((FR. ; vol) , (LAT. ; volare ; to fly .) , (GR. ; πετομαι ; to fly (birds , ect.) , f. ; πτησομαι . inf. ; πεσται . postr. ; επτην ; to fly . πτηναι ; which fly . πτησις , εως (η) ; flight , what is flying . πτηνος , η , ον ; which fly . πτηριχ ; able to fly (with wings/feathers) .) .) is rather the top of the back , just before the nape . (and it fills the rib cage up to the praecordia .)

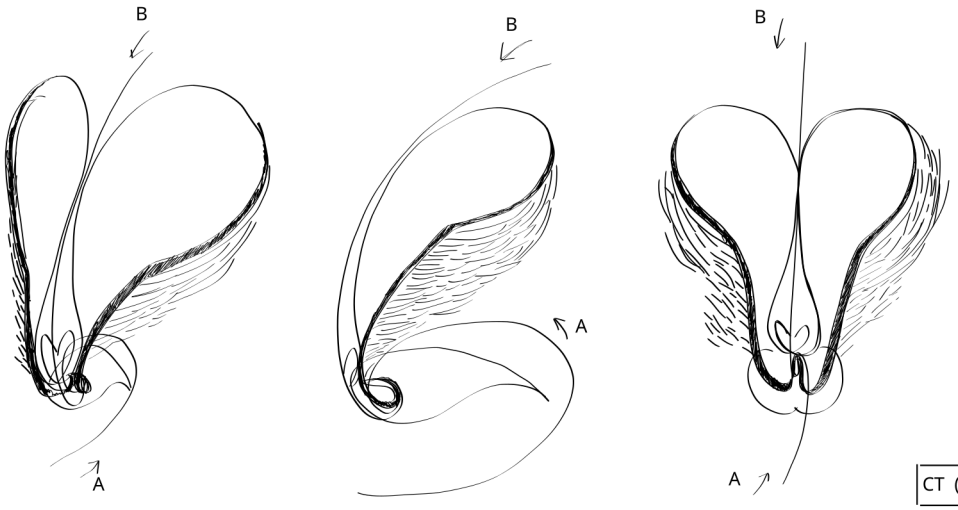
After it had pass pelvis C3 , the Sup. ascends along the back to the Wing , where it will Superimpose with a Flow B , which one , due to the large quantity of e. arriving there , will forms a Core , that will pulses rapidly ;
These are the bird's wings , the Wing of the Core flight .

CS (e.g. ; view of " a magpie ") ~11.23.25 ~07:47 (GMT+2)

Pelvis C3 , the tail rises itself , just before a wings charge (Core flight) . The A , attracted by the chest (pelvis C4,AS (Atrium/Arrival/ praecordia) is sufficiant to detache the Superimposition of Pelvis C3 and ascend again along the back .

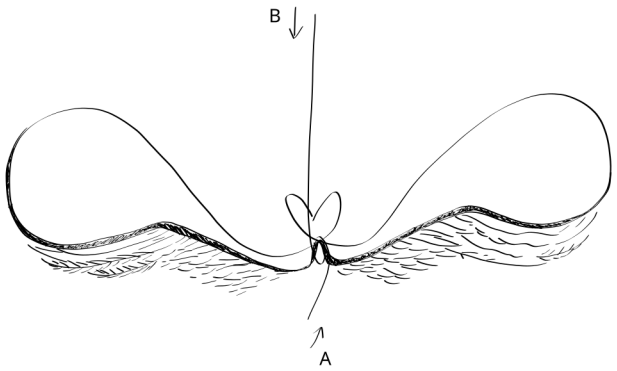
The Flow B arrives at the same place (Pelvis C4,AS (Atrium/ Arrival/praecordia)) , but from above and the rear (rather than from below and the rear like the Flow A) .
But this is not the Core of the Flow A , but the Core of the Flow B .
The feathers are then disposed/ arranged/layed like the hairs/fur on other Orgonomes , at the External of the Edge External (EEE) .

LG bird Core ptesis (flight) pulsation



CT (contraction (A.B)

Sup A.B goes towards the N to form the ES .



(~4 "rows" of feathers)

DR (expansion (A.B))

After an ES in the neck and the head , passing through the N .

The N (heart-shaped) of the Flame is in the Orgonome . (probably the heart organ on one side , and the spleen on the other .))

The head is exactly like an "Anther" of an orchid/ caelogyne .
It is an ES of the Core ptesis (flight) , whose the curve is opposite to the one of the Sup. (A.B) during the Discharge and after .

The tail follows the Sup. (A.B) , if it is in expansion , the tail is downward , like the Sup. , which is " uncoiled/ unrolled/unwinded "

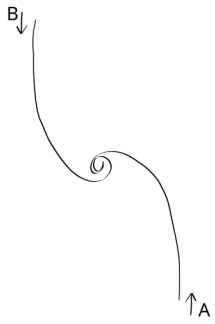
epi dj. Core ptesis discovery .

One morning ~12.12.25 , Friday (Freya Day) , around ~08h20 (GMT+2) , dj. was smoking silently next to about ten students , one of whom was directly facing dj. , on the other side of the library's post , waiting that it open . It was about 15 minutes thet dj. was there , and again 10 to wait . dj. was looking to the exterior of the corridor, the distant sky . Several groups of birds flew overhead , all this time , some littles , numerous , some gulls . The gulls stayed , and the others too , surprisingly , by sheer/strenght/force , doing and doing again circles above , clearly visible from where dj. was . dj. thought to himself , sadly , that the sort of "break" of their wings , the angle at the 3/4 of their length , dj. could not explain it . Then dj. entered to the library . ~1h , dj. displaced himself from one table to the one in front , then dj. put out the computer . Then , facing dj. , dj. looked better . It was a window , where you could see from above , a wall of the philo room below . There was an acrylic painting of a goose in full flight , it extended its wings very high .
So dj. tried one last hypothesis , looking at the painting , it worked .
Then dj. took again the last bird drawing and the descriptive text and modified it on the fly . It was good . dj. sent the drawing to ☼ , al , all , chlo .

.

hypothesis 00

neither A nor B contracts
A and B equal in size ,
movement , force ...



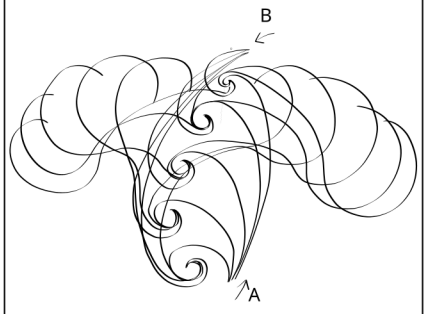
´´ balance ´´
B is equal to A
A comes from the O
B comes from the ext.

A and B do not move , do not contract ,
Only the Wings of the Core , following the CTDR .
function/works maybe .

hypothesis 01

A Contract
B weaker and always equal to itself .

´´ imbalance ´´
B weaker than A
A comes from the O
B comes from the ext.



A contracted
= Wings deployed/spread vertically .
B contracted
= Wings deployed/spread horizontally .
function/works maybe .

hypothesis 02

B Contract
A weaker and always equal to itself .

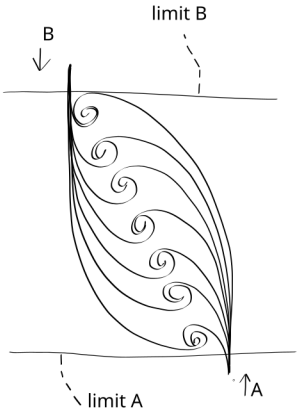
´´ imbalance ´´
A weaker than B
A comes from the O
B comes from the ext.
(e.g. ; in full daylight)

If it is B which contracts ,
wings deployed/spread horizontally .
= contraction (CT)
Does not function/works .

hypothesis 03

A and B Contract alternately .
A , then B

A has a CTDR , B has a CTDR .



---

hypothesis 04

A and B alternate from top to bottom . The distance between their lines varies . The whirls that they form vary . All angles vary . But their end , their common Exit (ES) is always stuck/glued together or side by side . This angle of the ES is shown in this drawing . In the case of the Core ptesis , the Exit of Superposition is the bird's head . The position of the head therefore varies with the angle of the ES , that is to say , it varies according to the angle of the meeting point of the Flow A and the Flow B .
Each point on the middle axis is the Exit of Sup. (ES ≃ the center of the Superposition (passing through its Nucleus) , and the center of the Core .)

The Base of the Core is here , always located just under the meeting point of A and B (which make an ES) , this is where there is the Orgonome (here a bird) , moving itself in , and by , the Superposition which nourish/feeds the Core ptesis) .

The height of the scale is the distance between the starting point of A and the starting point of B .

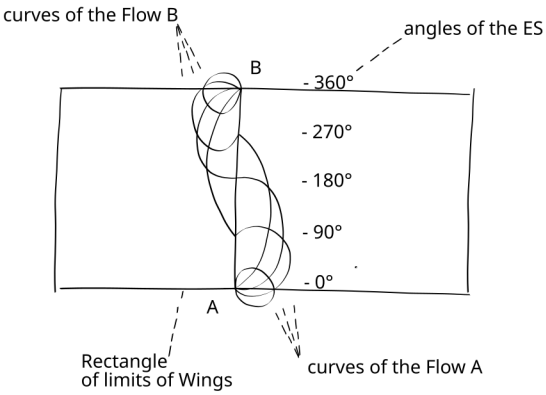
The Wings deploy/unfold themselves or ploy/fold themselves following the contraction of the A or B .
In the hypothesis 04 , the Wings, at the time of the Charge and of the Tension (CT (= Contraction)) , are extended upwards , (that is to say , the BW towards the Flow B) .
They are contained in a limit , fixed at the starting point of B . The Wings , with their BW , cannot go higher , and therefore are forced to descend by stooping themselves , flattening themselves , spreading themselves first horizontally , in width , then , because of the size of the BW which cannot exceed the limit B , approaching again between themselves , vertically , downwards , in the opposite direction between themselves .

In this drawing the distance between the starting point of A and the starting point of B is the same than the height of the Wings when B is in maximum Relaxation , and the A is in maximum Contraction . That is to say that the Wings are deployed/extended vertically . The size of their width , their wingspan , when the Wings are separated from each other at maximum , is therefore the same than the height doubled , and therefore also the double of the distance between the starting point of A and the starting point of B . The limits of the Wings are therefore here a rectangle , of which the length is equal to twice the height .

The only time when the Wings are ployed/folded is at the deactivation of the Core ptesis (Most of the time , by a return of the Flow A to the Core pelvis) . The Wings , without the Core ptesis , are the BW of pelvis C4 (chest) , which it , is then active .

In the hypothesis 04 , Core ptesis is the Core of the Flow B (because it is in the interior curve of it) . But it is in Contraction when the Flow B is in Expansion , and the Flow A is in Contraction . The Orgonome , the bird makes an effort , while at the same time the sky (the B in Expansion) cheerfully and in a Relaxed way offers it what it needs to fly away itself (to make the Exit of Sup. , and therefore allow the Discharge .

drawing scale of pulsation hypo. 04



(alternates from top to bottom ,
each point on the axis is the Exit of Sup.)

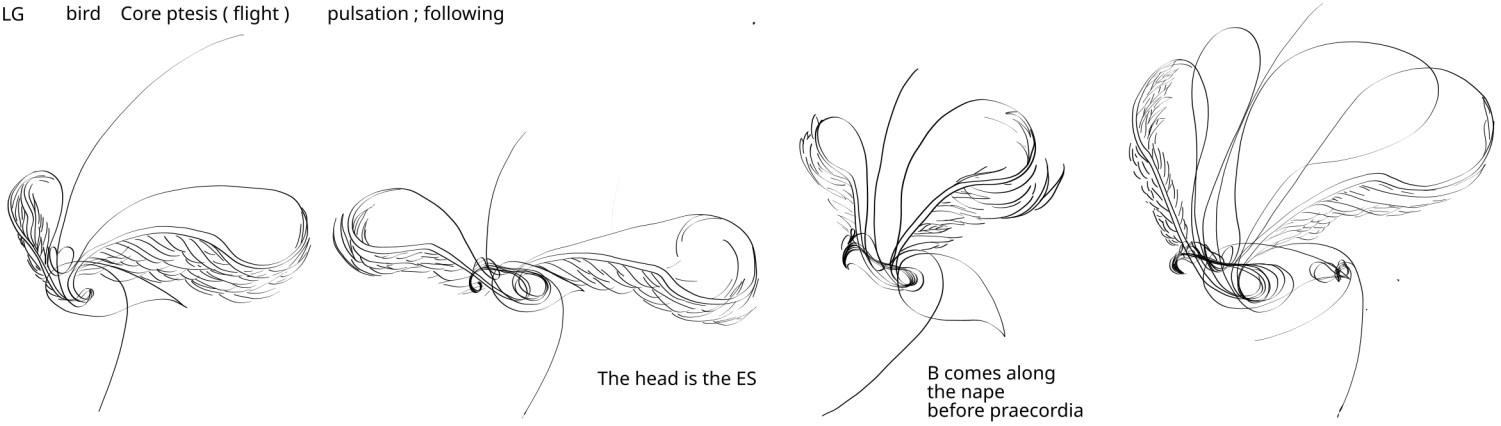
Angle of the ES ;

At 0° ; the Flow A of the Sup. is in Contraction . The Flow B of the Sup. is in Expansion . The Core ptesis is in Contraction . The Wings are deployed/Charged/Tensed vertically toward the Top . The bird's head is toward the Bottom . The Orgonome makes an effort .

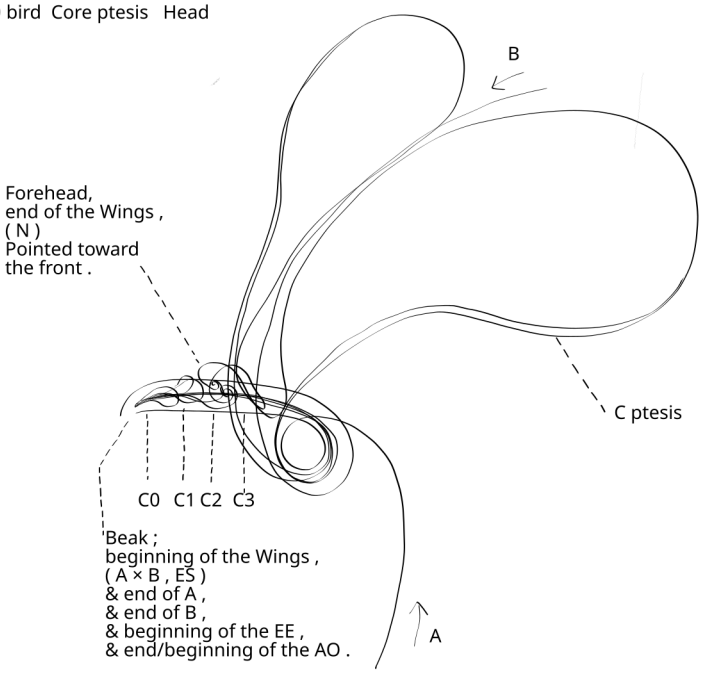
At 180° ; A and B face each other . (The ES must be inactive) .

At 360° ; The Flow A of the Sup. is in Expansion . The Flow B of the Sup. is in Contraction . The Core ptesis is in Relaxation . The Wings are deployed/Discharged/Relaxed vertically toward the Bottom . The bird's head is toward the Top . The Orgonome is resting itself .

LG bird Core ptesis (flight) pulsation ; following



LG AO bird Core ptesis Head



C0 ; Tongue

C1 ; Nose/nostrils

C2 ; Eyes

C3 ; Skull

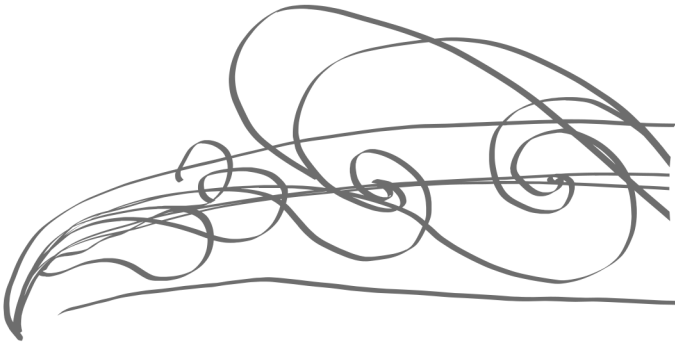
- Nape is where intersect/cross themselves the N,W1-W2 .

- C ptesis makes/forms all the head .

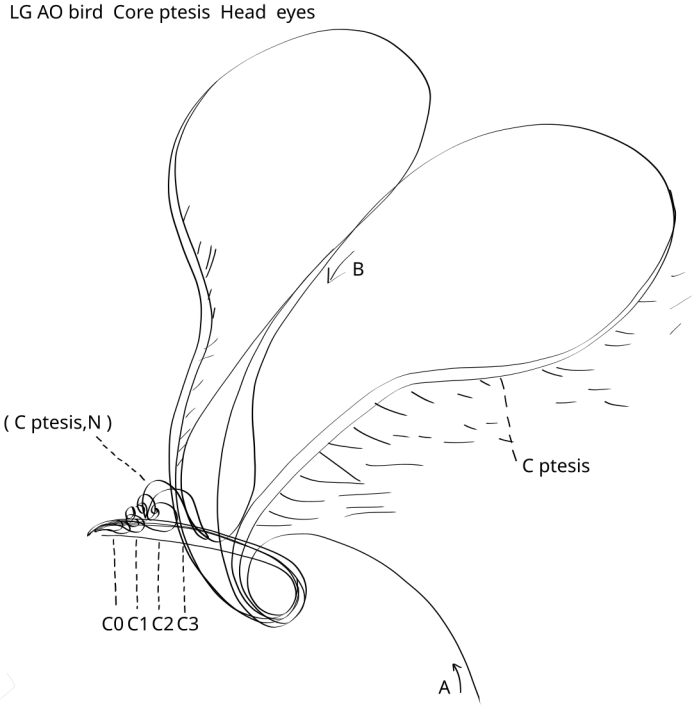
- Head is beginning/end of the AO .
A and B do not arrive directly at the head but first pass through the body (praecordia (AS)) .

- C0 , C1 , C2 , C3 are formed from (C ptesis,ES) .

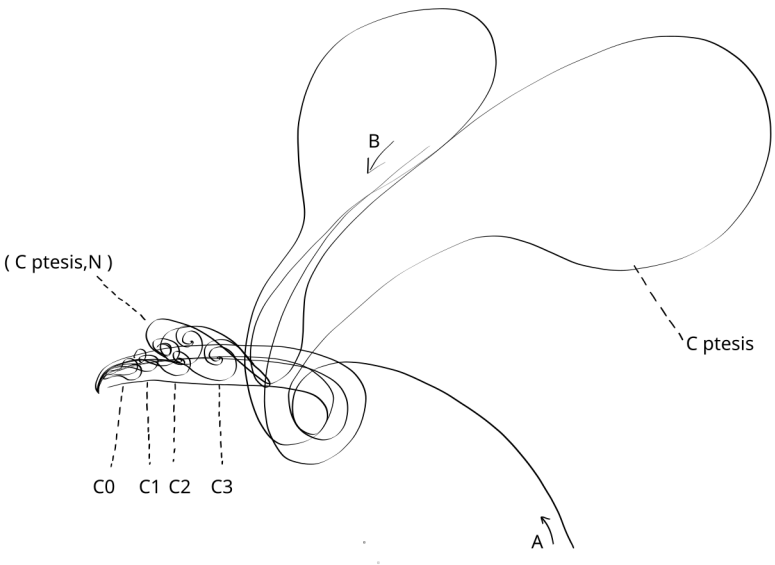
- A and B are going to make/form the beak .
(A is the lower part of the beak .
B is the upper part of the beak .)
B is stronger than A
(visible & logical) .



LG AO bird Core ptesis Head eyes



LG AO bird Core ptesis Head ears



Eyes ; the Bigs Whirls of the Core skull 2 of the Exit of Superposition of the Core ptesis , Superimpose themselves with the Wings of the Nucleus of the Core ptesis of an Anamole of an Orgonome .

AO, ((C ptesis,ES,C2,W1-W2,BW) × (C ptesis,N,W1-W2))

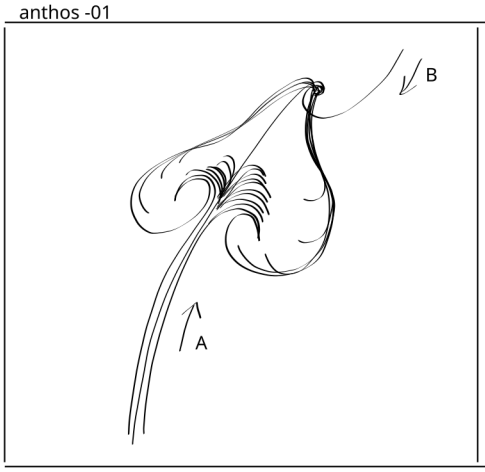
Ears ; the Bigs Whirls of the Core skull 3 of the Exit of Superposition of the Core ptesis , Superimpose themselves with the Wings of the Nucleus of the Core ptesis of an Anamole of an Orgonome .

AO, ((C ptesis,ES,C3,W1-W2,BW) × (C ptesis,N,W1-W2))

The N of C ptesis is therefore perceived by the ears , before being perceived by the eyes , because it first passes at the rear of the skull , before arriving at the forehead , then to the eyes . The large vibrations in the audio are captured 1st . Almost as if one of the functions of the ears was to calm the Flow of the N of C ptesis , to weaken it , before being able to see it , calmly (smaller vibrations of the light) .

LG δενδρον Core anthos (flower) , Core karpos (fruit) hypothesis -01

anthos -01

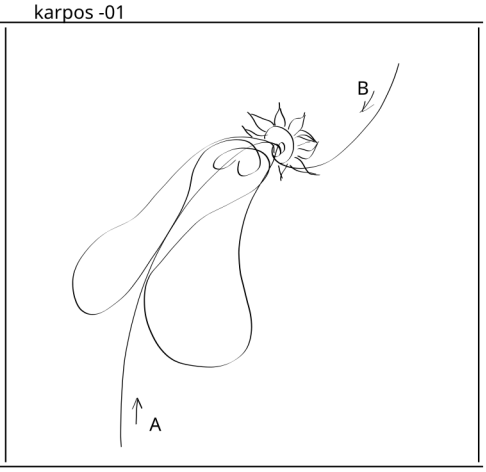


Core of the Flow A ,
The core is at the exterior ,
(extended in spring)
anthos = Flame of the core .

E.g. ; Dandelion , Papyrus , Lily , ...
“ waz-lili ” of the Aegean (~ Papyrus or ~ Lily)

(functions/works . maybe .)

karpos -01



Core of the Flow A ,
The core is at the interior ,
(extended in autumn)
karpos = Flame of the core .

E.g. ; Squash , Pears , Apple , ...

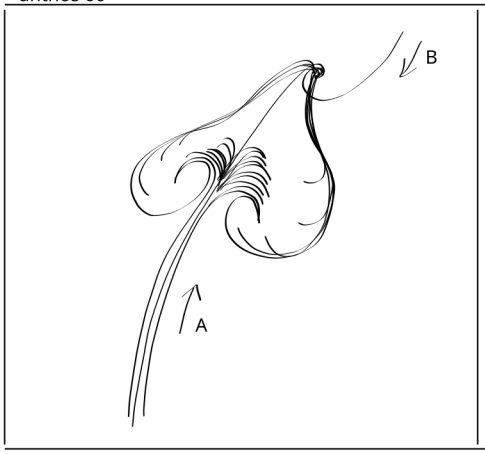
(does not functions/works .)

anthos -01 ;
The BW form flower petals , once or several times depending on the plant (for a dandelion , the Flame is not finished , but is indeed yellow) .
The petals curve themselves , following the Whirl of the BW , returning towards the stem if they are long .
The flower “ burns ” , consume itself , it is through it that pass first the Flow A , then the Sup. of A and B , then just the B .
This could functions/work .

karpos -01 ;
The Base of a fruit , the Base of a Core , (with its N (the seeds)) , is always in the direction of the stem/peduncle (Flow A) .
This is not the case here .
This does not functions/work .

LG δενδρον Core anthos (flower) , Core karpos (fruit) hypothesis 00

anthos 00

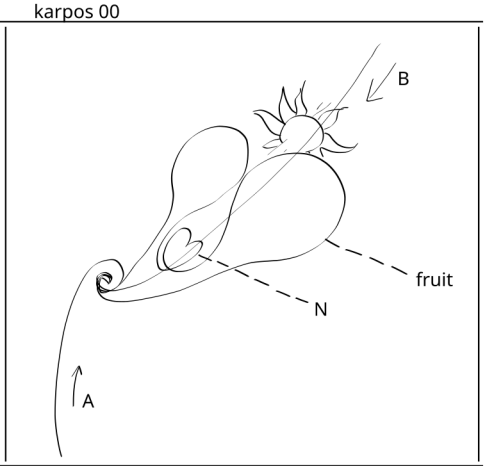


Core of the Flow A ,
The core is at the exterior ,
(extended in spring)
anthos = Flame of the core .

E.g. ; Dandelion , Papyrus , Lily , ...
“ waz-lili ” of the Aegean (~ Papyrus or ~ Lily)

(functions/works . maybe .)

karpos 00



Core of the Flow B ,
The core is at the interior ,
(extended in autumn)
karpos = whole Core .

E.g. ; Squash , Pears , Apple , ...

(cornuatus ; functions/works .)

anthos 00 ;
The BW form flower petals , once or several times depending on the plant (for a dandelion , the Flame is not finished , but is indeed yellow) .
The petals curve themselves , following the Whirl of the BW , returning towards the stem if they are long .
The flower “ burns ” , consume itself , it is through it that pass first the Flow A , then the Superposition of A and B , then just the B .
This could functions/works .

karpos 00 ;
Once the Superposition has passed through the flower , it continues the Sup. but under the flower , on the other side . Between it and the stem , there is the fruit , the Core of the Flow B , which grows slowly .
The passage of the Sup. from the Exterior to the Interior of the plant is a penetration . The A and B were coupled/mated well before ; in spring . It is done itslef during the plant's contraction , from summer to winter , the fruit grows in autumn , for a standard , for a single-cycle (Or it may pulse several times a year , or just in spring , right at the beginning of the year (e.g. ; cherry tree .) .) .
(insects and pollen follow the B and make the Sup. .)
(moon aids to the extension (~ a large mass that attire/atract/pulls/draw toward the top .) .)
(spring aids extension (~ water evaporates itself with proximity of the sun , ~ a large mass that attire/atract/pulls/draw toward the top .) .)
This functions/works .

LG δενδρον Core anthos (flower) , Core karpos (fruit) hypothesis 01

anthos 01

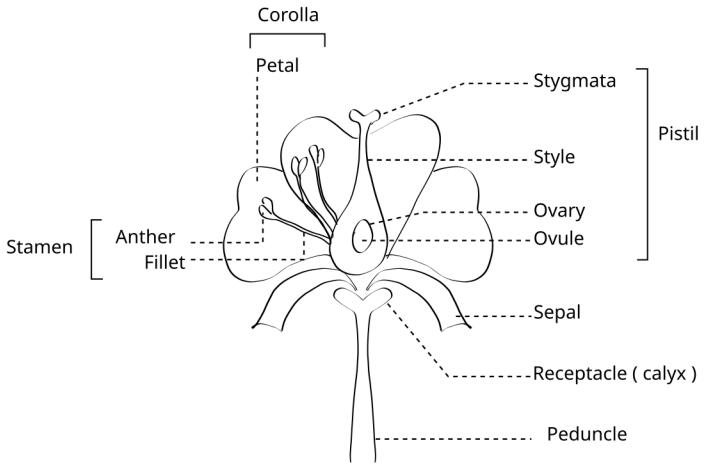
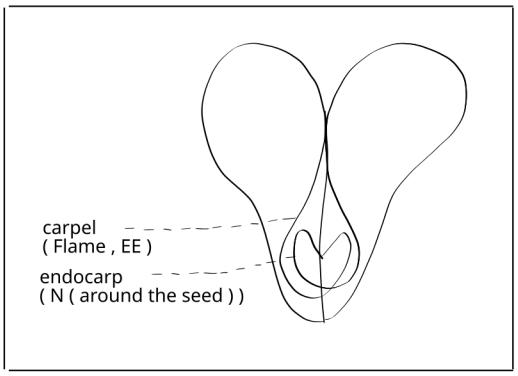
(spring aids extension (~ water evaporates itself with proximity of the sun , ~ a large mass that attire/atract/pulls/draw toward the top .) .)
This functions/works .

LG δενδρον Core anthos (flowers) ref voc e.g.



src ; Miscellanéea des fleurs, Anne-France Dautheville, ed. Buchet Chastel .

LG δενδρον Core karpos (GR. ; καρπος/ου (ὸ) ; fruit .) ref voc e.g.

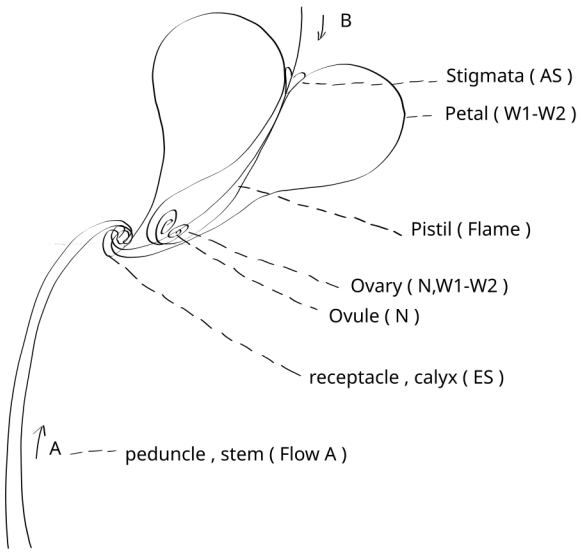


LG δενδρον Core anthos (flowers) ref voc e.g.
C1 , AS ; " stigmata " .

LG δενδρον Core anthos (flower) hypothesis

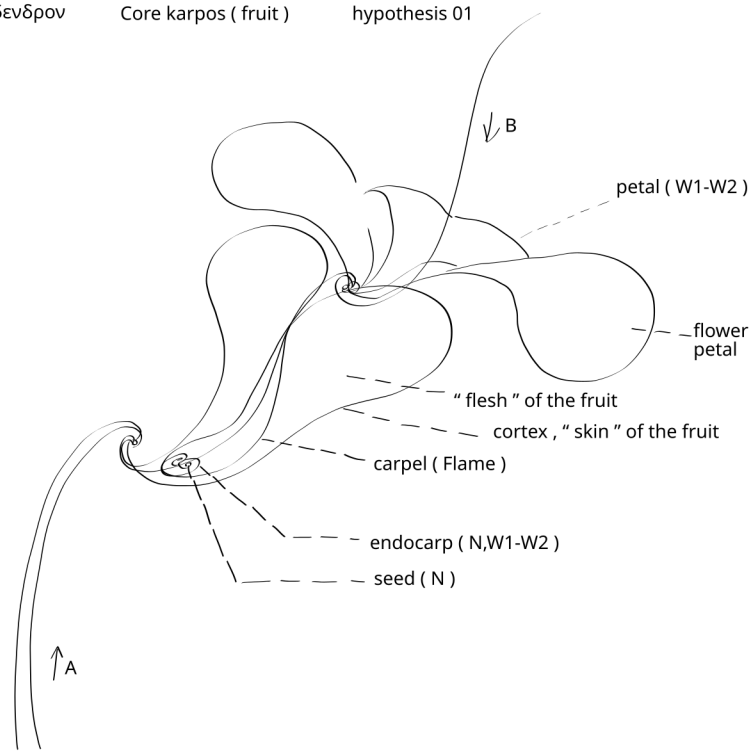
There are as many cores assembled in a flower , than there are petals (# and than stamens ?) .
Each petal are the two Wings of a Core . (# each stamen are the Flame of that Core ? (and the " anthers " are the Nucleus of that Flame ?) .) .
These Cores are around the main Core , the one whose Flame is the pistil , which will open the petals when charged (by spreading/deploying the Wings with their BW) , whose Base is on the peduncle (Stem , Receptacle , Calyx) which is the Flow A .

LG δενδρον Core anthos (flower) hypothesis 01



The flower forms itself , the petals open themselves . When charged in maximal , the Exit of the Superimposition of Flow A and B is done at the level of the " receptacle " / " calyx " .

LG δενδρον Core karpos (fruit) hypothesis 01



Between the flower , now discharged , and the stem , a fruit begins to grow (e.g. ; apple , pear , samaras , etc.) .

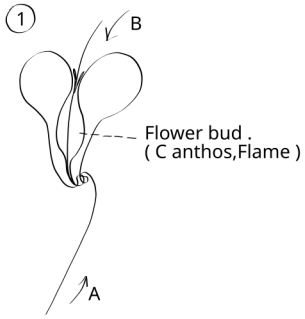
hypothesis probable ;

- The Superimposition of A and B then creates a new link/linkage/tie/nexus between A and B .
  (a new link/part of a krw/anamole)

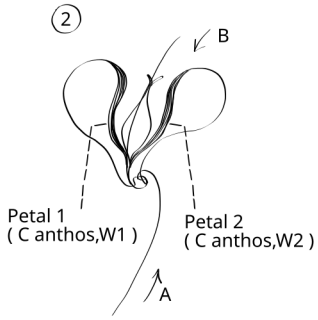
~ Flow B has advanced deeper into the flower .

miss ; stamen , sepals ,

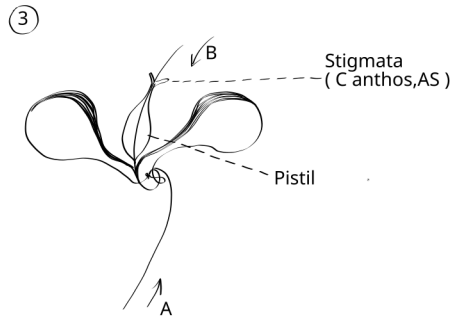
dj. believes that anthos (flower) 00 and anthos (flower) 01 are both valid depending the species .



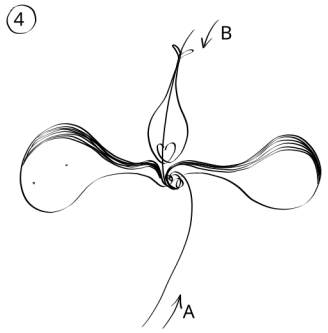
1 ; The flower bud (anthos) was formed by the growing Core .



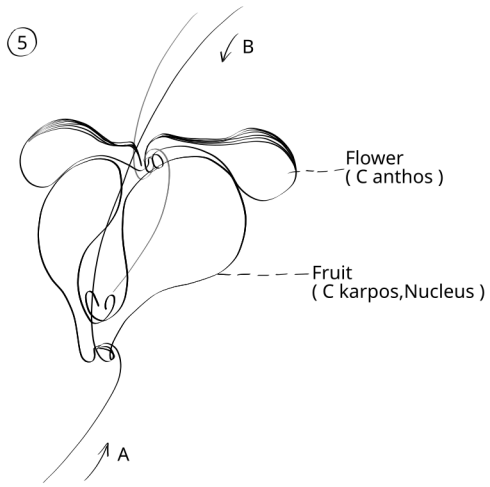
2 ; The Core begins the Charge , the Wings begin to spread apart , which also spreads apart the Top of the Flame , with the arrival of the Flow B (AS) , the flower petals (anthos) remain at the Edge Internal of the Wings (W1-W2,EI) and therefore at the Edge External of the Flame (Flame,EE) , and thus begin to “ open itself ” . The “ pistil ” , solid , less flexible than the petals , keeps the initial shape of the Flame , with the “ stigmata ” as Arrival of Sup. (AS) .



3 ; Continue .



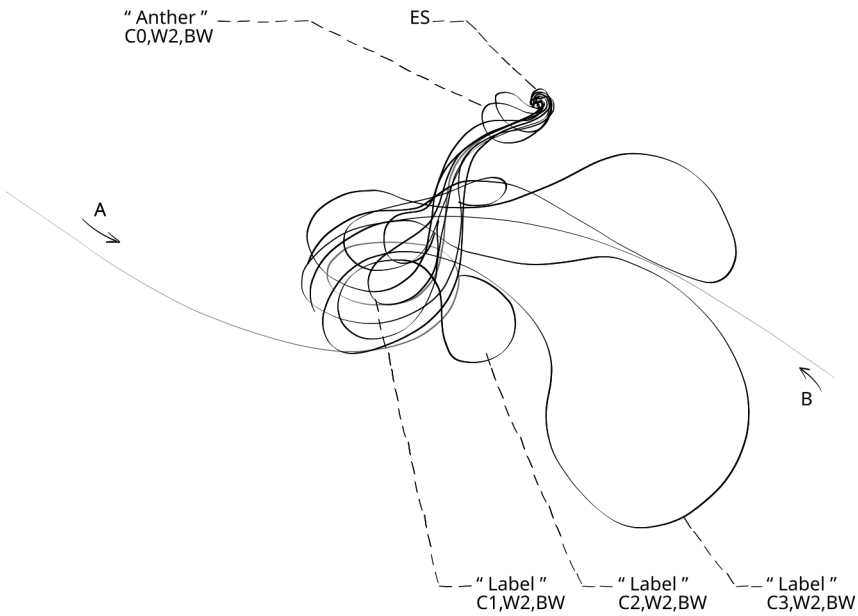
4 ; Expansion maximum , flower open .



5 ; Discharge , the Exit of Sup. makes itself , the Nucleus is “ fertilized ” , the fruit will begin to grow from it (the “ ovaries ”) .

It is missing ; The “ stamens ” . The “ sepals ” . The passage of the “ ovaries ” of the fruit , of the N , under the flower , through the Sup. A.B after the Discharge .

LG δενδρον Core anthos (flower) hypothesis 02 e.g. ; “orchid”/“caelogyne”/“phalustruc” ...



The Cores are in Continuity . The “ anther ” is the first Core (C0) , then a less visible one along the Flow A (C1) , then the “ small wings ” on the side of the “label”/petal are the BW of a third Core (C2) , then the largest part of the “label”/petal forms the two Wings of a fourth Core (C3) .

Exactly like the pelvis of the Orgonomes , such as , for example , a male H-S .

Here we can see Core anthos 0 , the “ anther ” , at the summit/peak of a curve inverted to the spiral curve of the Superposition of A and B .

Exactly like the phallus/clitoris of the Orgonomes , such as , for example , a penis of a male H-S .

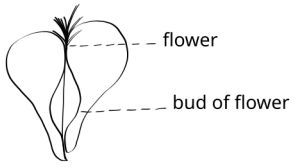
It is missing here the upper leaves of orchids/caelogines/phalotruc .. , it is possible that there is a second series of Cores in Continuity on the same flower , but in the direction opposite , that is to say , maybe a female Core anthos .

LG δενδρον Core anthos (flower) , Core karpos (fruit) hypothesis 01 problem placement of the N

In a fruit (e.g. ; an apple from an apple tree) , the N is located at the Base of the Flame , in the Interior of it .
In a fruit (e.g. ; the samaras of a maple tree) , the N is located in the EE and EI of the Wings , at the Base , as if External to the Flame .

LG δενδρον Core anthos (flower) hypothesis 01 problem top of the Flame e.g. ; dandelion

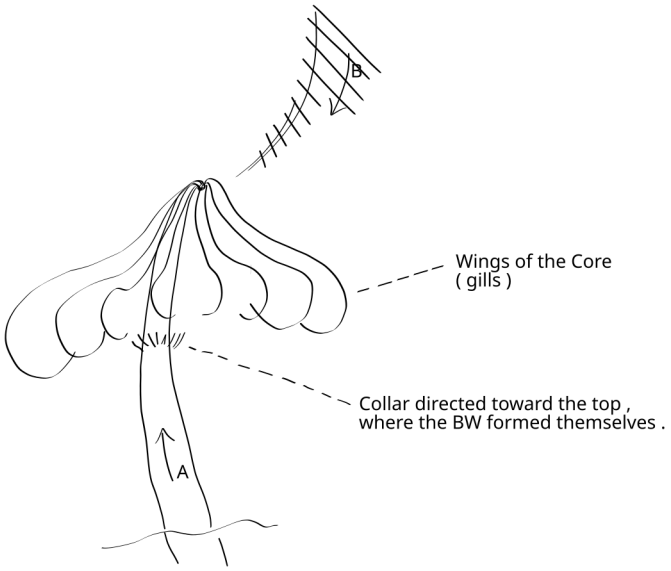
The flower emerges above the Flame , and maybe than its yellow “ petals ” do not necessarily have the shape of the Top of the BW .
Nearly as if there were a 2sd Core above the first Core anthos , that would make a new Flame .
Other anthos may be the same than here .



LG δενδρον Core karpos (fruit) hypothesis 01 e.g. ; squash , zucchini , pumpkin , cucurbits ...

A zucchini is a core with 2 visible Wings (like a pear) . (C_kr ; the word 'zucchini' in FR. ; ´ Courgette ´ , has the root ´ cor ´)
A pumpkin is a Core with many Wings (fewer Wings than the Core of a mushroom (e.g. ; lepiota))

LG δενδρον mushroom e.g. ; Parasol mushroom (~ lepiota)



This is the same as fruits/flowers at the flower stage . Except that the Core is visible .
A core slowly forms at the tip of a stem . In material (flexible and white) the e. rises from the ground , carried by some water , attired/attracted/pulled/drawed upwards (either by the sun , moon , or a large quantity of e. around) , there is little wind , otherwise it would be blown away . A stem rises slowly .

There is no Superposition that is made at the top of the stem with a Flow B coming from the exterior ... (if there are a Superposition that is made , the A curve itself more , the number of Wings is reduced, and they become mobile following the Arrival of the B ...) .

Then the Flow A begins to form a Core . The e. spreads out in all directions to form the Core with its many Wings (reaching a certain height , the e. meet/ encounters a density stronger than its own , so it is distributed/spread out in all directions , each Wing makes a gills/lamella) .

The more the e. of the Flow A Arrives , attired/attrackted/pulled/drawed upwards , the more the Core charges itself , thickens itself , lengthens itself , grows , and predominatingly begins to open (its two or multiple BW move apart one from each other) . This is the Charge and the Tension (of the CTDR) .

The “ mushroom cap ” (its Core) , Charged in maximum , tense , it should produce itself a Discharge and a Relaxation like any other Core , (such that a jellyfish) . Could this Discharge and this Relaxation occur during the night ? Or something else ? (in any case, it would be a motor force and it would be fast and strong) , but since there is no Superposition with a Flow B , the Discharge and the Relaxation do not seem to be done (otherwise the mushrooms would also be mobile , and would follow their Flow B) .

(This is exactly what happens during the explosion of “ hydrogen bomb ” , “ bomb A “ atomic bomb ” , “ nuclear bomb ” .)

LG δενδρον Core anthos (flower), Core karpos (fruit) LS vocabulary

flower ; (LAT. ; flos , oris ; flower . GR. ; ανθως , εως (το) ; (anthos) flower , what is growing . (λουλουδι ; flower . ροδον ; rose) . ALL. ;

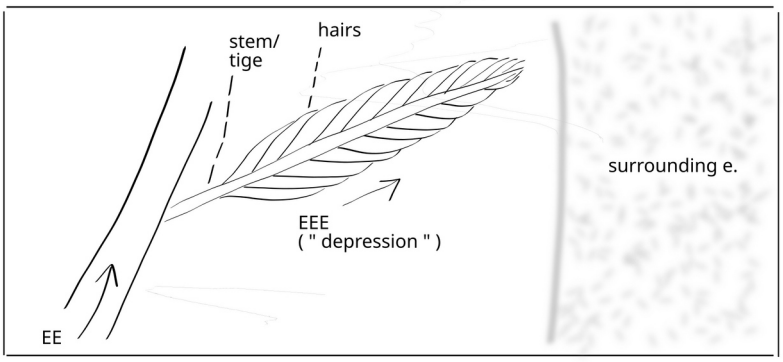
ss

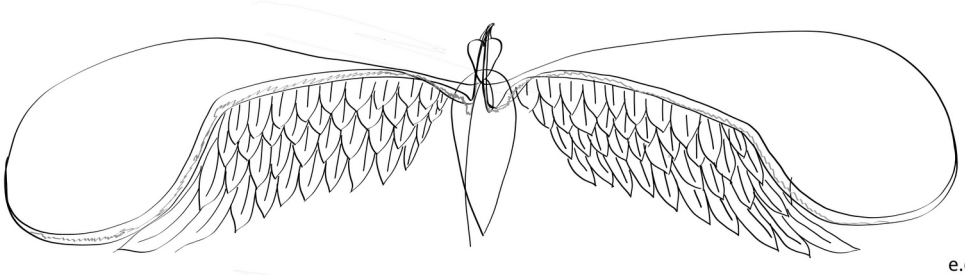


A feather , it is a white line that emerges/exit from the EE .
The e. has been attracted towards the External of the Edges External (EEE) , (maybe by the displacement of the Core ptesis relatively to the surrounding e .) .
The surrounding e. is more charged than the EE of the Core ptesis , and therefore attracts it , by reversed potential difference (i.e. ; the more charged e. attracts the less charged one) .
What then emerges/exit from the EE , it is some feathers , which will fill the space much less dense and charged between the EE and the surrounding e. (EEE) .

(These EEE are a ~ " depression " .)

From this white stem/shaft/tige , some small white hairs also grow . All these hairs are directed towards the e. equaly , towards the rear of the Orgonome .

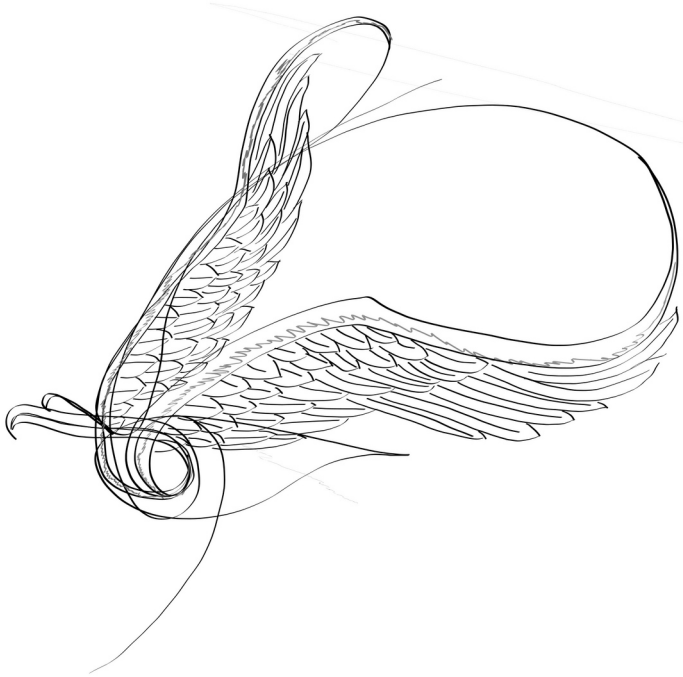
Often , the tips of the long feathers are black . This gives an indication about the surrounding e. .



Feathers perpendicular to the EE , until to the Anaclasis (Anaclasis ; the sharp angle between the EE and the BW) .

From the Anaclasis , the big/long and mobile feathers begin . They follow the BW in the same direction .
(These big/long feathers are not as long than the BW . This explains why they rarely recurve themselves towards the interior of the C ptesis , as it is done by the BW .)

e.g. ;
2 rows of 10 small feathers
2 rows of ~10 big/long feathers



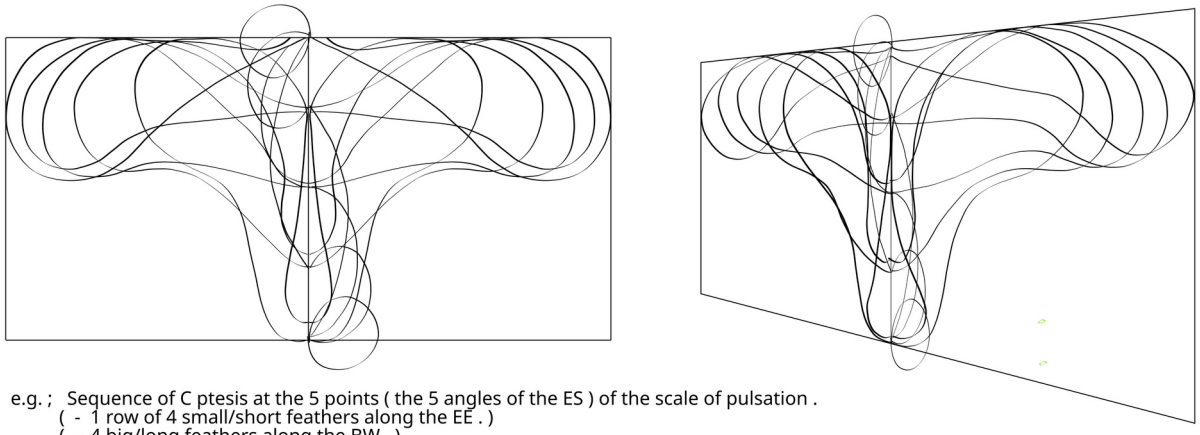
It is the BW that make/does the big/long feathers , by drawing those that the EE have made/done .
The more these big/long feathers goes away from the BW , the more they become small/shorter . They are a scale of the movement , of the quantity , of the force , of the direction of the BW (They form like some steps of a staircase , wher each one are a step/grade/degree .) .

These small/short and the big/long feathers (which are the EEE) , in flight , they can like pivoting from the plane of the Wing of the Core (this plane is curved and follows the EE , and BW .) (from which they were drawed (" have grown ") .) , according to the surrounding e. that is coming from the front (below/ above) of the Orgonome .

Therefore these big/long feathers do not begin at the Base of the EE , but begin to be drawed later , approximately at the Middle (where they are therefore the smallest/shortest on this scale/staircase) .

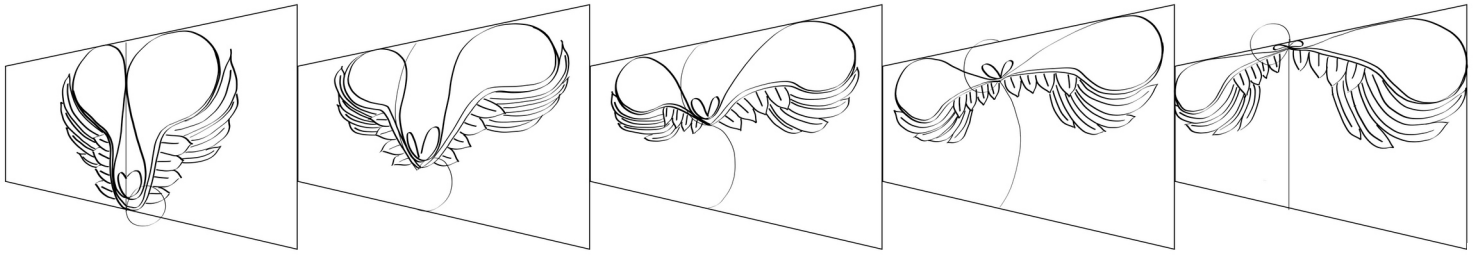
The BW , logically , have also some small/short feathers .

LG AO bird Core ptesis scale of pulsation hypothesis 04 following



scale of pulsation of C ptesis , View 3/4 front

e.g. ; Sequence of C ptesis at the 5 points (the 5 angles of the ES) of the scale of pulsation .
(- 1 row of 4 small/short feathers along the EE .)
(- 4 big/long feathers along the BW .)
(- With a flattening of the Wing of the Core .)



LG AO skull C4 , Nucleus e.g. ; H-S

Male ; the Nucleus of skull C4 does not cross itself under the lips , but go upward again , side by side , until the lower lip , at the middle .

Female ; the Wings of this kind of Nucleus cross themselves between the mouth and the chin and go upwrad again until the edge of the lips .

- This would explain their very large and beautiful smile .

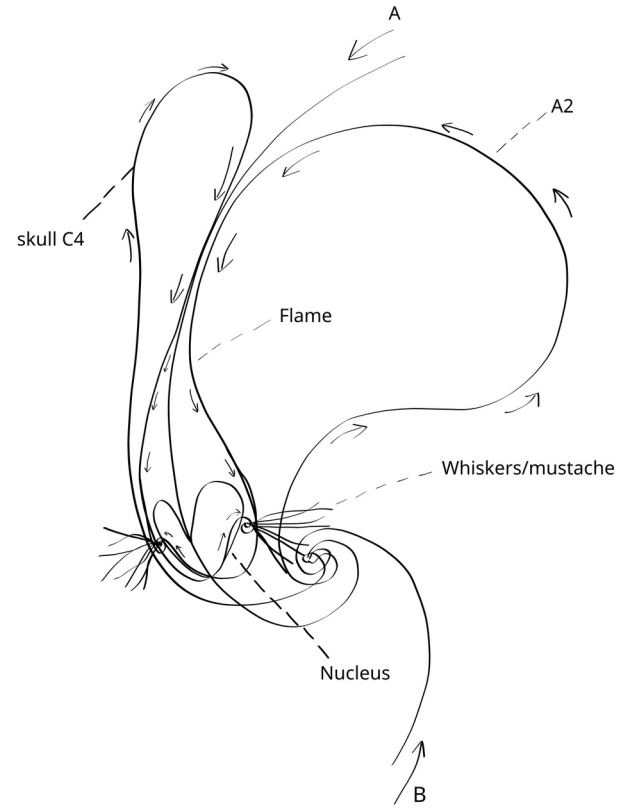
- If it is indeed a Nucleus , at the Base of the Flame , there is crossing only for/in the female , and this would participate to understand the procreation .

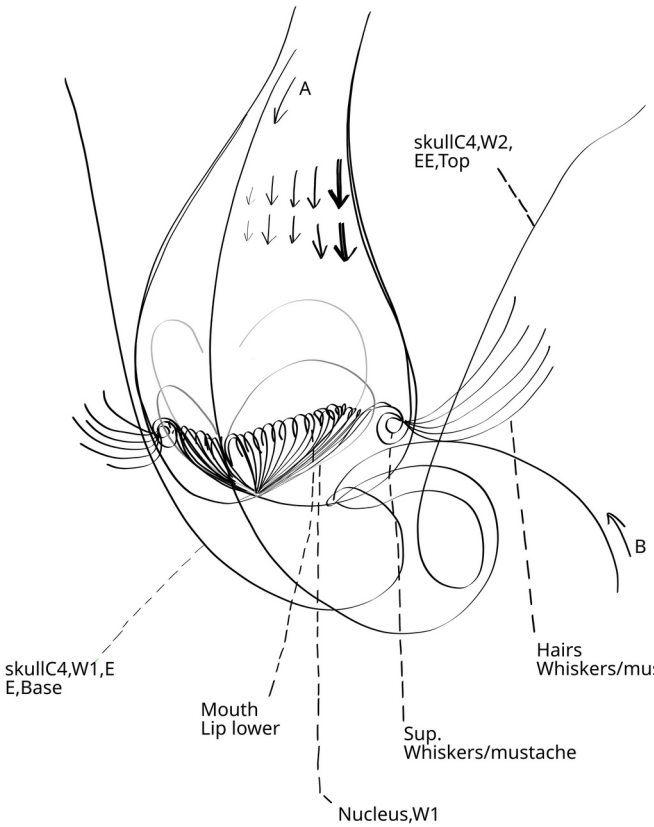
- This crossing could be explained by a thin/fine face .

- This crossing or non-crossing , depending the male or female gender , could explain that so many women confuse the right and the left , much to men's astonishment ...

- This Nucleus would be above the Core nostril below .

LG AO skull C4,Flame,Nucleus, whiskers/mustache & mouth,lip lower e.g. ; female





- For a Whiskers/mustache , the Wings of the Nucleus , as they rise up within the Flame , on the side of the Wing of the Core opposite to the Wing of the Core from which they come , Superpose themselves with the EE of the Flame of that other Wing .

The BE of the Flame descends , and encounters the Flow of the Nucleus which rushes towards it as it is ascending . This gives a Superposition exactly at this point of encounter .
The Exit of Superposition of this encounter is therefore a hair .
Since all the ES of the Sup. have their curve that is opposite than the curve of the Sup. (If this were not the case , the hair would descend , in the same direction than the Sup.) , the hair ascends .

- For the lower lip of the mouth is equaly the product of the encounter of this Flow of the Flame that descends , with the Nucleus that ascends (the Nucleus which is the continuation of the Flame of the opposite Wing) .
The greater quantity ot the e. of the Wings of the Nucleus has already been weakened by having rushed on the External Edges of the Flame of the opposite Wing (and thus having done the whiskers/mustache) . All the remaining e. is then pushed back towards the center of the Flame (towards the A of skull C4) , but since it continues to ascend/go upward , it always encounters , in front of it and against it , the e. of the Flame that descends/go downward . That one is stronger (necessarily , since it is the origin of the Nucleus , of the e. that ascend) and has no other choice that to recurve itself in doing a backflip , (maybe in doing also a Sup.) rather towards the front of the Orgonome ; this gives/forms the lower lip .
We can see on this lip , some stripes ; they are between these overflows (maybe between these Sup.) .

This Nucleus which does not form grains , is glogally a sharp blue , because very charged .

Thus , if skull C4 no longer receives some e. from the Flow A , there are then no more e. that ascend back the Wings in EE , then in BW , then which descend back into the Flame , and then , the e. which was already in the Nucleus , no longer encounters opposition , neither from the Flame , neither from the Flow A , and can ascend back/ rise up higher .
This gives/forms the opposite of a smile . The lower lip of the mouth rises back higher and seems to descend on the edges (it is closer to the shape of a Nucleus of a plant) , and the Orgonome " pouts/sulks " .

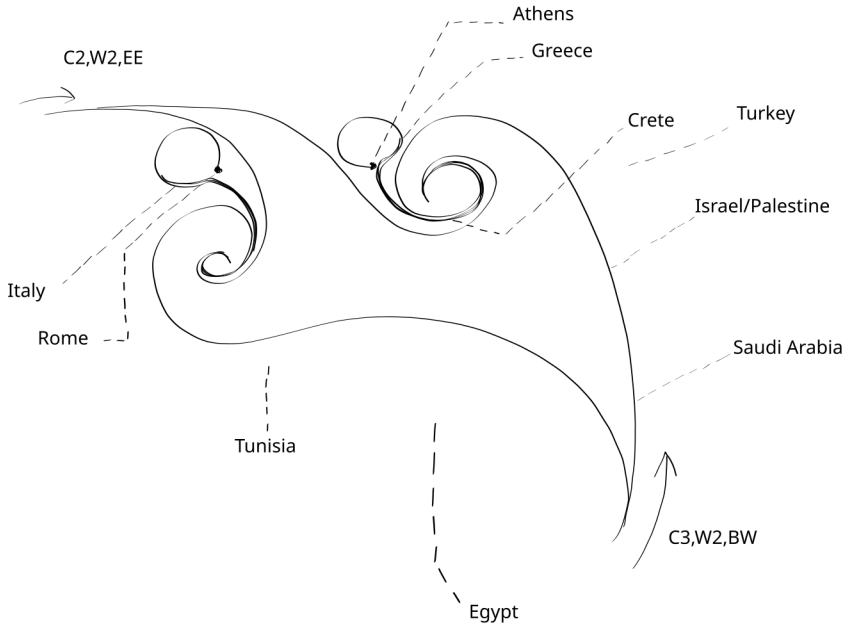
The smile of the lower lip of the mouth , it is the opposite .
A lot of the Flow A arrives in skull C4 and rushes on the Nucleus , pushing it strongly downwards , while it ascend back/rises up strongly against the Flame that descends .

And since there are two Wings , and therefore two EE of the Flame , and therefore two Wings of the Nucleus , each one of them are half of the force of the Flow A . And therefore the center of the lower lip , where the Flow A is passing , descends two times more , that the Edges of the lips ascend . This is the smile of the lower lip of the mouth of an Orgonome .

src;

CS tongue ;

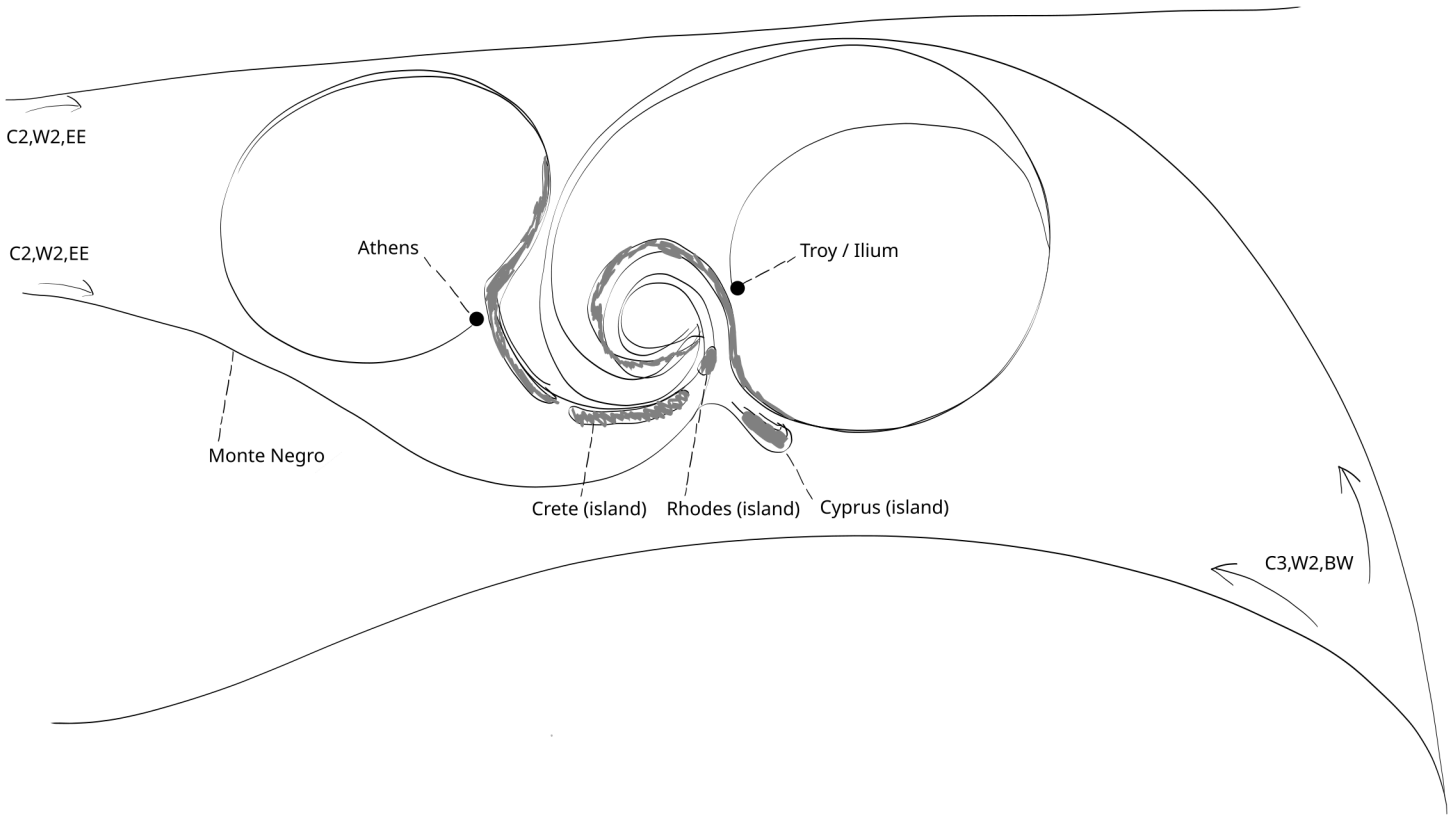
It can be seen on this drawing that the tongue (the ES of skull C4) is often curved itself downwards , just behind the lower lip .
It can also be seen its 4 dimensions ;
- the Flow A is , vertically , the underside/bottom of the tongue .
- the Flow B is , vertically , the upperside/top of the tongue .
- the Base of the Wing 1 and the Base of the Wing 2 , are , horizontally , the width of the tongue , at left and at right .



The difference between Italy ((C2,W2,EE)×(C3,W2,BW)) and Greece ((C3,W2,BW,Top)×(C2,W2,EE,Mid)) , is that for Italy , the Flow A get over/takes upperside on C3,W2,BW (that one is already weakened) (This Flow A is in full power) . Whereas for Greece , it is the Flow B that get over/takes upperside , because C2,W2,EE is weakened and C3,W2,BW is in full power . The Flow of C2,W2,EE must therefore reverse the direction of the Superposition (Whirling eastward , rather than westward) (it returns toward C2,W2,EE higher on this EE .)

For Greece , it is Wing 2 that forms the continent above the water . Wing 1 is below (the reverse of Italy) .

- A ; comes from C2,W2,EE .
- B ; comes from C3,W2,BW .
- EE,Bottom ; Crete .
- EE,Top & BW ; Greece .
- ES ; Cyprus ? All the islands ? Like Etna in ES of Italy (before that the ES formed Calabria) . These islands are volcanoes, several of them, although one is as powerful than Etna , probably at the island of Terra/Santorini , where the city of Akrotiri was destroyed , abandoned and preserved by an eruption (Next to Etna , there are other small islands with volcanoes ; it's the same in the Aegean Sea .) .
- BW,ES ; Athens (town) (exactly like Rome (town) in Italy) in Exit of Sup. of the Big Whirl , coming to trip , rush towards , touch the Anaclasis between the EE and the BW .
- Anaclasis ; Probably a very large volcano , like the " Campi Flegrei " and Vesuvius in Napoli (town) (like a bird's wing joint .) .
- AS ; Macedonia , Georgia , Sparta ... .



LSRL caries

EN. ; Caries ; rotten teeth , attacked , etc. (not beautiful ...)
FR. ; Carie ; rotten teeth , attacked , etc. (not beautiful ...)
GR. ; e.g. ; χαριεντα ; graceful , charming , amiable , etc. (beautiful)

= opposite
e.g. ; " sugar causes dental caries . " is a false and opposite sentence .
e.g. cornuatus ; " brushing teeth causes dental caries . "

LSRL fils (EN. ; son)

GR. ; φίλος υιός ; beloved son , friendship , etc. (των ανδρων φιλοι υιες ; dear sons .)
FR. ; the ´´ O ´´ is missing ! (from φιλος) and it give ´´ fils ´´ .

= was done to forget that the fils (EN. ; sons) are loved , and are literally born of love (φιλοτητι ; love/sexuality) .

LSRL game

GR. Ancient ; γαμον ; hymen , marriage , coupling (γαμεσται ; to marry) .
GR. Recent ; γαμος has been hijacked/repurposed into vulgar terms (equivalent to " screw " , " fuck " ...)
EN. ; γαμος has been hijacked/repurposed into " game " (~ a play) .
FR. ; monogame , polygame , endogame , exogame , gameboy ... .

= opposite = the game is not a game , it is the most serious thing there is . = some commercial establishments are being created everywhere , called " escape games " = escape game of sexuality ? of marriage ?

LSRL ministry

GR. ; μνηστηριν ; " pretender/claimant/wooer/suitors/courtier "
EN. ; ministry ; ~ servants of kings , of presidents , of peoples , of administrations , etc.
FR. ; ministère ; ~ servants of kings , of presidents , of peoples , of administrations , etc.

= for erasing that they are , before being servants of kings , of presidents , of peoples , of administrations , the servants who court/woo/pretend to the well-placed ladies (e.g. ; to Penelope) .

LSRL ment

GR. ; μενον , μενος ; force , etc. , very used at the end of compound words . (Comes from μεν ; ~ spirit ... , μαντις ; ~ divination ... , μενοινα ; ~ desire , project ... etc. (comes from ´man , mana ´ in Sanskrit ; ~ to think)) .
EN. ; gave ´´ ment ´´ at the end of compound words .
FR. ; gave ´´ ment ´´ at the end of compound words .

= nothing = completely ignored by spiritless people .

EN. ; ´mendacious´ , ´mendacity´ ; to lie , to say untrue things , for cunning , for deceit , to tell tall tales , fibs , etc. .
FR . ; ´ ment ´ , ´ mentir ´ , ´ mensonge ´ ; to lie , to say untrue things , for cunning , for deceit , to tell tall tales , fibs , etc. .

= opposite
= Wheras μενος , the mind/spirit , the force/strength , is found only by the truth , solely by the truth , and absolutely always by the truth , ' ment ' , especially in FR. , means the opposite , cunning , deceit , telling tall tales , fibs = telling to a ´ menteur ´ , ´ menteuse ´ (a liar) that he or she ´ ment ´ (is lying) , is to congratulate him or her on the virtue of the truth , of the mind/spirit and of the force/strength . = impossible situation = gangs of liars everywhere all the time .
e.g. cornuatus ; " Go die , you filthy beast ! "

(Other words for the mind/spirit , the truth , the force/strength ... (noos , phrèse , psyche , etc.) ;
νόος ; mind/spirit , thoughts , ideas ... (Bible ; " Noah " ...) . φρεσὶ ; mind/spirit , thoughts , soul ... (FR. ; Schizo-phrenic , ... ; broken soul , severed mind/spirit , (at the place of the diaphragmatique organ) etc.) , " ενι φρεσί τοὺτο νόημα " ; ~ " in the mind/spirit this idea " ; " ψυχὰς παρθεμενοι " ; ~ " exposing/risking one's life " .)

LSRL clito

GR. ; χλυτὸν ; ~ noble , famou s, glorious , of whom one hears . (e.g. ; κλυταιμνηστρη ; Clytemnestra , clitai - mnesteira = Famous seeking in marriage = noble/glorious woman desiring (Agamemnon's ex-wife , coupled to Aegisthus and ruling Mycenae (~department in Argos (~region) in Greece (~country)) after killing Agamemnon , etc.) .)
EN. ; Clitoris ; Erectile organ slightly over twelve centimeters long , in the pelvis of the female .
FR. ; Clitoris ; Erectile organ slightly over twelve centimeters long , in the pelvis of the female .

= opposite = Nothing is more hidden and unknown than the clitoris .

GR. ; περικλυτος ; " famous " , celebrated , of whom one hears , well-known .

FR. ; Pericliter ; fall , pejorative .
= opposite = to say that someone has risen in the social structure , is done by saying that he/she has fallen , that he/she has wallowed = " tu vas péricliter " ("you will fall") = fear and discouragement of fame .

LSRL mor

μοιρε = morality Moralis . etc. often associated with the fate . Often translated as " Fate " (of death) .

μοιραν ; ~ " what is appropriate , the right/suitable/conveniant/fitting thing "

the death , mortal

LAT. ; More ; the will of another , what is appropriate , the right/suitable/conveniant/fitting thing , morals , ~ decency , sexual customs ... .

« who speaks of death has power » (dj.)
(In Homer , it is the patriarchy .)

« who has power speaks »

amor (love) = a - moire χαίρων ενι τυμω

amor (love) ; α - μοιρε

Amor ; α - μοιρε ; τυμω ενι χαίρων

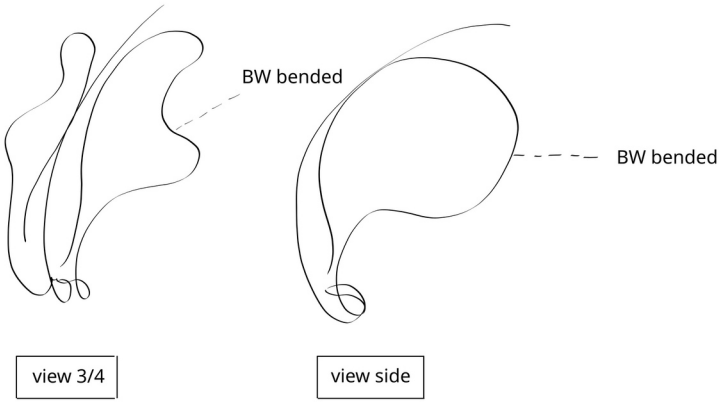
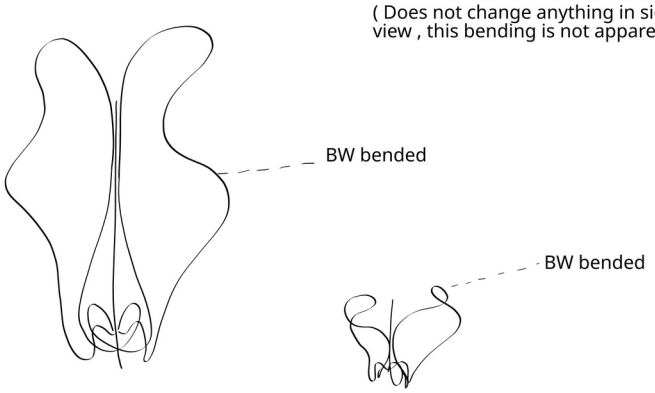
A Core BW bended



view 3/4 view side

(Does not change anything in side view , this bending is not apparent .)

A BW goes not everytime doing the Big Whirl toward the Exterior , then coming back toward the Interior for doing the Flame ; sometime (frequentely) , between thes two steps , there is an other ; a bending toward the Interior .
This bending toward the Interor , goes back toward the Exterior again , then finaly comes back to the center for doing the Flame .
This bending is due to the curve of the Flow A making the Core .
This one is very curved , and the shape of the Core follow it , keeping its proportion relativelly to it (and not relatively to any cardinal point , horizontal perspectives , " euclydian " geometry or other system of space .)



view face view top

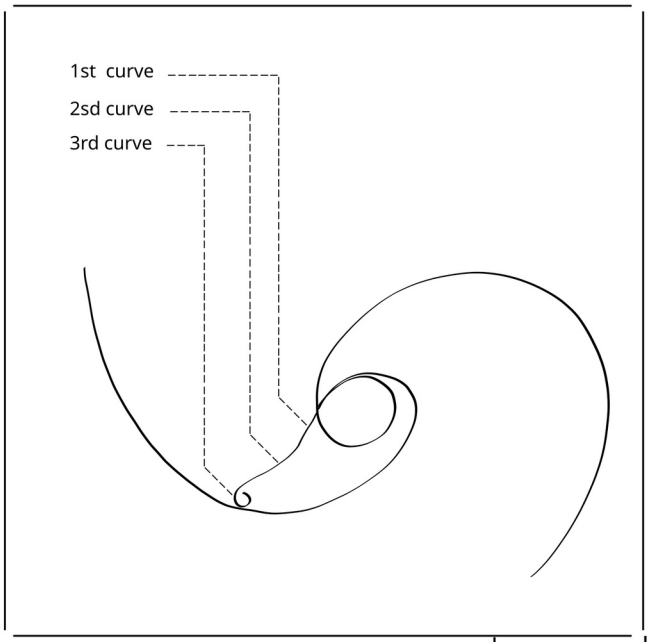
E.G. ; a skull of a animal , like the H-S (AO,HS,skull C4,BW bended) , which makes almost half of the " ball " of the skull , and whose BW meet themselves to begin the Flame at the Top of the forehead (point of the hair) . Or else , between the " temples " which are the bended BW of the C3 skull , the Core whose BW surround the eyes (AO,HS,skull C3,BW bended) .

A Core ES

The Exit of Sup. has three curves . They starts with the same curve than the curve of the Whirl of the Superposition , then , let's say halfway through , this curve changes of direction ; it ´´ erects ´´ . Then , towards the end of its course , when this Flow goes itself to create another Superposition , the curve changes direction again , it returns in the direction of the Whirl of the Superposition from which it exited .
This is like that for all Exits of Sup. .
They are more or less long and more or less strong .
These ES , the more active they are , the more it circulate , and the stronger they are .
The more they are active , circulating and strong , and the more pronounced and significant the curve of the erection and of the final recurve are .
These ES , The less active they are , the less they circulate , and the weaker they are .
The less they are active , circulating and strong , the less pronounced and significant the curve of the erection and of the final recurve are .

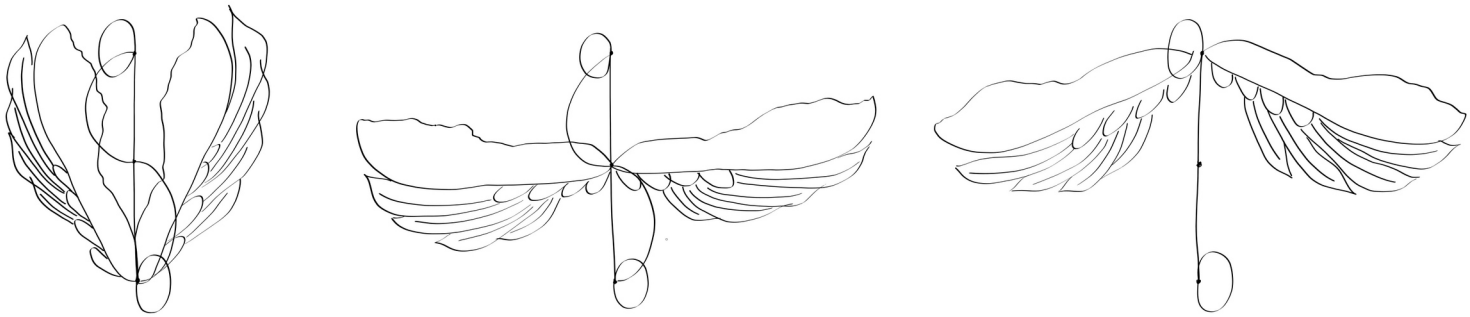
The average between the two determines the most frequent curvature .

For example , a leg has a bone that is this Flow of the ES , Exited from the previous Superposition . The average state , its most frequent state , forms a bone , with these three curves . These curves are more or less pronounced . But when the ES is done , there is ´´ contraction ´´ of the muscles of the leg ; but firstly , there is the ´´ contraction ´´ of this " central " Flow of the ES , which , starting from its average curvature of the bone , marks the erection and the final recurvature . Thus , a " biceps " is the ES of the precedant Sup. (and is not a " muscle " like the others , because the others are the Wings of the Core formed by this Flow , this ES (which is therefore the Flow A for this Core .) .) .

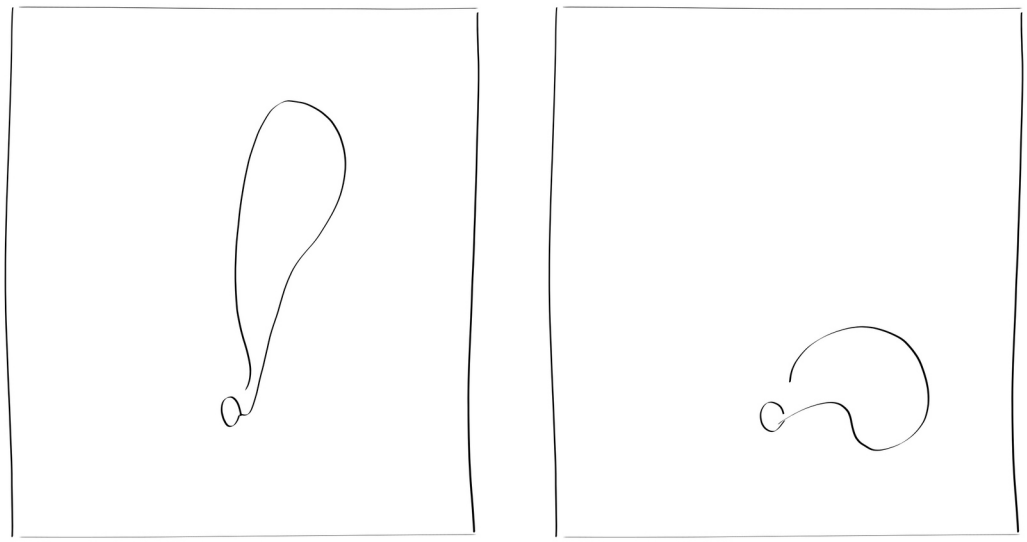


drawing ES
View side

LG AO bird C ptesis scale puls hypo 04 following



That's OK . But during a Discharge , the e. contained in the Wings is Discharged through the Nucleus . And therefore , what was accumulated in the BW . This has for effect than the BW change of shape . They ´´ deflate ´´ themselves in height/length , flatten , become wider horizontally , until there is no more e. in the BW . The Anaclase then forms a very marked/pronounced angle , its starting line is no longer in line with the EE , and the Wing of the bird forms a double curve , with angles , until reach the Relaxation (" flabby " ...) , and the long feathers are then directed toward the bottom of the bird , they no longer follow the BW toward the top of the bird but follow the BW toward the bottom of the bird .



Very Charged

Little Charged

In very Charged , this " bag " elongates itself along the axis , and the Anaclase is less marked/pronounced .

In little Charged , the BW still returns to the axis of the Arrival Flow (A or B) (via the Flame) .

This is exactly the wing-folding movement of the C ptesis of a bird , when this bird folds its wings , in stopping to fly , when the landing was done .
(The BW increases in width , while the height of the Wing of the Core decreases .)

LG AO H-S Flow male/female male/female , chest , pelvis , CS , epi

The Flow male and the Flow female are both present in the male , and in the females ; together .
But in female , the Flow female predominates , is there more often , and stronger . It is bigger than the Flow male , and particularly/especially , it curves itself much more . It arrives from the front , at the praecordia/atrium/arrival etc. , just below the Base of the C ptesis (which forms the head and shoulders etc.) , descends along the back into the chest , along the vertebral column , then Arrive at the female pelvis Core 2 (illium) , between its 2 BW , then continues through the Flame , and goes to do the rest etc. . The clitoris , just before the ES , is very developed . But the Flow male of the female is straighter , more taut , weaker , and less often active . It Arrives at the same place in the chest , but comes from behind , along the rear of the skull , the nape , the spine , under the C ptesis , in praecordia/Arrival etc. , and descends by the front of the body to the male pelvis C2 (Ischium) (which is not much developed) , to its BW , between , then continues until the pubic symphysis . The entire body (chest/trunk) thus presents a curve of the vertebral column in the back and a straight line in the front , taut . Female pelvis C3 (chest) is indeed the Core which forms the breasts/udders/pies , these are the BW of this Core , and the nipples are indeed the ES of these BW . The Anaclase of the Wing of this Core is the underside of the breasts , and even a breast that appears drooping is in fact probably a well-formed BW (it was necessary to drawn the whole thing to understand it) . The complete opposite of the male . Its Flow male is ample in the front and bulges the chest/torso forward , while its Flow female is straight and weak , making its back straight and rigid . Since its Flow is straight , its female pelvis C2 (illium) is also straight (it was necessary to drawn the whole thing to understand it) . The wings of this Core , have their BW which form a marked/pronounced bending .

The whole is a monumental Consouplation .

LG AO Flow e.g. H-S

3 Flows (to manage)
- Flow of C ptesis (head/arms)
- Flow male
- Flow female

These 3 are all some Flow A .
There is still their Flow B (to manage) (with what they Sup. themselves .)
These are general Flows , which feed all the Cores of the body (their Flow A , etc.)
Flow C ptesis is the same for the male and for the female .
Flow male and Flow female differ for the male and for the female (in strength etc.) , but they always come from the same direction (from the front for the Flow female and from the rear for the Flow male) (H-S has both at the same time , otherwise , the Cores corresponding to the other sex would not have been able to grow .)
The male has two arrivals , one above the other in the back , parallel and of comparable strength .

LG epi dj. lower lip pelv

first human to know that we have a lower lip in front of the penis . (~ exactly like the skull C4,Nucleus,lip lower , except that the tongue here is the penis . It was no coincidence that the gesture of " sticking out one's tongue " is classified as extremely vulgar , indecent , forbidden , etc.) .

LG skull e.g. H-S " neck pillars "

The " neck pillars " , on either side , which start from the solar plexus and rise up on the side of the neck to the skull just behind the ears , are possibly the Wings of the Nucleus of our Core ptesis . That is to say , in the same way that the head of a bird is formed , by the ES of its C ptesis which pushes the Nucleus toward the front . The AS of the C chest would be , in the H-S , the place of the crossing of the 2 Wings of this Nucleus of these Wings of this Core .

LG AO H-S C ptesis shoulders, arms, neck, head, nose ...

The Core ptesis exists in the H-S .
It is on this it that the forelimbs developed themselves .

Base ; The Base is under the head , under the neck , in the chest .

A ; The Flow A comes from behind/above , through the neck or beside it, on the dorsal spine .

B ; The Flow B arrives from the front/below.

AS ; The Arrival of Superposition (Arrival/Atrium/Entrance ..) is the spine at the bottom of the neck in the back . (the " dorsal spine ")

EE ; The Edges External are the stalks that extend from the neck to the shoulders (on the front of the chest) (the " clavicles ") .

EEE ; The Edges External External are the big plates of the shoulder in the back (vertical) . Following the BW , this creates a scale decreasing from the BW towards the Base . (the " shoulder blades ") .

Anaclase ; The Anaclase is the shoulder . (Hard , thick , like all Anaclases , with a marked/pronounced angle , like all Anaclases .) (the " Acromion ") .

BW ; The Big Whirls , begin at the shoulders , and the arms (forelegs) follow them . If this Core is little Charged , these are big BW , whose Whirl descends very low in the back. If this Core is very Charged , the EE elongates themselves , the BW lengthen in the direction of the EE and move away , the Anaclase is less marked/ pronounced at the shoulders (manual labor , etc.) . If this Core is very very Charged , it begins an automatic pulsation , (it is then possible , even for a H-S , to understand/feel what understand/feel all the birds , many insects , etc.) .

Flame ; The Flame is towards the rear . Its EE are not very sensitive (only warm , like all Flames) , its base is in front of the chest and encompasses the neck . The Top of the Flame is the dorsal spine . The entire Flame forms the " hole " of the neck on the top of the chest/torso (male pelvis C3) of the Orgonome .

ES ; The ES forms the neck and the head at the end of the neck . The end of the ES is located at the level of the " foramen magnum " , in the skull . (The end of this ES is a new Superposition (extremely important) that forms the beginning of the vertebral column . (This one is made up of Cores that originate here , 23 or 24 in the H-S , whose Wings and their BW form the ribs)) . (The curve of the neck (the second curve of the ES of C ptesis) is inverse to the curve of the the Sup. A×B , like all the Exit of Sup.) (The curve of the end of the ES comes back forward , like all the curves at the end of ES) .) (The Flow B of this Superposition at the end of ES forms many of the Cores of the head) . This new Superposition (the true Base of the whole head) , from where a lot of other Core are formed (all are starting here (and the last one finish at the end of the vertebral column) , partly inside the head (6 Core inside the skull ("brain" etc.) , and 23 or 24 along the vertebral column ("ribs" and vertebrae) , all from this Sup. , and all in Continuation between themselves (the " atlas " under the skull is not a separation .) . (with the exception of the Sup. of the pelvis , it would be sufficient to say that this new Sup. at the " foramen magnum " would be the most important Superposition of an Orgonome , but to produce it , it is firstly necessary to produce the ES of the C ptesis . And therefore , the Sup. that makes the C ptesis is even more important .

Nucleus ; The nucleus forms the perimeter of the neck and extend to the end of the ES , to the end of the vertebral column . Its two Wings cross themselves on the front of the chest, above the praecordia/diaphragm etc. , and above the EE of this Core ptesis , and within the Flame (like all Nucleus) . The EE of the Wings of this Nucleus start from this crossing and ascend up to the skull , behind the ears (they are hard and sensitive during head movements , during effort, when the C ptesis is active (and they possibly make the artery " carotid " which goes exactly at the same point that the new Sup. of the ES of this Core , at the end of its 3rd curve) . (like bird Core ptesis, Nucleus, skull , and others Orgonomes) .

epi dj. ; All this zone is finally understandable !

Crane C4 has its own Flame , different and bigger than the Flame of skull C3 (whose BW form the periphery of the eyes) .
Crane C4 is formed by a different Superposition than skull C3 .

Base ; Its Base and its Exit of Superposition are not at the mouth , but higher, just above and slightly behind the nose (" thalamus " , " fornix " , at the level of the " foramen magnum " .) . The nose is the ES .

AS ; The Arrival of Sup. is the top of the forehead, at the point of the hair (" hairline ") .

BW ; Its BW are along the hair up to the point of the hair at the top of the forehead (which constitute everything that is " frontal " , " frontal lobe " , etc. of the brain .) . There , the Flame begins and goes slightly into the skull . The BW follow the Flame internally . The EE Top of the Flame are the two very pronounced lines that descend and starts from the bottom of the forehead , run along the nose between the eyes , and move aside sharply towards the cheeks , this Bottom of this Flame is then hidden (in the skull , like its Top) .
(The BW of skull C2 (big smile/cheekbones) come to the EE of skull C4 .)
(The EE and BW of skull C3 (whose BW form the periphery of the eyes) come to the Flame of skull C3 , and are over the BW of skull C4 .)

Nucleus ; Its Nucleus is the two holes behind the nose (" sphenoíd sinus ") .

ES ; Its Exit of Superposition forms the nose . (This one has the three curves of all the ES . The first in the same direction than the Sup. , the second one in erection which changes of direction (here ; downwards and towards the front of the Orgonome) , the third of final recurvature in the same direction than the Sup. (here ; the tip of the nose , where is formed a new Sup. which then forms the Core nostril .) .) . This ES pushes forward from the Core the two Wings of its Nucleus (like all Exits of Superposition .) . Thus , the EE of these two Wings of Nucleus , are the same ones that have made the two holes behind the nose , but , pushed forward , descending , run along the nose , and their BW form the small ball at the very tip of the nose .

The general Core of the skull is therefore no longer skull C4 , but skull C5 . (The one that would be in Continuation of C4 skull , the one whose BW extend to the back of the skull , the one that forms the bigger part of the " brain ") (This therefore would shifts the jaw in « C6 skull »)

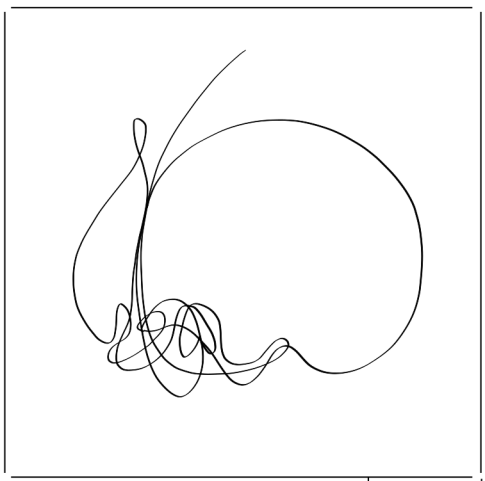
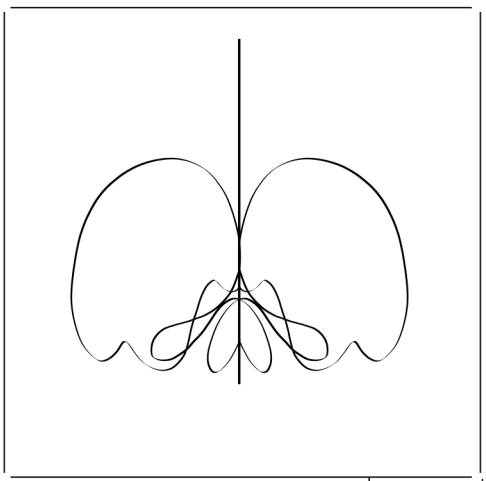
form the nose .)

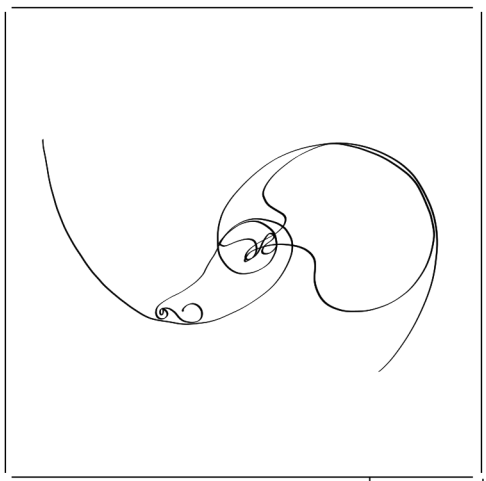


View 3/4



View face

The end of the Whirl of the Superposition is above and behind the nose . Viewed from the front , it also appears to be above the Flame ; this is not the case , it is behind the Top of the Flame and the AS . The Flame is clearly visible in view under .

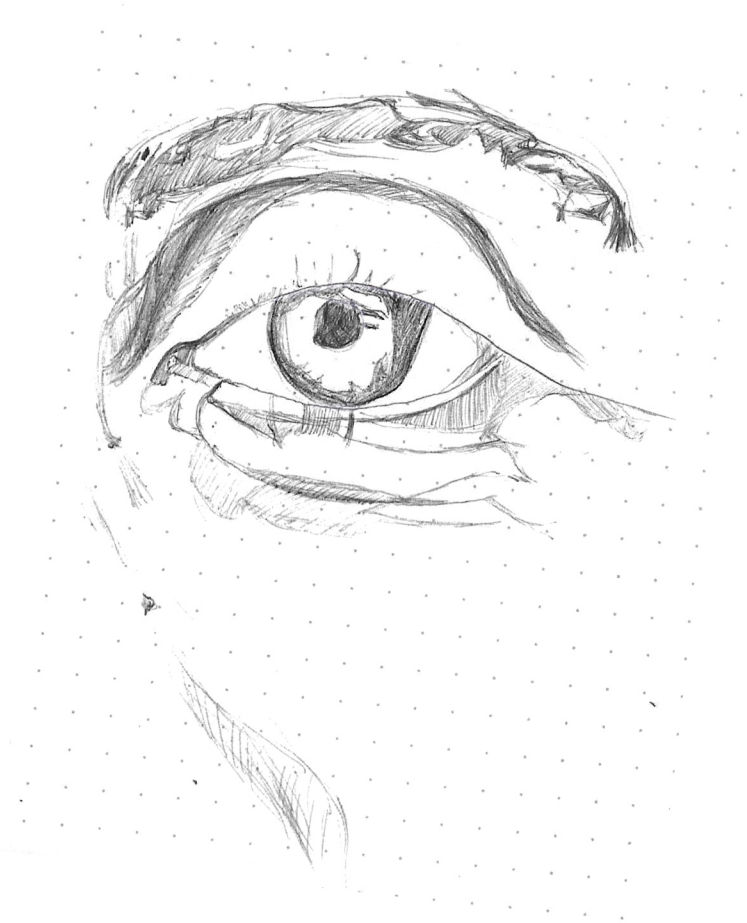


View side

With the ES ; the nose , and the Core nostril at the end of the ES .
The end of the ES rests on the curve of the Flow B .

LG AO H-S eye

~ There is a plate that comes from behind the eye , resting on the brow bone .
We can see it very pink on the lower eyelid .
Light



LG AO H-S skull Core 5 eyes/parietal

A ; The Flow A comes from the ES of C ptesis .

B ; The Flow B comes from the outside .

Base ; Its base is behind the eyes , at the level of the " foramen magnum " (" thalamus " , interthalamus " , " fornix " , ...) .

AS ; The back of the skull , almost at the very top .

BW ; The Big Whirls are the big ~ "spheroïdo-plates " of the rear of the skull . (" parietal bone ")

Anaclase ; The marked angle and hardness of the Anaclase is Behind the ear .

EE ; The Edges External are slightly more inside the skull than those of skull C4 (which makes everything which is " temporal ") . There is a little space between the two , therefore on the Exterior of the skull , below and beside the eyes ; ~ 1 or 2 cm .

Flame ; The Top of the Flame is at the rear of the skull , almost at the very top . Then it descends into the skull . The crossing of the " threads " of the eyes (" optic chiasma ") is the crossing of the EE of the Flame of skull C5 which does its Nucleus . This is the bottom of the Flame , this is where begins the Nucleus .

ES ; When the Exit of Sup. of Skull C5 makes itself , the Flame ignites , the Nucleus Charges , the eyes open , and the Orgonome awakens .

Nucleus ; Its Nucleus forms the eyes . The Nucleus is pushed forward by the ES . The " muscles " of the upper and lower eyelids are the EE of these Nucleus Wings . The iris/pupils/cornea etc. are like a " sagittal section " of the EE of these Nucleus Wings , visible when these EE Expand themselves , elongate , when they are activated by the Flame , by Charge of Skull Core 5 , and therefore visible and activated by the Expansion of the Superposition of the Flows A×B .

If all this is true , the eyes are the Exit of Superposition of Skull C5 , which can therefore elongates itself when it makes itself , and the " material " eyes , within the " eyeball " , would be a bit like a " sagittal section " of the EE of the Nucleus Wings of skull C5 . Also , this ES , would be an Exit of the orgonome , there would be nothing that enters inside . Also , the e. of the sight , therefore would be sensitive (Which explains why we often have pain from what we see , etc.)

This ES has three curves , like all ES (first , erection , final recurve) . If it can elongate itself , it can also retract . Eyes closed ; this is the retraction of the ES of skull C5 .
If nothing enters within the Nucleus , that this ES is still a thrust toward the outside , we could say that the sight is a thrust of a Core , which makes some place for itself in a world of sight , like the push of an obstacle to reach a real world , absolutely visible world .

There is still a visible Core " within " the skull a little more behind (the Core " cerebellum ") , then the Cores ribs begin in Continuation of them .

(the term « Crane C5 » has been shifted ; it is no longer the jaw , but it is at the rear of Skull C4 (nose/forehead) . (The Core jaw is skull C3 (big smile/pomettes) .) .) .

Flow A comes from the vertebral column and makes the " fornix " .

Hypophysis has the same shape as the sphenoid sinus and the eyes . It is behind the beginning of the sphenoid sinus , it is below the optic nerve .

Carotid arrives precisely at the Base of the N . But at the exterior of the Flame .

The ES is the same dj. believe .

The cerebral vein begins between the Flow A and the start of the EE (choroid plexus)

The pineal gland with the Tectal lamella is on the path of the Flow A (it must be mobile) .
(To allow it to pass , regulate it or block it . (Activate the Sup. (to wake up oneself) , reduce it or increase it (to think/reflect/attract the Flow B / to let the Flow B leave) , deactivate the Sup. (to fall asleep oneself)) .

Lil ; Lil's membrane is under the Flow B (which arrives between it and the lamella terminalis , passing through the bottom of the Nucleus (the one of the eye , of the nose , " optic chiasm " & " hypophysis ") .

The Arteries arrive at the exterior of the Flows A and B .
Internal cerebral artery ; at the exterior of the Flow A .
Basilar artery ; at the exterior of the Flow B .

Jaw (" Mandible ") is the same than C2 (big smile / cheekbone)
(its BW comes to rest under zygomatic bone at the front O.)
Its BW,EE,Top " digs " the entire " zygomatic arch " . It is the rear part of the arch and below " zygomatic " (this one has no rupture/breach viewed from below (just in the middle in lateral view) .

Its Anaclase is the " Coronoid process " .

When C2 (big smile / cheekbone / jaw) Charge itself , the jaw opens .)
Its BW,EE,Bottom is the " mandibular incisure " .

This " coronoid process " is a scale of the pulsation of C2 (big smile / cheekbone / jaw) .
When it is very high (the Anaclase is very high) , C2 is Discharged (the Wings are " folded " , the BW is " swollen " in width , but not in length , like a " bag " .
When it is very low (the Anaclase til the middle (of the " mandible ") , C2 is Charged , the Wings are unfolded/ stretched .

It is possible that the " glabella " is the Bottom of the C4 Flame (which begins at the line that descends along the nose , under the eye) , that the entire periphery of the eye , the "socket/orbit" , is the EE of this Flame , and that the Top of this Flame passes really in front of the " glabella " (as described)

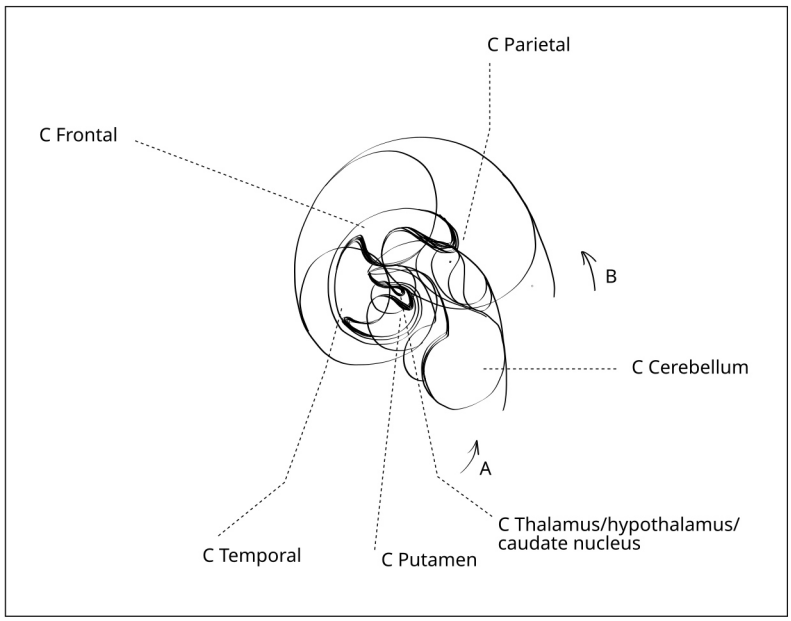
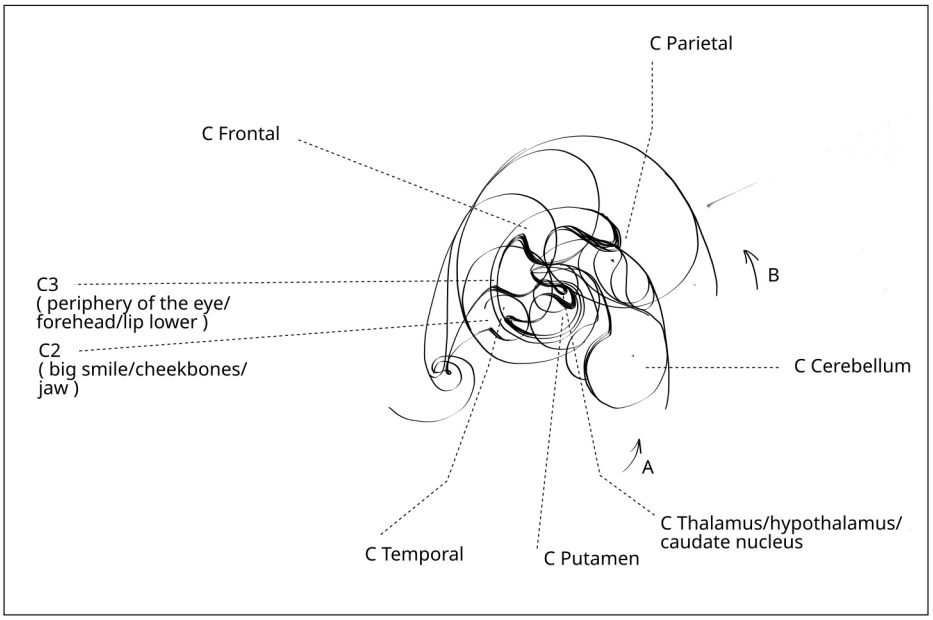
LG AO skull e.g. monkeys/lemurs ...

There is the " bald monkey " (" red-faced monkey ") which has a C at the level of the eye .
From Sup. interthalamus , whose the BW form the Top of the forehead , then the Flame is clearly visible along the forehead , encompasses the eyes while descending , then returns towards the axis , making the under of the sockets/orbits , then ascends to the nose .

There are some monkeys whose the Flame of the skull parietal is visible by the color of the hair (black) , and goes as far as the BW of the precedent Core (in the Continuation of the Sup. interthalamus .) .



The two exist at the level of the eye . Both the Temporal and the Frontal (whose the BW begins behind the eyes) , that the one whose BW encompass them (and whose Anaclase makes the zygomatic arch) .
The two Sup. are present at this place . The one of the " Foramen magnum /interthalamus " (end of the " vertebral column ") , that of the tongue/mouth/muzzle (skull C2 (big smile/cheekbones/jaw) , skull C3 (periphery of the eye/forehead/lip lower) .
(skull C3 , as already described , exists in many many monkeys/lemurs etc. , But the level of its Anaclase , and therefore of the BW , and therefore of the zygomatic arch , varies (most often , above the eye socket/orbit , contrary to the H-S .) .) .



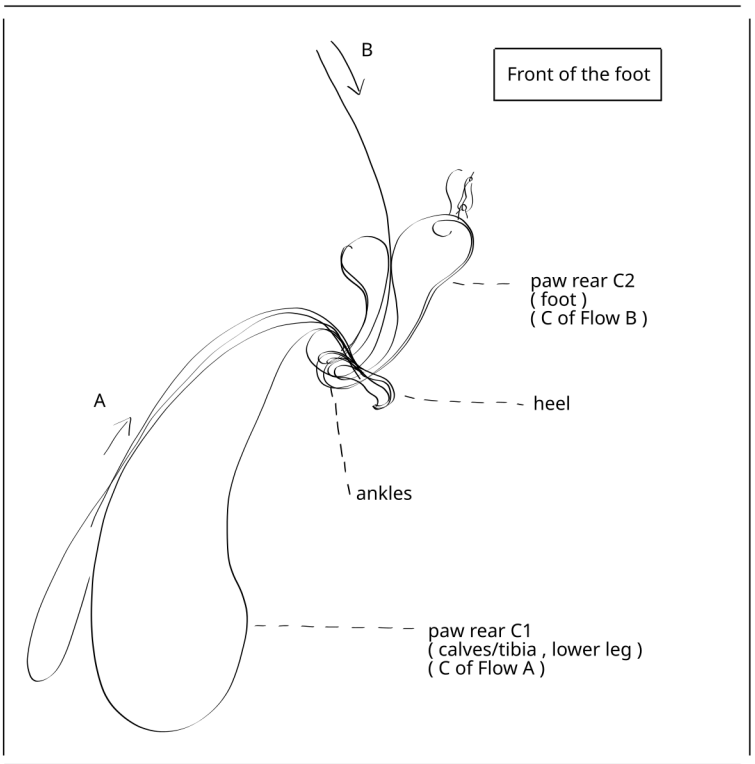
LG AO bird paw/legs

In the birds , it would maybe the ES of the legs that forms the hind toe , the rear finger , the 4th . (idem than in H-S , the heel , which is the ES of the lower leg (paw Core tibia/calf) (& idem than the thumb for the Core of the hand ?) .

LG AO paw " rear legs " / " hindlegs " (legs) e.g. H-S

The " rear legs " in H-S are formed by the ES of the BW of the pelvis (their " patellae " (ES) are at the intersection of the ES of the pelvis of the male and the BW of the pelvis of the female . From there , the first bone which is formed by this ES is the " femur " , it is Flow A which goes to do the very first Core of the leg (paw rear Core 0 (femur/upper leg)) .

LG AO paw rear (legs) Core 0 (femur / upper leg) , Core 1 (tibia / lower leg) , Core 2 (foot) e.g. H-S



paw rear Core 0 (femur / upper leg)

The bone which is formed by the ES of the BW of the male/female pelvis C3 ("pelvis/illium/ischium") is the " femur " (paw rear Core 0 (femur/leg top)) .
It takes its first curve (the one in the same direction than the previous Sup.) depending on whether the Flow of the previous Sup. is the one of the male or the female . Either the paw is formed by the " pelvis/illium " of the female (female pelvis C2) , either the paw is formed by the " ischium " of the male (male pelvis C2) .
This first curve is different for the two sexes . For the male , it goes towards the rear of the Orgonome (of the body) and towards the interior of the body . For the female, it goes towards the rear of the the Orgonome (of the body) and towards the exterior of the body . This determines the two following curves of the ES of the previous Superposition , of this Flow , and the " knees " and the " patellae " .
Therefore the final recurve that goes to do the next Sup. is similar to the original curve ; for the male , towards the interior (the visible axis of the " knee " is towards the exterior .) , for the female , towards the exterior (the visible axis of the " knee " is towards the interior .) .

A ; The Flow A comes from the Exit of Sup. of the BW of the male/female pelvis C3 ("pelvis/illium/ischium") .

B ; The Flow B comes from the exterior , from the rear of the Orgonome .

Base ; The Base is the " patella " , the " knee " , where the Sup. A×B makes itself .

EE ; The EE form all the exterior of the " femur " / upper leg , at the rear of the Orgonome .

BW ; The BW are in the thighs , and extend to the pelvis and " buttocks " .

Flame ; The Flame is long and thin . Its top is at the pelvis .

ES ; The Exit of Sup. forms the paws rear Core 1 (tibia / lower leg) .

Nucleus ; In the " knee " .

paw rear Core 1 (tibia / lower leg)

A ; The Flow A comes from the paw rear Core 0 (femur / upper leg) (it is its ES) .

B ; The Flow B comes from the exterior of the Orgonome , it is the Flow A of the paw rear Core 2 (foot) .

Base ; The Base is the ankle/astragalus , where the Sup. of A×B makes itself .

EE ; The bottom of the EE is at the ankle/astragalus , the Top of the EE is under the calves .

Anaclase ; The Anaclase is under the calves , at the rear of the Orgonome , on both exterior sides of the " tibia " / lower leg .

BW ; The BW of the Cores paw rear Core 1 (tibia / lower leg) are the calves .

Flame ; The Flame is long and thin , its maximum width is at the ankle .

ES ; The Exit of Sup. of the paw rear Core 1 (tibia / lower leg) is the same as than paw rear Core 2 (foot) , which forms the heel .

Nucleus ; The Nucleus is in the ankle , its Wings are pushed (towards the rear of the Orgonome) by The ES , around the heel . (But on the other side of the axis of the 3 curves of the ES than the Wings of the Nucleus of Core 2 (foot) .) .

paw rear Core 2 (foot)

paw rear Core 2 (foot) is not formed by the Exit of Sup. of paw rear Core 1 (tibia / lower leg) but it is formed by a Flow coming from the exterior , coming to Superpose itself with the Exit of Sup. of paw rear Core 1 (tibia / lower leg) . (This explains the obvious inversion of curves between the foot and the rest of the leg .)

A ; The Flow A comes from the exterior of the Orgonome . It is the Flow B of paw rear Core C1 (tibia / lower leg) .

B ; The Flow B comes from the interior of the Orgonome , it is the Flow A of the paw rear Core 1 (tibia / lower leg) (which is the Exit of Sup. of paw rear Core 0 (femur/upper leg) .) .

Base ; The Base is the ankle/astragalus , where the Sup. of A×B makes itself .

EE ; The Bottom of the EE is at the ankle/astragalus , the Middle and Top of the EE does all the exterior sides of the foot up to the ~ " cheekbones " (BW) .

Anaclase ; The Anaclase is the angle , marked and hard (like all Anaclases) on the exterior sides of the foot under the ~ " cheekbones " (this makes the " dead skin " under the foot , the thick and hard skin , the " callosity " (LAT.; Callum) .

BW ; The BW are the two ~ " cheekbones " at the front and under the foot (more or less " swollen " , " supple " or " taut " (like all BW) .) .

Flame ; The Flame is the " sole of the foot " . Its Top is at the front of the foot between the two ~ " cheekbones " , its bottom is in the ankle , where its EE cross thenselves to do the Nucleus .

ES ; The Exit of Sup. of the paw rear Core 2 (foot) forms the heel (like Calabria is the ES of Italy .) , (hence its " strange " and almost pointed appearance in H-S . It has the 3 curves)

Nucleus ; The Nucleus is in the ankle , its Wings are pushed forward the Core (towards the rear of the Orgonome) by the ES , around the heel .

LG AO H-S paws " front " (arms)

The paws " front " in H-S are formed by the ES of the BW of the pelvis C3 (chest/tors o) of the Flow male (male pelvis C3,BW,ES) (at the level of the Top of the chest , at the rear) . This ES of BW makes itself under the Core ptesis , and therefore under the EE of its Wings and just next to the Anaclase of its Wings (the " acromion " , the " shoulder ") .
(The ES of the BW of the pelvis C3 of the Flow female is the breast/nipples/milk etc. . It is different , lower , on the front of the Orgonome , etc. , and therefore cannot participate at the formation of these paws . Only the Flow male forms them .
Thus , their curves make the same direction in both sexes . But since the Flow male is less strong in the female , her male pelvis C3 (chest/torso) is smaller , weaker (But this Flow male really exist , otherwise this Core wouldn't have formed itself) . Being weaker , the ES of the BW of this Core is weaker than that the one of the male . Females therefore have some " arms " where it less circulate , where it is less strong , where it is less active . And so , the erection of its second curve (the erection) (the " biceps ") is less marked/pronounced (As are the Wings of the Core formed by this ES of the previous Sup. (the " muscles " of the " arm ")) . (At the same level of the body , there is C ptesis just above (around these " arm patellae " (of the " humerus " in the " shoulders ") . This C ptesis , it , is the same for both the male and for the female) . The female therefore has logically , the shoulders with the same strength/circulation/activity than the shoulders of the male .

From the Contraction/activation of the humerus of the arm , we can easily see that the ES of its following Superposition , the one that forms the forearm , the " cubitus " , makes itself just beside to its Flow A (the " biceps "/humerus) . (The hard line of the " biceps " dips towards the elbow (towards the rear/back of the H-S Orgonome , rotates " around " the elbow (the Sup.) , then emerges towards the front/belly of the H-S Orgonome (ES)) .
This ES therefore has , for first curve , the same direction as this dip of the biceps into the elbow . This hard line is the " cubitus " , the Flow A of the forearm , in its active/circulating/strong state .
(For dj. , there is a space of ~1.5cm between the A of the paw front Core C0 (humerus , upper arm) , and the A of the paw front Core C1 (cubitus , forearm) , which is its Exit of Superposition (ES) .

LSRL femme (EN.; woman) following gine

Gine (" woman " in Greek) comes primarily from Gonos in Greek (" gene/generation ") but also from Gonu (" knees " (FR.; " genoux ") . (because " Gonu "(knees) and " generation " have in common the same location of the body ; the lower one . They have the same origin , are written almost identically , and both refer to woman .)

GR. ; γυνα ; woman , girl , female , etc. (opposite of ' ανδρον ' ; male) (EN. ; ´ androgine ´ , ´ gynecologist ´ , ´ origin ´ , etc.) .

GR. ; γυνή gén. γῠναικός ; woman (1) ; as opposed to man, regardless of age or status ; married or not. (2) ; woman, wife (3) ; mortal woman , as opposed to goddess . II female of the animals . Arstt. Pol. 2.3, end ; Ath..559 a . double decl. ; 1 ; ... 2 ... cf. ; SKR. ganā , jánī , etc. ; theme in αιχ proper to GR. .

GR. ; γόνος , ου (o , but see below) ; I (1) ; act of engendering, generation, procreation (2) ; genital semence . II (passive) That which is engendered (1) ; son, daughter, child (2) ; sex (3) ; origin , birth ||>>>>--> fem. in sense II . 1 ἡ γόνος . EUR. I.A.794 , the girl. ion. γοῦνος ARÉT. Caus. M. diut.2.5 (cf. ; γονη , γίγνομαι) . (end)
GR. ; γονή , ῆς (ἤ) ; A I act of engendering , (1) ; act of generation (2) ; childbirth II That which engenders, Hence (1) ; semence , germ (2) ; organs of the generation , particularly the mother's breast . B That which is engendered (1) ; child , descendant (2) ; descendance/lineage, race, family . III birth (1) ; from birth (2) ; with idea of nationality , of location of origin . IV with idea of duration, generation, adult age .

GR. ; γουνο-παχής , ής , ές [α] ; with thick knees .
GR. ; γόνυ , gén. γόνατος (τὸ) ; I knee (1) ; to denote strength (2) ; the resting II Knot of a stem , point of cessation of its annual growth , in speaking of the reed etc. (LAT. ; geniculum) ||>>>>--> decl. ... acc. γοῦνα Il. 8.371 ; ON. 18,395 (cf. ; LAT. ; gēnu SKR. ; jānu , etc. ιγνύξ)
GR. ; γουνός ; v. γονυ
GR. ; γοῦνος ; v. γόνος , end .

= exactly as " femme " (EN. ; woman , female) comes from Femis in Greek (" famous/renown/rumor/opinion/omen/oracle/conversation/affirmation ") , but especially from Femur in Latin (" femur/thigh/leg/lower part of the body ") .

GR. ; φημις , ιος (accent ^ on η) ; (1) ; conversation , discussion , (2) ; voice , hence ; the will . (3) ; renown/reputation (good or bad) .
GR. ; φήμη , ης (ἡ) ; I That which is shown (1) disclosure, revelation by word or by sign, warning from the gods, augury, omen, oracle ... . II that which is announced by speech/voice , hence (1) ; noise, rumor (ESCHN. 1,127;2,145; Paus. 1,17,1 ; HDT. 9,100 AR.EQ. 1320 ; THC. 1,11 ; PLAT. Leg. 672 b , Ap. 18c) . (2) ; Reputation , opinion about a person's character , good or bad . (3) ; tradition, legend (4) ; saying , proverb (5) ; message (6) ; praise, eulogy , hence ; glory , fame .
GR. ; φήμη , ης (ἡ) ; Fame personified . Plut. Cam. 30 , etc. (s. the prec.)
GR. ; φημι , φής , φησι , φαμεν , φατε , φασι ; I To make visible , manifest a thought through speech (1) ; when speaking of a public rumor , of a tradition (2) ; to summarize someone's speech . II To give one's opinion , hence ; to have an opinion, to think , to believe . III To say, to claim , to boast of . IV To say yes (1) ; to affirm , to declare (2) ; to admit , to agree to. ... (1) ; to utter a word, to announce a news (2) ; to give one's opinion , hence ; to believe , to think .
GR. ; φημιζω (ao. ἐφήμισα ; (1) ; to prophesy, to announce . (2) ; to spread a rumor, to divulge . (3) ; to designate by a name, to name, to call , (4) to promise .

LAT. ; " femora , feminis " ; femur , thigh , lower body , etc. .

=

femur (leg) -> femme (woman , female)
genoux (knee) -> gine (woman , female)

= In Greek , as in Latin , it was still the man who named the woman with the name of the lower part of his own body , of his pelvis .

e.g. cornuatus ; The opposite of " man " is still " nam " . The opposite of " male " is still " elam " (FR. ; the opposite of " homme " is still " emmoh " .) .
